

Defend your organization and keep attackers at bay with Security Intelligence

Nico de Smidt, IBM Security

Peter Mesker, SecureLink

IBM Security Framework (ISF)

ISF recognises 6 security domains.

Software and appliances for each of these domains can either be of the security enablers or security controllers type.

Depending on the maturity of the security framework implementation one will find either of these types in the domains.

SLIDE VAN ERNO

Detecting threats

- Arm yourself with comprehensive security intelligence

Consolidating data silos

- Collect, correlate and report on data in one integrated solution

Detecting insider fraud

- Next-generation SIEM with identity correlation

Better predicting risks to your business

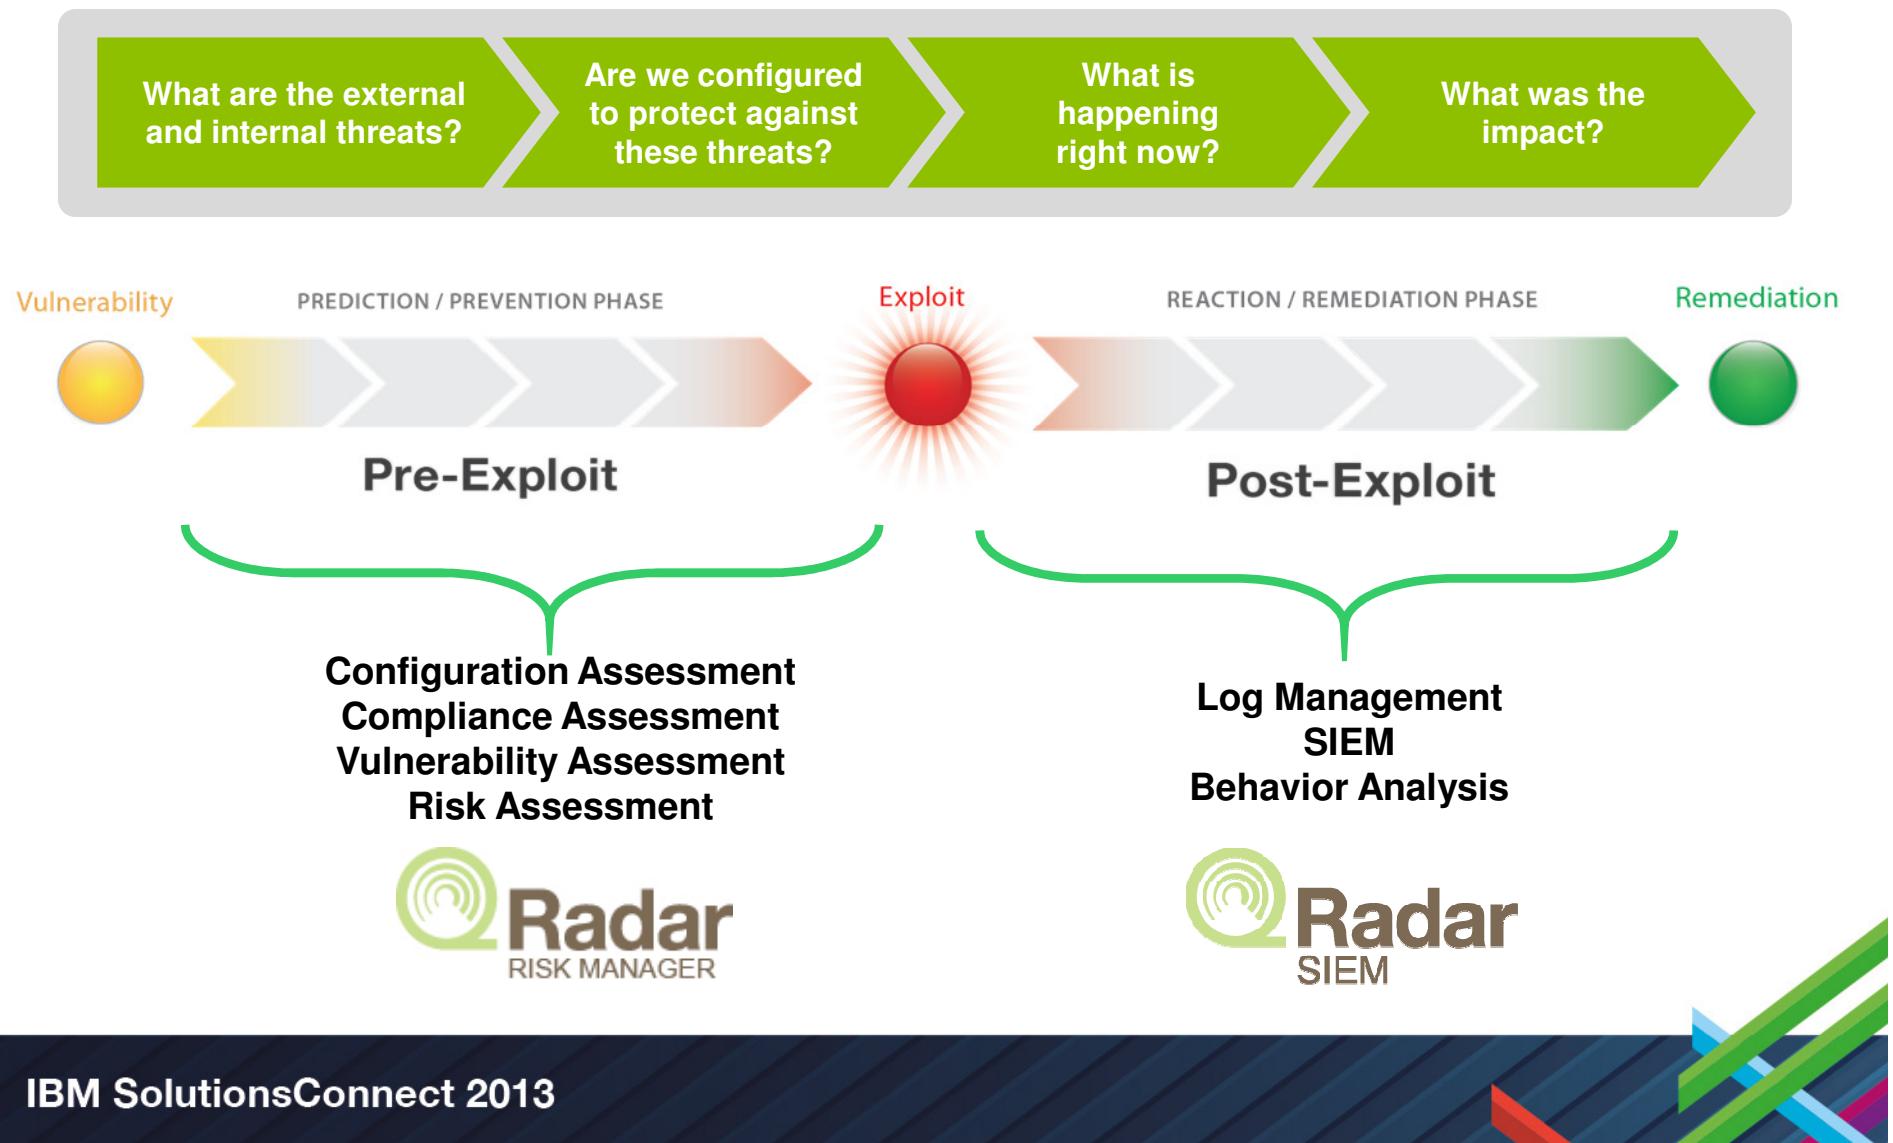

- Full life cycle of compliance and risk management for network and security infrastructures

