

Parser has determined that the program you are viewing/editing is not in Easytrieve Plus format. Syntax check is suppressed.

Currently, syntax check is available for Easytrieve Plus source only. Other files and programming languages can be edited but not syntax checked.

In general, files that end with .ezt, .ezx, .jcl and files without file type are scanned for valid Easytrieve Plus statements.

Files of type .cpy are treated as Easytrieve Plus macros. Macros do not qualify for syntax check until they are used in Easytrieve Plus program(s).
