

V00 Building a Cluster**by Dwain Sims-LAB, Steeleye**

The LifeKeeper Technical Training session is an 75-minute class covering the concepts, installation, configuration, and administration of LifeKeeper with IBM xSeries and BladeCenter Servers. It includes hands-on lab exercises to reinforce the content. Participants will be able to build and configure a cluster using SteelEye LifeKeeper on IBM BladeCenter Servers connected to a FAStT 200. We will set up both a Linux and a Windows cluster.

Participants attending this session will also receive a self-guided, DVD-based workshop. This DVD provides additional training on LifeKeeper.
