About IBM®

- See <http://www.ibm.com/ibm/us/en/>

Agenda

- About this task
- Before you begin
- Known limitations
- Explore the Flight Ticket sample

About this task

- The Flight Ticket sample app is a hybrid sample application that illustrates an end-to-end scenario. Hybrid applications consist of an application that is developed with web technologies such as HTML, CSS, and JavaScript™.
 - The JavaScript invocations call into a JavaScript native bridge.
 - The bridge enables hybrid applications to access native device capabilities such as GPS or a camera, and to use native device UI controls and navigation.
- This style of applications enables developers to use their existing web skills without needing to learn to program in other languages such as Objective-C or Java™.
 - It also frees them from writing multiple versions of the same application for various different platforms.
 - A hybrid application tends to have a similar performance and appearance to a pure native application.

About this task

- The Flight Ticket sample app is a business-to-consumer example that demonstrates different capabilities of a hybrid application in an end-to-end scenario.
 - The scenario covers an individual who is making and managing a flight booking.
 - The individual can perform the following activities:
 - Query and book flights
 - Make a payment
 - Cancel a booking
 - Check in
- The code is available as an Eclipse project for Android and as an Xcode project for iOS.

Starting the application server

- Start the service by using the following instructions:
 1. Deploy the **flightticket.war** file that is provided in module_60_4_FlightTicket to an active application server.
 2. Confirm that the FlightTicket application started normally by accessing the URL:
 - `http://<host>:<port>/flightticket/`
- The following message on your browser indicates that the service is started and ready to accept requests:
 - `simple index.html`

Agenda

- About this task
- Before you begin
- Known limitations
- Explore the Flight Ticket sample

Before you begin – Android (1 of 3)

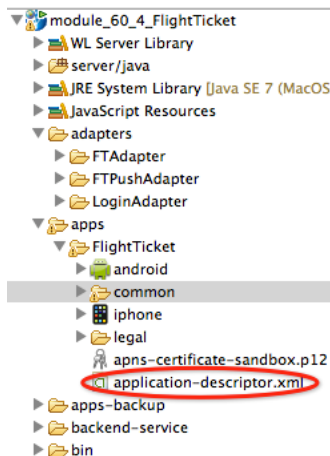

- Import the sample project into Worklight® Studio.
 - Select the **Copy project into workspace** check box.
- Build and deploy the HTTP adapters.
- Build and deploy the Android environment.

- For more information about how to build and deploy the sample, see the following modules:
 - Setting up your Worklight development environment
 - Setting up your Android development environment
 - Adapter framework overview
 - HTTP adapter – Communicating with HTTP back-end systems

Before you begin – Android (2 of 3)

- Enable Push Notification.
 - The Push Notification feature uses the Google Cloud Messaging (GCM) service.
 - Configure the Showcase to use the GCM service as follows:
 - Follow the instructions at <http://developer.android.com/guide/google/gcm/gs.html> to create a GCM sender ID and API key. You might have to create a Google Gmail account.
 - Edit the **application-descriptor.xml** file in the /apps/mysurance folder of the Android project to add the following element:

```
<pushSender key="API_key"
senderId="GCM_sender_ID" />
```

Before you begin – Android (3 of 3)

- Set the **<domain>** and **<port>** element in the **FTAdapter.xml** file and in the **LoginAdapter.xml** file, in the **/adapter** folder of the project.
 - Set the **<domain>** and **<port>** element to the IP address and port of the Application Server where you deployed the **flightticket.war** file.

```
<wl:adapter xmlns:wl="http://www.worklight.com/integration" xmlns:http="http:
    <displayName>FTAdapter</displayName>
    <description>FTAdapter</description>
    <connectivity>
      <connectionPolicy xsi:type="http:HTTPConnectionPolicyType">
        <protocol>http</protocol>
        <domain>localhost</domain>
        <port>9080</port>
      </connectionPolicy>
      <loadConstraints maxConcurrentConnectionsPerNode="2"/>
    </connectivity>
    <procedure name="FlightsREST_getTripFlights"/>
    <procedure name="BookingsREST_bookFlights"/>
    <procedure name="NotificationREST_mobileReadNotifications"/>
    <procedure name="NotificationREST_deleteNotification"/>
    <procedure name="HotelREST_getHotelsByFlightSegmentId"/>
    <procedure name="HotelREST_bookHotel"/>
    <procedure name="HotelREST_getHotelsByCity"/>
  </wl:adapter>
```

Before you begin – iOS (1 of 4)

- Import the sample project into Worklight® Studio.
 - Select the **Copy project into workspace** check box.
- Build and deploy the HTTP adapters.
- Build and deploy the iOS environment.