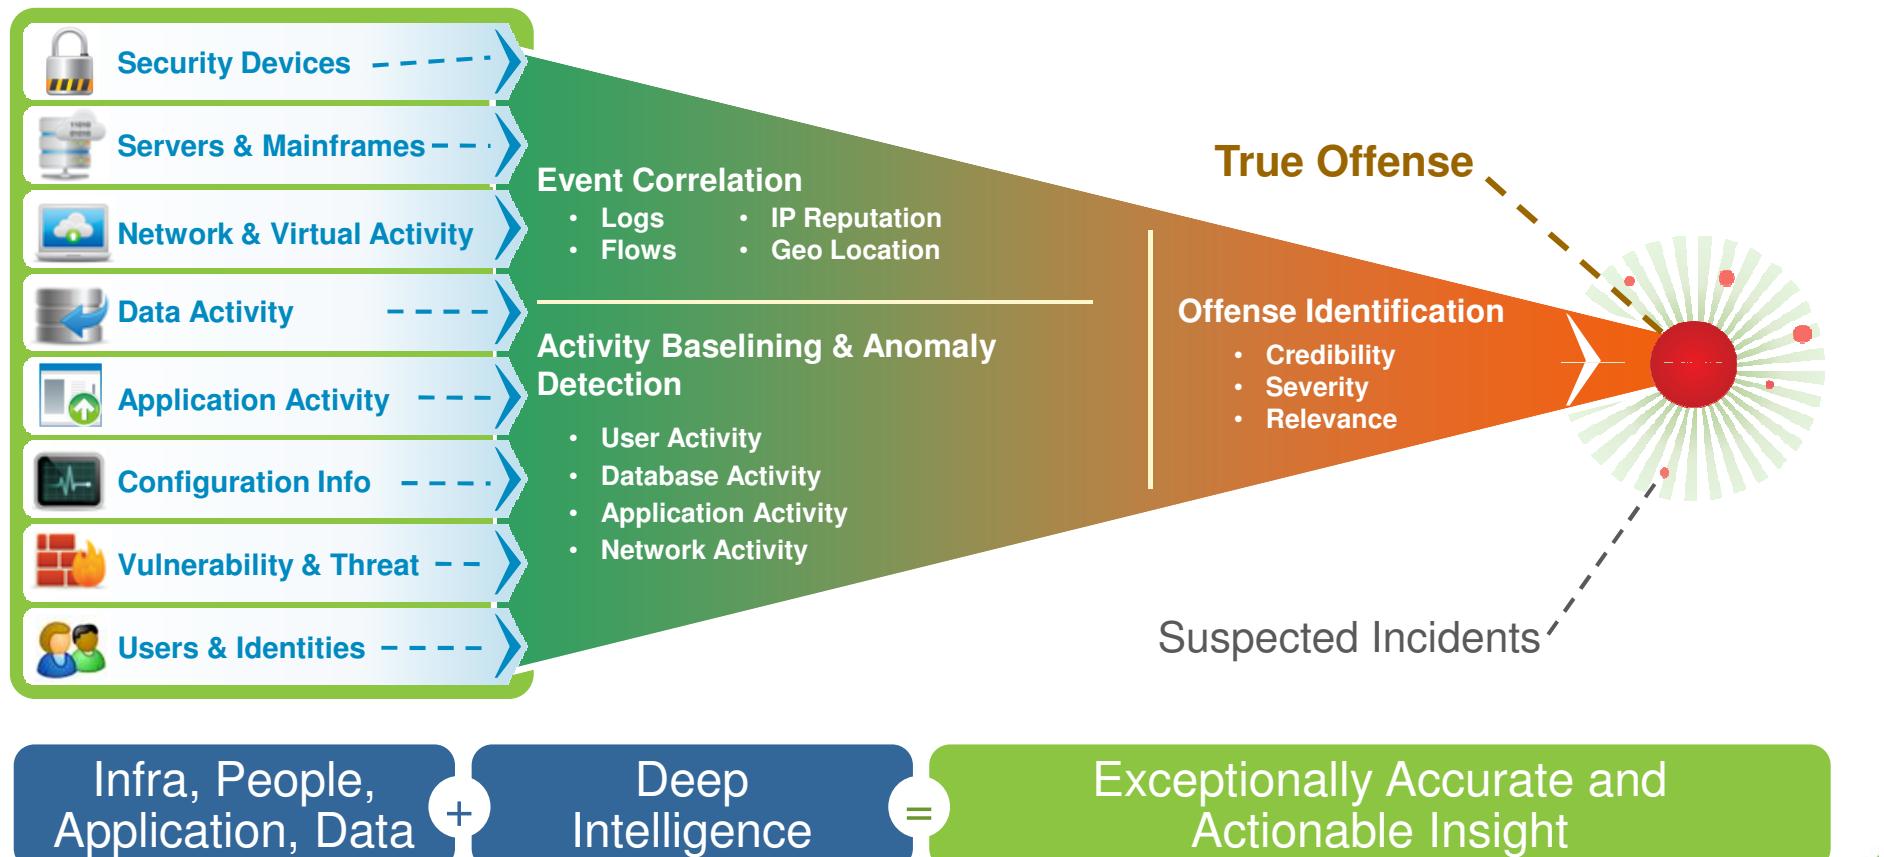

Addressing regulation mandates

- Automated data collection and configuration audits

Full Compliance and Security Intelligence Time line

Context and Correlation Drive Security Intelligence

Fully Integrated Security Intelligence in One Console

IBM Security QRadar SIEM

Challenge 2: Consolidating Data Silos

System Summary	
Current Flows Per Second	1.4M
Flows (Past 24 Hours)	1.3M
Current Events Per Second	17,384
New Events (Past 24 Hours)	677M
Updated Offenses (Past 24 Hours)	588
Data Reduction Ratio	310633 : 1

Analyzing both flow and event data. Only IBM Security QRadar fully utilizes Layer 7 flows.

Reducing big data to manageable volumes

Advanced correlation for analytics across silos

Offense 160		Display ▾				Events	Connections	Flows	View Attack Path	Actions ▾	Print	?		
Magnitude	<div style="width: 50%; background-color: yellow;"></div> <div style="width: 50%; background-color: red;"></div>	Relevance	5	Severity	10	Credibility	8							
Description	Destination Vulnerable to Detected Exploit preceded by Exploit/Malware Events Across Multiple Targets preceded by Aggressive Remote Scanner Detected	Offense Type	Source IP											
Source IP(s)	202.153.48.66	Event/Flow count	19984 events and 355 flows in 12 categories.											
Destination IP(s)	Local (315)	Start	2010-10-01 07:51:00											
Network(s)	Multiple (2)	Duration	2m 52s											
Assigned to Not assigned														
Notes														
Vulnerability Correlation Use Case Illustrates a scenario involving correlation of vulnerability data with IDS alerts														
An attacker originating from China (202.153.48.66) sweeps a subnet using the Conficker worm exploit (CVE 2008-4250).														
The first systems scanned are not vulnerable, but the final system's asset profile has had vulnerability data imported from a Ne														

Challenge 3: Detecting Insider Fraud

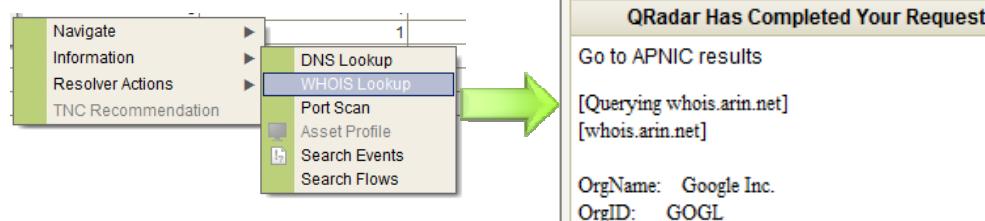

Potential Data Loss

Challenge 4: Better Predicting Risks

Pre-exploit Security Intelligence

Assets with High-Risk Vulnerabilities

Questions

Name	Group	Return Type	Importance Factor	Monitored
All Systems with Client Side Vulns		Assets	5	No
All Systems with Client Side Vulns which Communicate to the Internet		Assets	5	No
All Systems with Client Side which communicate to susp addresses		Assets	5	No
All Systems with client side with communications and critical data		Assets	5	No
