Patch P410W-000A

Patch: P410W-000A

Date: June 30, 2002

IBM® Directory Server Version 4.1 (128-bit Encryption Server Installations)

General description

The Patch contains fixes for a single problems encountered in IBM Directory Server Version 4.1. The APAR number for the problem is listed in **Problems fixed**. Refer to the specific APAR for more detail.

For information on changes and fixes that occurred after the product documentation had been translated, see the *IBM Directory Server Version 4.1 README Addendum*. This file is in English only. This file can also be found on the IBM Directory Server Library Web page using a link from <http://www-3.ibm.com/software/network/directory/library>. You can get to the latest information here:
<http://www-3.ibm.com/software/network/directory/library/v41/addendum41.pdf>

Problems fixed

New fixes in P410W-000A

APAR IR48471 (CMVC 69870 and 72520) – More granular locking is needed in the client code.

The LDAP client uses a single lock to control the flow of the APIs, so that at any given time an LDAP Descriptor (ld) is available to one API only. This works adequately for most operations because the operations get in the queue, wait their turn, perform their task, and then get out. However, in the one situation where `ldap_result()` is a factor, the operation might not be able to perform its task because the result might not yet be available.

Platforms

Microsoft® Windows NT® 4.0, Windows® 2000 and Windows 98

Dependencies

IBM Directory 4.1 must be installed.

DB2 Universal Database™ for Windows- Personal or Enterprise edition (DB2®).

Files replaced or added by this Patch

With `$INSTALL_DIR` representing the root of the LDAP installation, the files replaced are:

```
%INSTALL_DIR%/lib/ldapstatic.lib  
%INSTALL_DIR%/lib/ldap.lib  
%INSTALL_DIR%/bin/ldap.dll  
%INSTALL_DIR%/bin/P410W-000A.txt
```

The default for INSTALL_DIR is C:\Program Files\IBM\LDAP.

Patch contents

The archive for this Patch is named P410W-000A.zip. The archive for this Patch includes:

- This README file
- The file /lib/ldapstatic.lib
- The file /lib/ldap.lib
- The file /bin/ldap.dll
- The file /bin/P410W-000A.txt

Applying the Patch

Note: Your replication environment must be cleaned or resynched, or both. See Chapter 7, "Replication," of the *IBM Directory Server Version 4.1: Administration Guide* at:

<http://www->

[3.ibm.com/software/network/directory/library/publications/41/config/admin_gd.pdf](http://www-3.ibm.com/software/network/directory/library/publications/41/config/admin_gd.pdf)

1. Extract the Patch contents into a scratch directory. Use an unzip utility for extraction.
2. For each of the master and slave server installations targeted to receive the Patch, make sure the servers are stopped prior to applying the Patch.
3. Replace the installed version of each file with the version included in the Patch. Move the currently installed file to a location outside of the LDAP installation filesystem or rename the currently installed file. Copy the extracted files to the correct locations in the install folder. The install version locations for each file are:

```
%INSTALL_DIR%/lib/ldapstatic.lib
%INSTALL_DIR%/lib/ldap.lib
%INSTALL_DIR%/bin/ldap.dll
%INSTALL_DIR%/bin/P410W-000A.txt
```

Again, the default for INSTALL_DIR is C:\Program Files\IBM\LDAP.

4. At this point each of the replica and master servers can be started.

Confirming the Patch has been applied successfully

The Patch has been applied successfully if all files included in the Patch have replaced the pre-Patch files of the same names. If after applying the Patch, any facility making use of the SDK has degraded function as compared to its pre-fix operation, please notify IBM Directory Server Version 4.1 support personnel.

Below is some relevant information on the replacement files:

```
- Filesize for ldap/bin/ldap.dll      is 355641
- Filesize for ldap/lib/ldap.lib      is 231322
- Filesize for ldap/lib/ldapstatic.lib is 1249904
- sum -r ldap/bin/ldap.dll           results are: 50723 xxxx
- sum -r ldap/lib/ldap.lib           results are: 34669 xxxx
- sum -r ldap/lib/ldapstatic.lib     results are: 58391 xxxx
```

Each xxxx represents the number of blocks used by the file. This number is filesystem format dependent.

The contents of the bin/P410A-000A.txt file are:

```
IBM Directory Release: aus41ldap Build: 020610a
Mon 06/10/2002
```

Printed in U.S.A.