- See the following modules for how to build and deploy the sample:
 - Setting up your Worklight development environment
 - Setting up your iOS development environment
 - Adapter framework overview
 - HTTP adapter – Communicating with HTTP back-end systems

Before you begin – iOS (2 of 4)

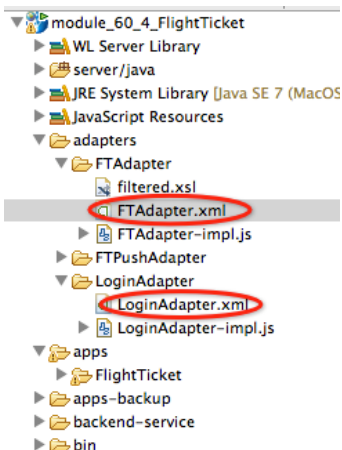

- Enable Push Notification – The Push Notification feature uses the Apple Push Notification service (APNs)
- Configure the Showcase to use APNs as follows:
 - Configure the app for APNs with the iOS Provisioning Portal:
 1. Create an App ID at the iOS Provisioning Portal.
 2. Enable the App ID for APNs.
 3. Generate an App ID-specific client Development Push SSL certificate.
 4. Create an APNs-enabled provisioning profile for the App ID that you created in step 1.
 - Export the APNs SSL Certificate:
 5. Download the certificate that is generated in step 3 onto your MAC.
 6. Double-click the certificate (.cer file) to open it in Keychain.
 7. Expand "My Certificates", and then expand your certificate.
 8. Select the certificate and the private key, and export them as a Personal Information Exchange file with name "**apns-certificate-sandbox.p12**".
 9. Specify a password to protect the certificate.
 10. Save **apns-certificate-sandbox.p12** into the **/apps/FlightTicket** folder of the Worklight project.

Before you begin – iOS (3 of 4)

- Configure Worklight Studio:
 - 11. Update the <ipad> and <iphone> sections in the **application-descriptor.xml** file to specify the password that you chose in step 9.
 - <pushSender password="your_pwd"/>
 - 12. Update the **bundleId** attribute of the <ipad> and <iphone> elements in the **application-descriptor.xml** file to match the App ID that you created in step 1.
- Verify the project settings:
 - 13. Open the project in Xcode.
 - 14. Ensure that the App Identifier matches the App ID that you created in step 1, and that the correct provisioning profiles are used to build and sign the application.

Before you begin – iOS (4 of 4)

- Set the **<domain>** and **<port>** element in the **FTAdapter.xml** file and in the **LoginAdapter.xml** file, in the **/adapter** folder of the project.
 - Set the **<domain>** and **<port>** element to the IP address and port of the Application Server where you deployed the **flightticket.war** file.

```
<wl:adapter xmlns:wl="http://www.worklight.com/integration" xmlns:http="http:
  <displayName>FTAdapter</displayName>
  <description>FTAdapter</description>
  <connectivity>
    <connectionPolicy xsi:type="http:HTTPConnectionPolicyType">
      <protocol>http</protocol>
      <domain>localhost</domain>
      <port>9080</port>
    </connectionPolicy>
    <loadConstraints maxConcurrentConnectionsPerNode="2"/>
  </connectivity>
  <procedure name="FlightsREST_getTripFlights"/>
  <procedure name="BookingsREST_bookFlights"/>
  <procedure name="NotificationREST_mobileReadNotifications"/>
  <procedure name="NotificationREST_deleteNotification"/>
  <procedure name="HotelREST_getHotelsByFlightSegmentId"/>
  <procedure name="HotelREST_bookHotel"/>
  <procedure name="HotelREST_getHotelsByCity"/>
</wl:adapter>
```

Agenda

- About this task
- Before you begin
- Known limitations
- Explore the Flight Ticket sample

Known limitations – Android (1 of 2)

There are some known limitations in the Flight Ticket sample that is running on Android. The following instructions describe how to implement workarounds to these limitations:

- Zooming on Android tablets
 - On Android 3.0+ tablets, the sample is automatically zoomed, which gives a poor user experience.
 - To disable zooming, perform the following steps to set the SDK version to 11 or higher:
 1. Right-click the generated Android project and then **Properties**.