All vulnerable assets		Assets	5	No

Description

Find Assets that are susceptible to vulnerabilities with one of the following classifications (Input Manipulation) and are susceptible to vulnerabilities with CVSS score greater than 0

Risk Score for the selected question is 3

Asset Results

IP	Name	Weight	Destination Port(s)	Protocol(s)	Flow Apps(s)	Vuln(s)	Slow Count	Source(s)	Destinat
10.0.5.68	dhcp-68-building-3.90mcx.com	0	N/A	N/A	N/A	Multiple (10)	0	N/A	N/A

Which assets are affected?
How should I prioritize them?

What are the details?
Vulnerability details,
ranked by risk score

Severity	Description	Impact
High	9723 Multiple Vendor LDAP Server NULL Bind Connection Information Disclosure	Multiple LDAP Server contains a flaw that may lead to an unauthorized information disclosure. The issue is triggered when the LDAP NULL bind entry is enabled by default, which may allow a remote attacker to anonymously view files on the LDAP directory resulting in a loss of confidentiality.
Medium	57799 Microsoft Windows svr2.sys Kernel Driver SMB2 Malformed NEGOTIATE PROTOCOL REQUEST Remote DoS	Microsoft Windows contains a flaw that may allow a malicious user to execute arbitrary code. The issue is triggered when a malicious user sends a specially crafted NEGOTIATE PROTOCOL REQUEST SMBv2 packet with an & (ampersand) character in a Process ID High header field, causing an attempted dereference of an out-of-bounds memory location. It is possible that the flaw may allow arbitrary code execution resulting in a loss of integrity.
Low	297 Microsoft Windows Installation ADMINS Share Arbitrary Access	Microsoft Windows contains a flaw that may allow a remote attacker to bypass authentication settings. The issue is triggered during the installation routine, which does not activate the Administrator password upon reboot. It is possible that the flaw may allow a remote attacker to arbitrary access the ADMINS share without a password, resulting in a loss of confidentiality and/or integrity.

Days of Exposure: 36 days

Description: Microsoft Windows contains a flaw that may allow a malicious user to execute arbitrary code. The issue is triggered when a malicious SMBv2 packet with an & (ampersand) character in a Process ID High header field, causing an attempted dereference of an out-of-bound arbitrary code execution resulting in a loss of integrity.

