

TOC**INDEX****VIEW****S05 Overview of the IBM Grid Toolbox V3 for Multiplatforms
by Andy Gangone**

The IBM Grid Toolbox V3 for Multiplatforms, announced 12/03, is a comprehensive, integrated toolkit for creating and hosting grid services. This IBM product includes material developed by the Globus Alliance as well as a set of APIs and development tools to create and deploy new grid services and grid applications. It also includes a limited integrated hosting and development environment, capable of running grid services and sharing them with other grid participants, such as grid service providers and grid service consumers. It also provides a set of tools to manage and administer grid services and the grid hosting environment, including a Web-based interface, the Grid Services Manager.