2. Click **Android** in the properties list.
3. Change **Project Build Target** to **Android 3.0** or above and click **OK**.

Known limitations – Android (2 of 2)

4. Edit the **AndroidManifest.xml** file in the root folder of the generated project, to set **android:minSdkVersion** to the API level of the Project Build Target.

```
</application>  
<uses-sdk android:minSdkVersion="15" />  
</manifest>
```

- The style of the buttons is not rendered correctly on Android 2.3 (CSS gradient as the button background is not fully supported on Android 2.3).
- In the **Hotel Details** screen, swiping on the hotel photo might not be fluent on Android devices.
- For more information about known limitations and defects, see the IBM Worklight Information Center.

Known limitations – iOS

- There are some known limitations in the Flight Ticket sample that is running on iOS. The following instructions describe how to implement workarounds to these limitations:
- Screen rotation
 - Apache Cordova disables screen rotation by default
 - To enable free rotation, perform the following step:
 - Edit **CDVMainViewController.m**
 - Update method **shouldAutorotateToInterfaceOrientation** to always return **YES** in the generated native Xcode project.

```
- (BOOL)shouldAutorotateToInterfaceOrientation:(UIInterfaceOrientation)interfaceOrientation
{
    // Return YES for supported orientations
    return (interfaceOrientation == YES);
}
```

- For more information about known limitations and defects, see the IBM Worklight Information Center.

Agenda

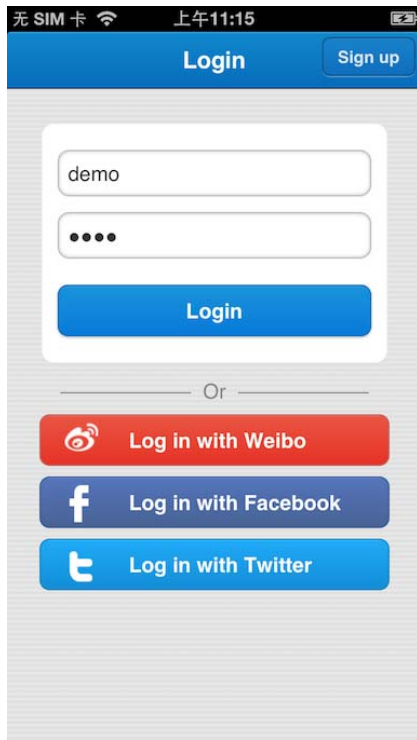

- About this task
- Before you begin
- Known limitations
- Explore the Flight Ticket sample

Explore the sample

- Load the Flight Ticket sample app.
 - The Login screen is displayed.
- Log in to the app:
 - User name = **demo**
 - Password = **demo**
- Click **Login**.
 - A confirm dialog opens that requests to send notification to you if you did not subscribe before.

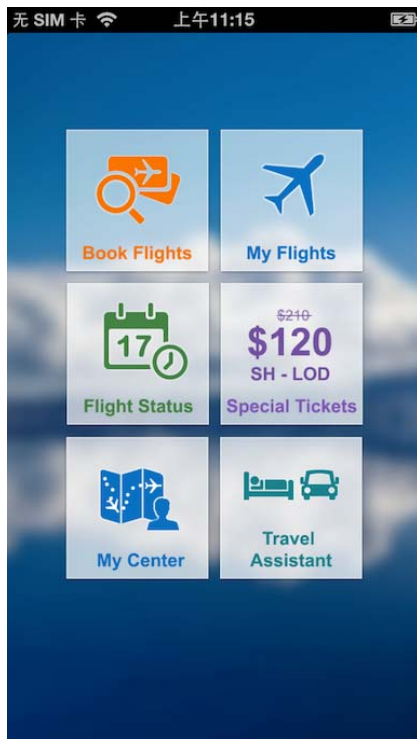

- Tap or click **OK**. An alert is displayed to confirm the subscription.