Classification: Location: Remote / Network Access
Attack Type: Denial of Service, Input Manipulation
Impact: Loss of Confidentiality, Loss of Availability
Solution: Patch / RCS
Exploit: Exploit Public, Exploit Commercial
Disclosure: Vendor Verified, Uncoordinated Disclosure

Solution: Currently, there are no known workarounds or upgrades to correct this issue. However, Microsoft Corporation has released a patch to

Challenge 5: Addressing Regulatory Mandates

Offense 2862		Summary	Attackers	Targets	Categories	Annotations	Networks	Events
Magnitude	<div style="width: 50%;">██████</div>					Relevance	2	
Description	Policy - Internal - Clear Text Application Usage containing Compliance Policy Violation - QRadar Classify Flow			Event count	1 events in 1 category			
Attacker/Src	10.103.12.12 (dhcp workstation 103-12-12.acme.org)		Start	2009-09-29 15:09:00				
Target(s)/Dest	10.101.3.30 (Accounting Fileserver)		Duration	0s				
Network(s)	IT.Server.main		Assigned to	Not assigned				
Notes	PCI Violation Use Case PCI DSS specifies that insecure protocols may not be used. This scenario demonstrates how QRadar can identify such activity. In this offense the system has captured cleartext network activity (telnet and FTP) to the Accounting server.							

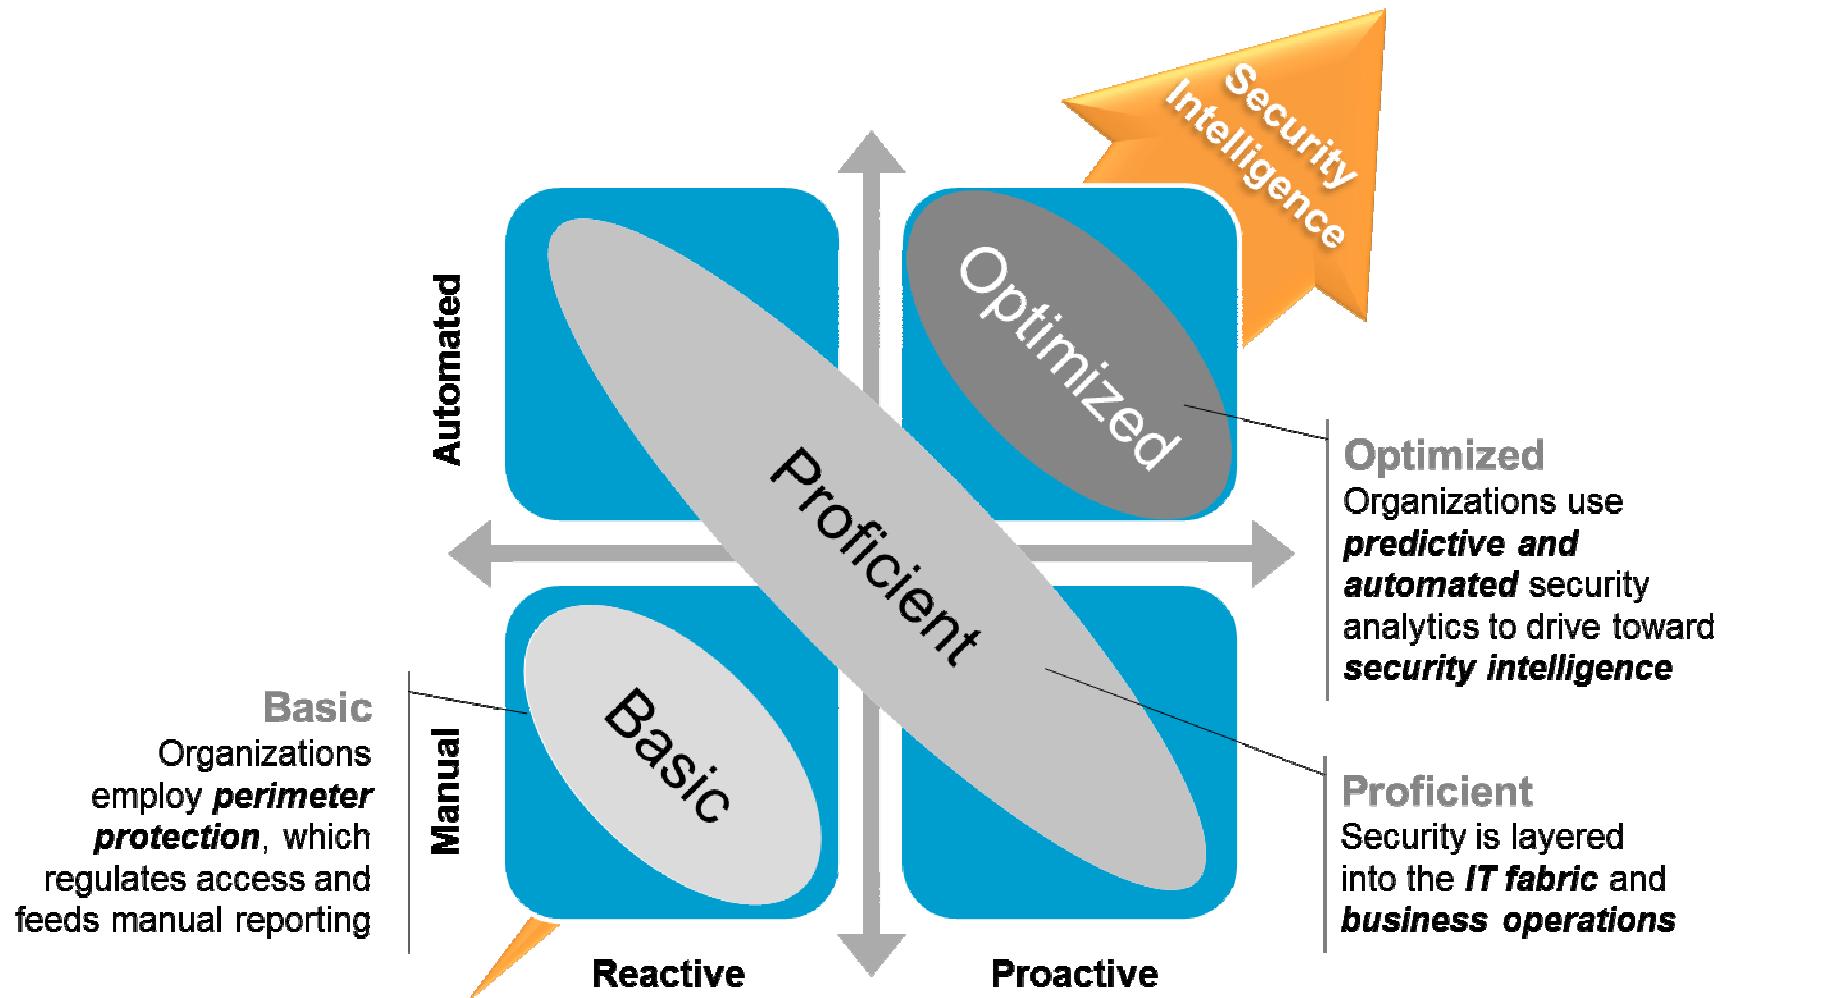

PCI compliance at risk?
Real-time detection of possible violation

Event Name ▾	Log Source	Source IP	Source Port	Destination IP	Destination Port
Compliance Policy Violation - C	Flow Classification Engine-5	10.103.12.12	1482	10.101.3.30	23

