

# ***IBM Worklight V6.0.0 Getting Started***

## Using Worklight API in native Java ME applications

## Trademarks

- IBM, the IBM logo, and ibm.com are trademarks or registered trademarks of International Business Machines Corporation, registered in many jurisdictions worldwide. Worklight is a trademark or registered trademark of Worklight, an IBM Company. Other product and service names might be trademarks of IBM or other companies. A current list of IBM trademarks is available on the Web at “[Copyright and trademark information](http://www.ibm.com/legal/copytrade.shtml)” at [www.ibm.com/legal/copytrade.shtml](http://www.ibm.com/legal/copytrade.shtml).
- Java and all Java-based trademarks and logos are trademarks or registered trademarks of Oracle and/or its affiliates.
- Other company products or service names may be trademarks or service marks of others.
- This document may not be reproduced in whole or in part without the prior written permission of IBM.

## About IBM®

- See <http://www.ibm.com/ibm/us/en/>

# Agenda

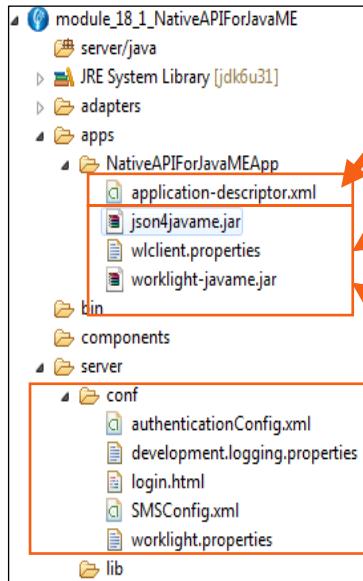

- Creating a Worklight® Native API
- Create and configure a Java™ ME Native application
- Initializing WLClient
- Invoking a Worklight Procedure
- Receiving a Procedure response
- For BlackBerry

## ***Creating a Worklight Native API (1 of 3)***

- IBM Worklight® provides the ability for Java™ Platform, Micro Edition (Java ME) applications to communicate with a Worklight Server by using Worklight native API library.
- To serve Java ME application, Worklight Server must be aware of it.
- The IBM Worklight native API is located in the **apps** folder of your Worklight project.
- The IBM Worklight native API folder serves two purposes:
  - It contains a native API library and configuration file that must be copied to your Java ME project
  - It contains the application-descriptor.xml file, which can be deployed to a Worklight Server to serve as an entry point
- In this module, you learn how to create a Worklight native API and use its components in your Java ME application.

## Creating a Worklight Native API (2 of 3)

- A Worklight Native API contains several components:

The **application-descriptor.xml** file is used to define the application metadata and to configure the security settings to be enforced by Worklight Server.

The **wlclient.properties** file contains the connectivity settings to be used by a native Java ME application. You must copy this file to your native Java ME project.

The **worklight-javame.jar** and **json4javame.jar** files define the Worklight API library that you must copy to your native Java ME project.

Like any other Worklight project, you define the server configuration by modifying the files in the **server\conf** folder.

## ***Creating a Worklight Native API (3 of 3)***

1. In Worklight Studio, create a Worklight project, and add a Worklight Native API.
2. In the New Worklight Native API dialog, enter your application name, and select **JavaME** for the **Environment** field.
3. Build and Deploy your Worklight Native API.

# Agenda

- Creating a Worklight® Native API
- Create and configure a native Java™ ME application
- Initializing WLClient
- Invoking a Worklight Procedure
- Receiving a Procedure response
- For BlackBerry

## *Create and configure a Java™ ME Native application*

1. Create a native Java ME application.
2. Copy the **worklight-javame.jar** and **json4javame.jar** files from the Worklight Native API folder to the native Java ME application, under the **/lib** directory.
3. Copy the **wlclient.properties** file from the Worklight Native API folder to the new native Java ME application under the **/res** directory.

# Agenda

- Creating a Worklight® Native application
- Create and configure a Java™ ME Native application
- Initializing WLClient
- Invoking a Worklight Procedure
- Receiving a Procedure response
- For BlackBerry

## Initializing WLClient

- Start by creating an instance of **WLClient**.

```
private WLClient client;  
  
public JavaMENativeApp() {  
    client = WLClient.createInstance(this);  
    this.display = Display.getDisplay(this);  
}
```

- To establish the connection to a Worklight Server, use the **connect** method, and specify a **MyConnectListener** class instance as the parameter.

```
public void commandAction(Command command, Item item) {  
    StringItem itemName = (StringItem)item;  
    if(itemName.getText().equals("1.Connect")) {  
        updateTextView("\nConnecting...");  
        client.connect(new MyConnectListener());  
    }  
}
```

- See next slides to learn how to create it.

## *MyConnectListener*

- The **WLClient** instance first connects to the Worklight Server, following the properties of the **wlclient.properties** file.
- After the connection is done, it calls one of the methods of the **MyConnectListener** class.
  - The **MyConnectListener** class implements the **WLResponseListener** interface.

```
public class MyConnectListener implements WLResponseListener {
```

- The **WLResponseListener** interface specifies the following methods:
  - **public void onSuccess (WLResponse response) { }**
  - **public void onFailure (WLFailResponse response) { }**
- Use these methods to process connection successes or failures.