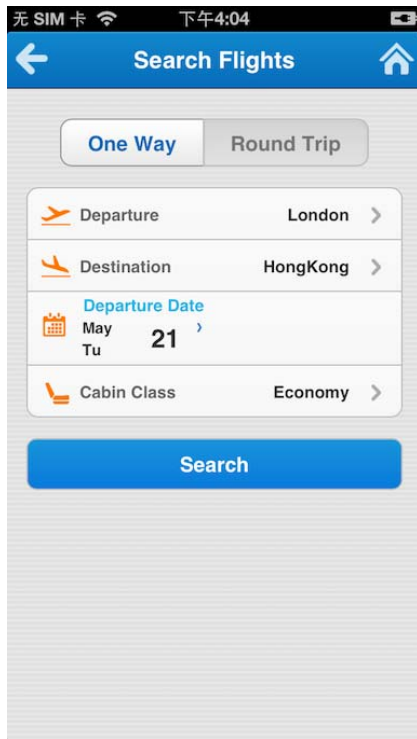

Explore the sample

- Load the Flight Ticket sample app.
 - The main screen is displayed.
- There are six features:
 - Book Flights
 - My Flights
 - Flight Status (not implemented)
 - Special Tickets (not implemented)
 - My Center
 - Travel Assistant

Explore the sample: Book Flights

- Tap or click **Book Flights** on the main screen to begin the flight booking process.
 - The **Search Flights** screen is displayed.
- Tap or click **One Way** or **Round Trip** **Trip**.

Explore the sample: Book Flights

- Tap or click the following search options:
 - **Departure** to set the departure airport
 - **Destination** to set the destination airport
 - **Departure Date** to set the departure date
 - **Return Date** to set the return date
 - **Cabin Class** to set the cabin class

The screenshot shows a mobile application interface for booking flights. At the top, the status bar displays '无 SIM 卡' (No SIM card), signal strength, time '上午11:16' (11:16 AM), and battery level. The app's header is a blue bar with a back arrow, the title 'Search Flights', and a home icon. Below the header, there are two buttons: 'One Way' and 'Round Trip', with 'Round Trip' selected. The main form contains five rows of input fields, each with an icon on the left and a chevron on the right: 'Departure' with an airplane icon and 'London'; 'Destination' with an airplane icon and 'HongKong'; 'Departure Date' with a calendar icon, showing 'May We 22' and a date range indicator '> <'; 'Return Date' with a calendar icon, showing 'May Tu 28'; and 'Cabin Class' with an airplane icon and 'Business'. At the bottom of the form is a large blue button labeled 'Search'.

Explore the sample: Book Flights

- Departure and Destination airports
 - Tap or click **Departure or Destination** to display the **Select Airport** screen.
- The airport list is pre-populated with the most popular airport cities.
 - Tap or click a city to select it.
- Use the **Search** field to search for a hot city.
 - Search text is not case-sensitive: *London*, *LonDON*, or *LONDON* return the same result.

Explore the sample: Book Flights

- Departure and Return dates
 - Tap or click **Departure Date** or **Return Date** to display the date selector.
- Use the date selector roller to set the required departure date or return date.
 - Tap or click **Set** to add the date to the flight search criteria.

The screenshot shows a mobile application interface for booking flights. At the top, the status bar displays '无 SIM 卡' (No SIM card), signal strength, and the time '下午4:17' (4:17 PM). The app's header is blue with a back arrow, the text 'Search Flights', and a home icon. Below the header, there are two buttons: 'One Way' and 'Round Trip'. The main form contains several fields: 'Departure' (London), 'Destination' (HongKong), 'Departure Date' (May 22), 'Return Date' (May 28), and 'Cabin Class' (Economy). At the bottom, there are 'Cancel' and 'Set' buttons. A date selector is open, showing a grid of dates from May 03 to May 07, with the day of the week and the year (2011, 2012, 2013, 2014) displayed next to each date. The date 'May 05 Tue 28 2013' is highlighted.