Unencrypted Traffic

IBM Security QRadar QFlow saw a cleartext service running on the Accounting server
PCI Requirement 4 states: Encrypt transmission of cardholder data across open, public networks

Get an Intelligent View into your Security Posture

QRadar's Unique Advantages

- Real-time context driven correlation and anomaly detection

➤ *Impact: More accurate threat detection, in real-time*

- Integrated flow analytics with Layer 7 application visibility

➤ *Impact: Superior situational awareness and threat identification*

- Automated data collection, asset discovery and asset profiling

➤ *Impact: Reduced manual effort, fast time to value, lower-cost operation*

- Easy to use and edit correlation rules, reports and dashboards

➤ *Impact: Maximum insight, business agility and lower cost of ownership*

- Scalability for largest deployments

➤ *Impact: QRadar supports your business needs at any scale*

Network Behavior & Anomaly Detection

Network Change & Configuration Management

Risk Analysis

- Toename aantal security devices, policies en logging
- Behoefte security event management en centralisatie en correlatie van log informatie
- Real-time rapportage
- Network automation
- Centraal management dashboard
- Compliancy

Uitdagingen voor grote gemeente in Nederland

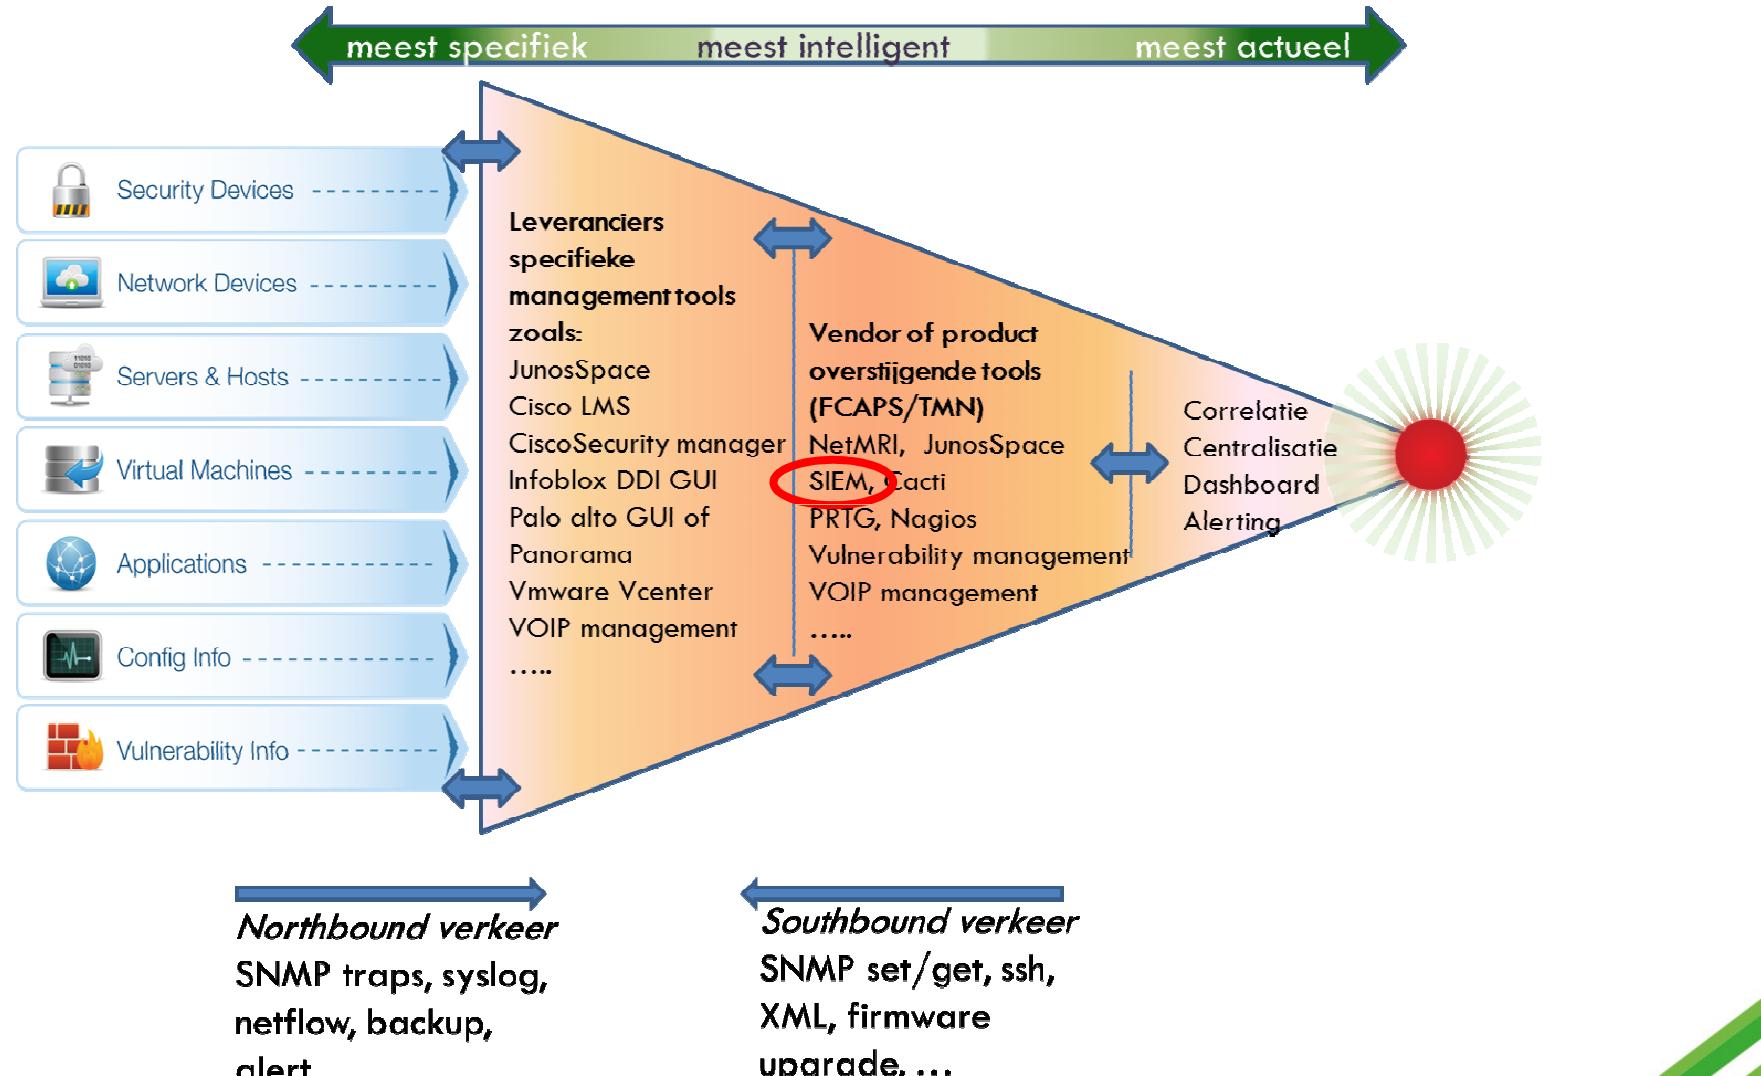

- ✓ Nieuwe private cloud gebaseerde infrastructuur
- ✓ Multi tenancy (gemeente is tevens service provider)
- ✓ Next generation security oplossingen
- ✓ Retentie, compliancy
- ✓ Security onderdeel van het IT proces

Hoe behoudt men zichtbaarheid en controle in deze complexe infrastructuur?

Mogelijke antwoorden:

Vendor specifieke tools, open source tools zoals (MRTG, CACTI), outsourcen, syslog server, flow collector, splunk, ...

Beter antwoord | Creëer een integrated end-to-end management oplossing

SIEM teleurstellingen

- ✓ 100k verder en nog niet compliant!
- ✓ Gehacked ondanks SIEM!
- ✓ Beleid schrijft SIEM voor, maar niemand wil het betalen...
- ✓ SIEM? Vertrouw je ons niet?

SIEM business succesfactoren

(deze vijf stappen heeft de gemeente doorlopen alvorens te gunnen)

Vaststellen businessdrivers

Vaststellen potentiele afnemers

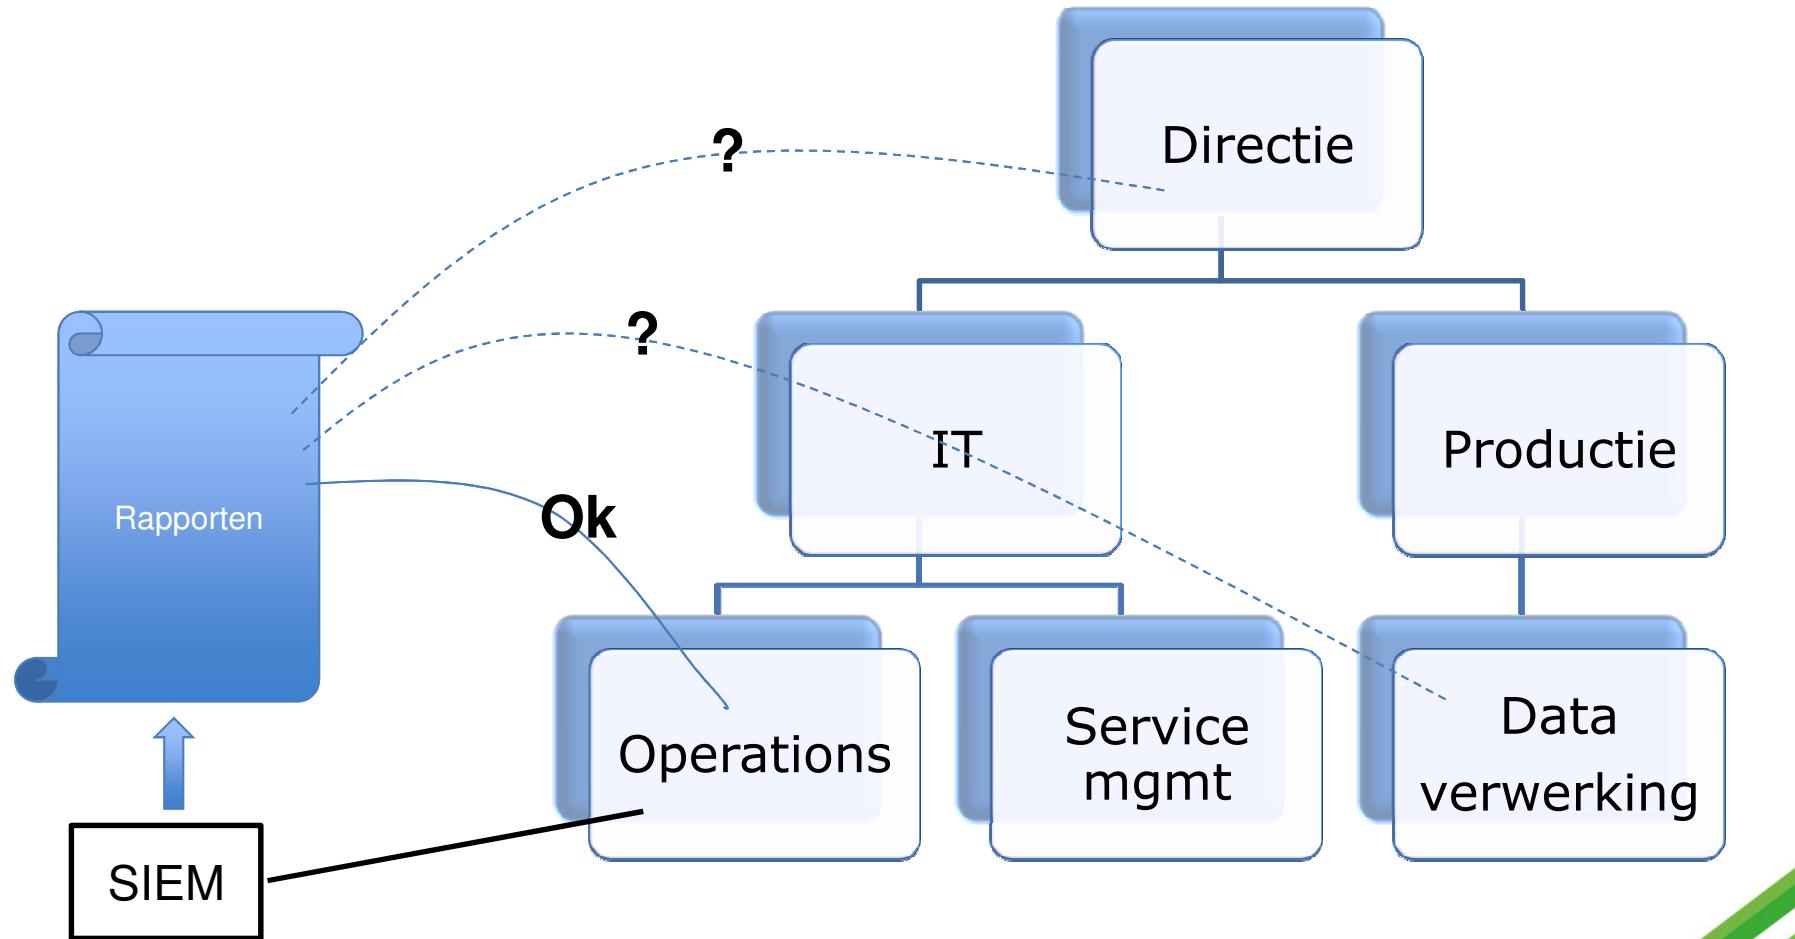

Start architectuur bepalen

Financieringsmodel afstemmen

Product / dienst selectie

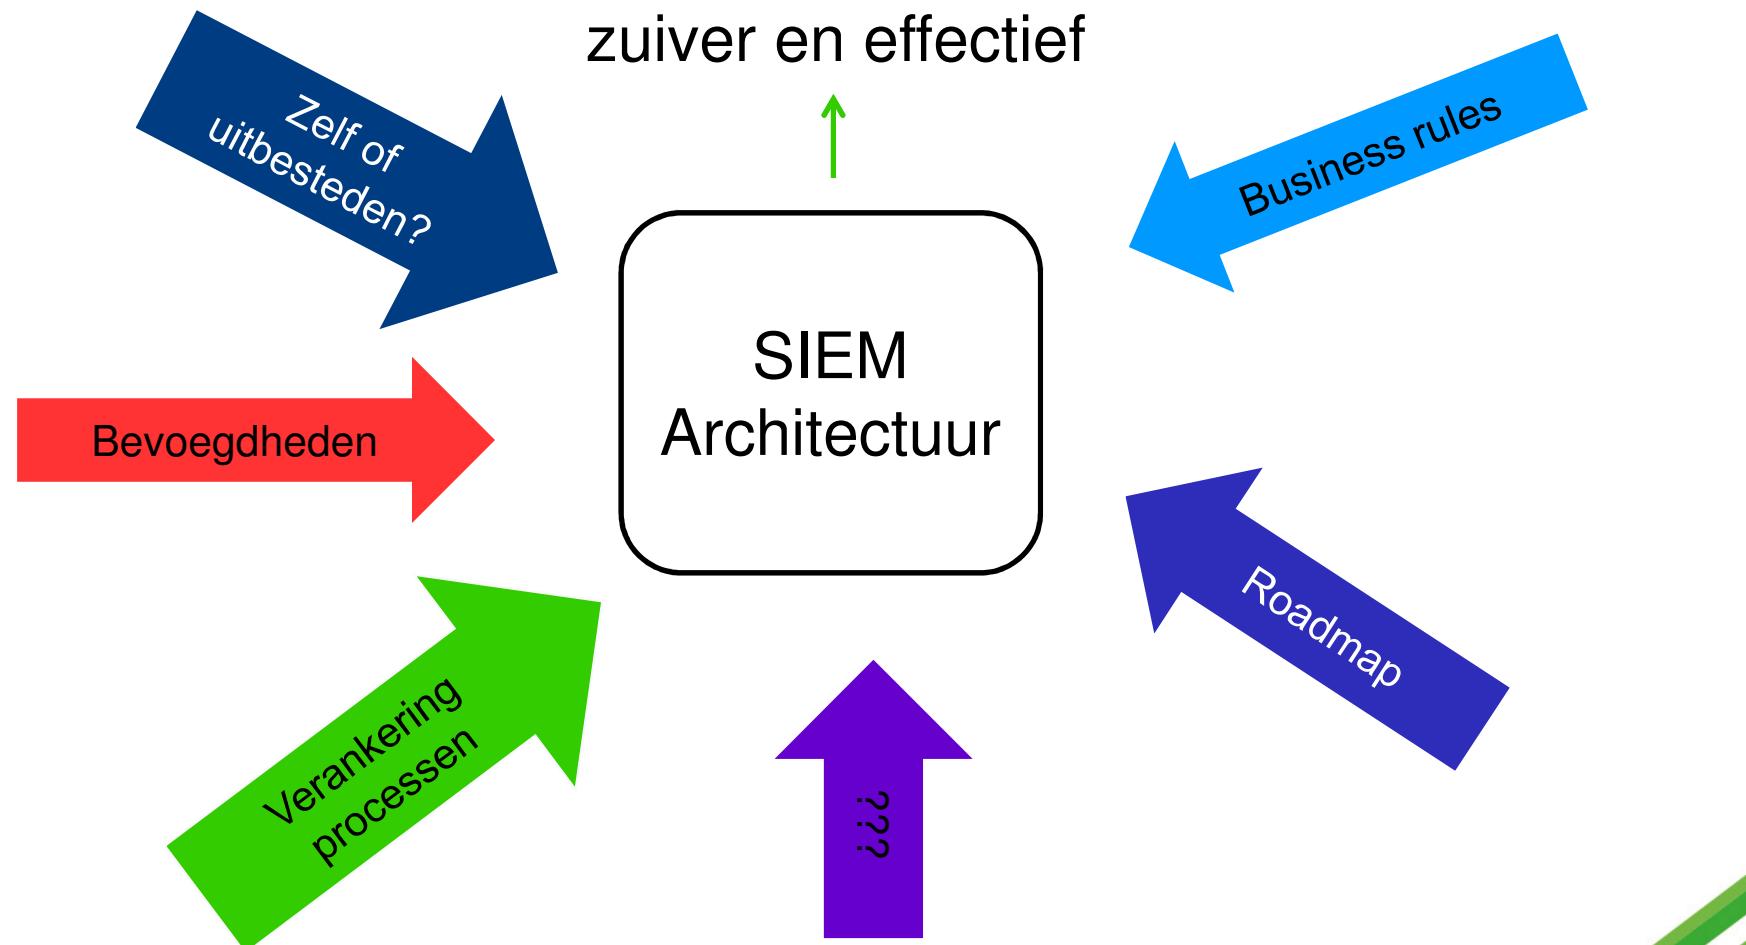

Wie zijn aan de klantkant de afnemers van SIEM

Architectuur SIEM

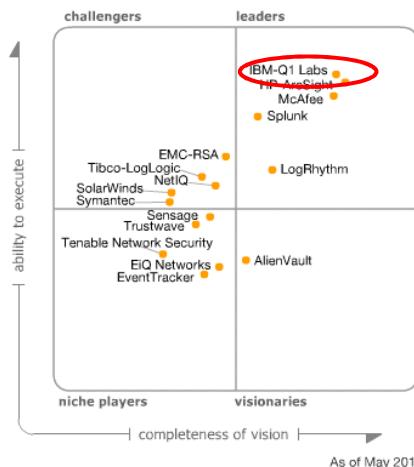

Houdt discussie
zuiver en effectief

SIEM Techniek | Waarom QRadar

- ✓ Appliances en virtualisatie
- ✓ Rollen
- ✓ Opslag, retentie
- ✓ Compliancy

- ✓ Marktleider
- ✓ Referenties
- ✓ Roadmap
- ✓ Ease of deployment

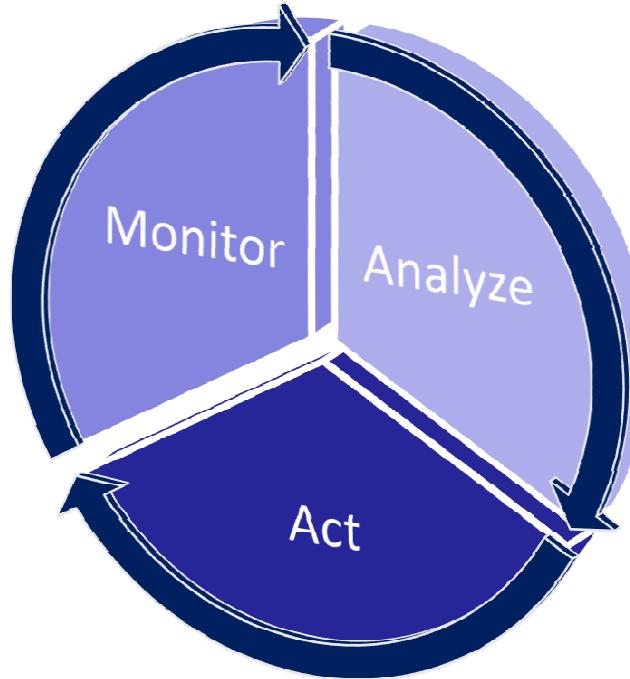

Sizing en plaatsing

- ✓ Wat is relevant?
- ✓ Schaalbaarheid
- ✓ Event informatie
- ✓ Flow informatie

Configuratie en integratie

- ✓ Auto-discovery of log sources, applications and assets
- ✓ Asset auto-grouping
- ✓ Centralized log mgmt
- ✓ Automated configuration audits

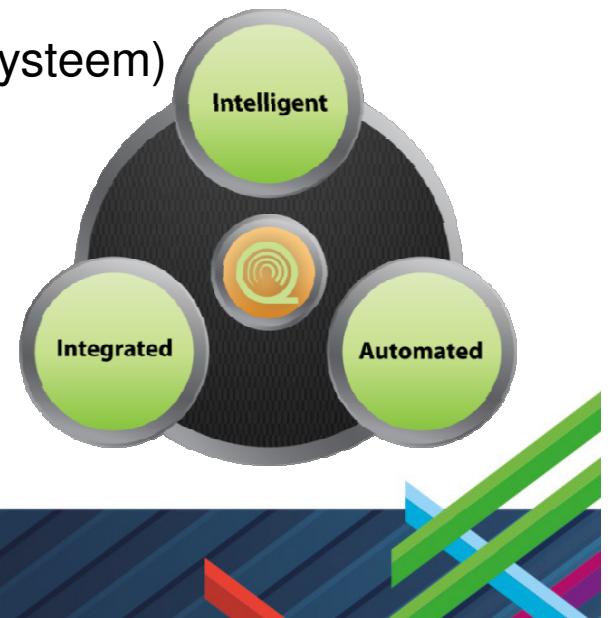

- ✓ Asset-based prioritization
- ✓ Auto-update of threats
- ✓ Auto-response
- ✓ Directed remediation

- ✓ Auto-tuning
- ✓ Auto-detect threats
- ✓ Thousands of pre-defined rules and role based reports
- ✓ Easy-to-use event filtering
- ✓ Advanced security analytics

Benefits voor grote gemeente

- ✓ Real time dashboard voor threat detectie en detectie van security incidenten
- ✓ Goede analyse van impact en relevantie van een offense
- ✓ Verminderde manuele acties,
- ✓ Goede prijs/pret verhouding
- ✓ Maximale inzicht, grip op de business
- ✓ Goed integratie (bijv. Met Vulnerability Management systeem)
- ✓ Schaalbaar