## Agenda

- Creating a Worklight® Native application
- Create and configure a Java™ ME Native application
- Initializing WLClient
- Invoking a Worklight Procedure
- Receiving a Procedure response
- For BlackBerry

## Invoking a Worklight Procedure (1 of 3)

- After the connection is established with a Worklight Server, you can use the WLCClient instance to call the adapter procedures:

```
}else if(itemName.getText().equals("2.Invoke Procedure")) {  
    updateTextView("\nInvoking procedure...");  
    String adapterName = "RSSReader";  
    String procedureName = "getFeedsFiltered";  
  
    WLProcedureInvocationData invocationData = new WLProcedureInvocationData(adapterName, procedureName);  
  
    Object[] parameters = new Object[] {};  
    invocationData.setParameters(parameters);  
  
    WLRequestOptions options = new WLRequestOptions();  
    client.invokeProcedure(invocationData, new MyInvokeListener(), options);  
}
```

- Create a WLProcedureInvocationData object with the adapter and procedure names.

## Invoking a Worklight Procedure (2 of 3)

- After the connection is established with a Worklight Server, you can use the WLCClient instance to call the adapter procedures:

```
}else if(itemName.getText().equals("2.Invoke Procedure")) {  
    updateTextView("\nInvoking procedure...");  
    String adapterName = "RSSReader";  
    String procedureName = "getFeedsFiltered";  
  
    WLProcedureInvocationData invocationData = new WLProcedureInvocationData(adapterName, procedureName);  
  
    Object[] parameters = new Object[] {};  
    invocationData.setParameters(parameters);  
  
    WLRequestOptions options = new WLRequestOptions();  
    client.invokeProcedure(invocationData, new MyInvokeListener(), options);  
}
```

- Add the required parameters as an Object array, and set the request options.

## Invoking a Worklight Procedure (3 of 3)

- After the connection is established with a Worklight Server, you can use the WLCClient instance to call the adapter procedures:

```
}else if(itemName.getText().equals("2.Invoke Procedure")) {  
    updateTextView("\nInvoking procedure...");  
    String adapterName = "RSSReader";  
    String procedureName = "getFeedsFiltered";  
  
    WLProcedureInvocationData invocationData = new WLProcedureInvocationData(adapterName, procedureName);  
  
    Object[] parameters = new Object[] {};  
    invocationData.setParameters(parameters);  
  
    WLRequestOptions options = new WLRequestOptions();  
    client.invokeProcedure(invocationData, new MyInvokeListener(), options);  
}
```

- Specify a MyInvokeListener class instance as a parameter.
  - See next slides for how to define such an instance.

# Agenda

- Creating a Worklight® Native application
- Create and configure a Java™ ME Native application
- Initializing WLClient
- Invoking a Worklight Procedure
- Receiving a Procedure response
- For BlackBerry

## Receiving a Procedure response (1 of 3)

- After the procedure call completes, the **WLClient** instance calls one of the methods of the **MyInvokeListener** class.
- The **MyInvokeListener** class implements the **WLResponseListener** interface

```
import com.worklight.wlclient.api.WLFailResponse;  
import com.worklight.wlclient.api.WLResponse;  
import com.worklight.wlclient.api.WLResponseListener;  
  
public class MyInvokeListener implements WLResponseListener {
```

- The **WLClient** calls its **onSuccess** or **onFailure** methods (see next).

## Receiving a Procedure response (2 of 3)

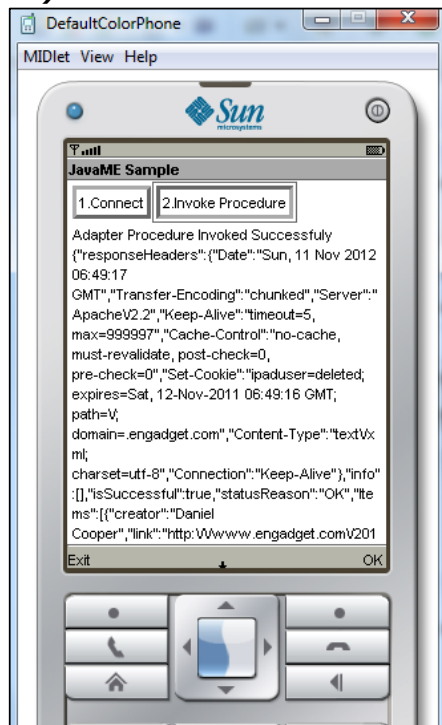

- If the procedure call is successful, the **onSuccess** method of the **MyInvokeListener** instance is called.
- Use it to get the data that is retrieved from the adapter.

```
public class MyConnectListener implements WLResponseListener {  
    public void onSuccess(WLResponse response) {  
        String responseText = response.getResponseText();  
        JavaMENativeApp.updateTextView("Connected Successfully\n" + responseText);  
    }  
  
    public void onFailure(WLFailResponse response) {  
        String responseText = response.getResponseText();  
        JavaMENativeApp.updateTextView("Connection Failure\n" + responseText);  
    }  
}
```

- The **response** object contains the response data.
  - You can use its methods and properties to retrieve the required information.

## Receiving a Procedure response (3 of 3)

- The sample for this training module can be found in the Getting Started page of the IBM Worklight documentation website at <http://www.ibm.com/mobile-docs>
- The sample contains two projects:
  - **NativeAPIForJavaME.zip** contains a Worklight Native API to be deployed to your Worklight Server.
  - **JavaMENativeApp.zip** contains native Java ME application that uses Worklight native API library to communicate with Worklight Server.
- **Important:** Make sure to update the **wlclient.properties** file in the JavaMENativeApp with the server settings that are relevant to you.

# Agenda

- Creating a Worklight® Native application
- Create and configure a Java™ ME Native application
- Initializing WLClient
- Invoking a Worklight Procedure
- Receiving a Procedure response
- For BlackBerry

## For BlackBerry

- Use the **createInstance(String connectionString, MIDlet midlet)** method for BlackBerry to create the **WLCClient** instance.
- BlackBerry has different ways to make network (HTTP or Socket) connection.
  - To identify the type of network connection that you use to connect to Worklight Server, pass the appropriate string argument to the **createInstance(String connectionString, MIDlet midlet)** method.
    - For example: `deviceside=true`
  - For more information, see the BlackBerry Developers Knowledge Base, at:
    - [http://www.BlackBerry.com/knowledgecenterpublic/livelink.exe/fetch/2000/348583/800451/800563/What Is - Different ways to make an HTTP or socket connection.html?nodeid=826935&vernum=0](http://www.BlackBerry.com/knowledgecenterpublic/livelink.exe/fetch/2000/348583/800451/800563/What%20Is%20Different%20ways%20to%20make%20an%20HTTP%20or%20socket%20connection.html?nodeid=826935&vernum=0)

## Privacy Policy Considerations

- IBM Software products, including software as a service solutions, ("Software Offerings") may use cookies or other technologies to collect product usage information, to help improve the end user experience, to tailor interactions with the end user or for other purposes. In many cases no personally identifiable information is collected by the Software Offerings. Some of our Software Offerings can help enable you to collect personally identifiable information. If this Software Offering uses cookies to collect personally identifiable information, specific information about this offering's use of cookies is set forth below.
- Depending upon the configurations deployed, this Software Offering may use session cookies that collect session information (generated by the application server). These cookies contain no personally identifiable information and are required for session management. Additionally, persistent cookies may be randomly generated to recognize and manage anonymous users. These cookies also contain no personally identifiable information and are required.
- If the configurations deployed for this Software Offering provide you as customer the ability to collect personally identifiable information from end users via cookies and other technologies, you should seek your own legal advice about any laws applicable to such data collection, including any requirements for notice and consent. For more information about the use of various technologies, including cookies, for these purposes, see IBM's Privacy Policy at <http://www.ibm.com/privacy>, and IBM's Online Privacy Statement at <http://www.ibm.com/privacy/details> the sections entitled "Cookies, Web Beacons and Other Technologies" and the "IBM Software Products and Software-as-a-Service Privacy Statement" at <http://www.ibm.com/software/info/product-privacy>.

# Support and comments

- For the entire IBM Worklight documentation set, training material and online forums where you can post questions, see the IBM website at:
  - <http://www.ibm.com/mobile-docs>

## Support

- Software Subscription and Support (also referred to as Software Maintenance) is included with licenses purchased through Passport Advantage and Passport Advantage Express. For additional information about the International Passport Advantage Agreement and the IBM International Passport Advantage Express Agreement, visit the Passport Advantage website at:
  - <http://www.ibm.com/software/passportadvantage>
- If you have a Software Subscription and Support in effect, IBM provides you assistance for your routine, short duration installation and usage (how-to) questions, and code-related questions. For additional details, consult your IBM Software Support Handbook at:
  - <http://www.ibm.com/support/handbook>

## Comments

- We appreciate your comments about this publication. Please comment on specific errors or omissions, accuracy, organization, subject matter, or completeness of this document. The comments you send should pertain to only the information in this manual or product and the way in which the information is presented.
- For technical questions and information about products and prices, please contact your IBM branch office, your IBM business partner, or your authorized remarketer.
- When you send comments to IBM, you grant IBM a nonexclusive right to use or distribute your comments in any way it believes appropriate without incurring any obligation to you. IBM or any other organizations will only use the personal information that you supply to contact you about the issues that you state.
- Thank you for your support.
- Submit your comments in the IBM Worklight forums at:
  - <https://www.ibm.com/developerworks/mobile/worklight/connect.html>
- If you would like a response from IBM, please provide the following information:
  - Name
  - Address
  - Company or Organization
  - Phone No.
  - Email address

***Thank You***