03	Sun 26	2011
04	Mon 27	2012
05	Tue 28	2013
06	Wed 29	2014
07	Thu 30	

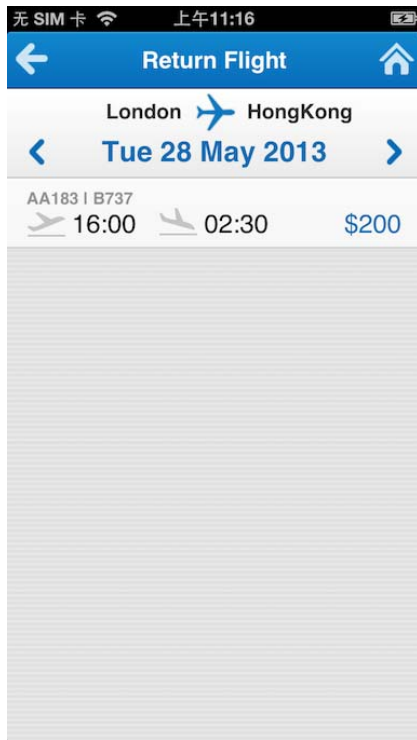

Explore the sample: Book Flights

- Tap or click **Search** on the **Search Flights** screen to begin the flight search.
 - The **Outbound Flight** screen is displayed.
- Tap or click an outbound flight to select it.

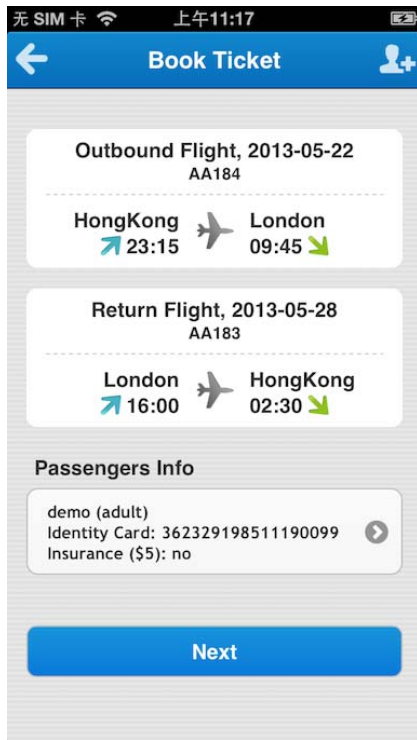

Explore the sample: Book Flights

- If you selected **Round Trip** on the **Search Flights** screen, the **Return Flight** screen is displayed.
- Tap or click a return flight to select it.

Explore the sample: Book Flights

- The **Book Ticket** screen displays the following details:
 - Selected flight information
 - Passenger information
- The Flight Ticket sample is pre-populated with one default passenger details.
- Tap or click the upper right button to add a passenger.

Explore the sample: Book Flights

- Tap or click an existing passenger on the **Book Ticket** screen to update their details or delete the entry.

Privacy Policy Considerations

- IBM Software products, including software as a service solutions, ("Software Offerings") may use cookies or other technologies to collect product usage information, to help improve the end user experience, to tailor interactions with the end user or for other purposes. In many cases no personally identifiable information is collected by the Software Offerings. Some of our Software Offerings can help enable you to collect personally identifiable information. If this Software Offering uses cookies to collect personally identifiable information, specific information about this offering's use of cookies is set forth below.
- Depending upon the configurations deployed, this Software Offering may use session cookies that collect session information (generated by the application server). These cookies contain no personally identifiable information and are required for session management. Additionally, persistent cookies may be randomly generated to recognize and manage anonymous users. These cookies also contain no personally identifiable information and are required.
- If the configurations deployed for this Software Offering provide you as customer the ability to collect personally identifiable information from end users via cookies and other technologies, you should seek your own legal advice about any laws applicable to such data collection, including any requirements for notice and consent. For more information about the use of various technologies, including cookies, for these purposes, see IBM's Privacy Policy at <http://www.ibm.com/privacy>, and IBM's Online Privacy Statement at <http://www.ibm.com/privacy/details> the sections entitled "Cookies, Web Beacons and Other Technologies" and the "IBM Software Products and Software-as-a-Service Privacy Statement" at <http://www.ibm.com/software/info/product-privacy>.

Support and comments

- For the entire IBM Worklight documentation set, training material and online forums where you can post questions, see the IBM website at:
