

**R19 EM64T Technology Lab
by Saleem Akhtar, IBM**

Come experience this hands-on opportunity to learn about this exciting new technology from IBM & Intel. Will current 32 bit software run on these new EM64T processors? If so, how well when compared to todays 32 & 64 bit processors? What additional hardware options enhance the capability of these systems? Hopefully when you leave this session you will understand why IBM xSeries believes this technology allows for a much smoother transition to 64 bit enabled environments.
