

A decorative graphic in the top left corner consists of several overlapping circles of various colors (yellow, orange, red, purple, blue) that are divided into segments, resembling a stylized sunburst or a cluster of data points.

The Gold Standard for Enterprise Computing

Mainframe Skills – The Myth and the Reality

There's a perception of a mainframe skills shortage...

- ... which might discourage companies from deploying new workload on the platform
- ... or lead others to consider moving off the mainframe altogether

**...Let's look at the facts
and try to understand the real picture**

Three things to keep in mind

1

Numerous indicators show mainframe usage continuing to grow for the foreseeable future

2

IBM has made considerable investment in intuitive, GUI-based tools for mainframe administration and development

3

IBM continues to invest heavily in development of mainframe skills for the next generation

Mainframe usage is growing and is projected to continue

Finally, despite regular declarations that “the mainframe is dead,” the research shows this has never been further from the truth. In reality, the mainframe is working harder than ever. Almost two-thirds of respondents (62 percent) are now using mainframe applications, which were initially designed to perform back-end functions, to now support external-facing services, such as e-commerce (chart 9). This is putting added pressure on the mainframe and, in turn, increasing MIPS. This is evidenced by the fact that 68 percent of respondents believe that the increase in mobile applications is driving higher MIPS usage (chart 10).

Chart 9: 62 percent of companies are using their mainframes to support external applications, such as online banking.

Chart 10: 68 percent of respondents believe that the increase in mobile applications is driving higher MIPS usage.

Compuware commissioned Vanson Bourne to study the impact of new IT trends and models. In September 2012, the independent research firm interviewed 520 CIOs from large enterprises across a range of industries in the U.S., Europe & Asia.

Eagle studies validate that adding workload to mainframes *reduces* labor cost per unit of work

Labor cost per mainframe MIPS

Independent analysis shows that mainframe administration requirements are typically less than for distributed platforms

Staffing levels required to maintain a “gold standard”:

- Normalized to VMWare in Medium sized environment
- Staffing levels for z/VM was as much as 13x smaller

Estimation of the potential mainframe skills demand over the next six years

- IBM CPO projects 37,200 additional mainframe positions needed WW by 2020
 - Projection based on mainframe MIPS growth from 2005-13
- Some number of today's personnel will retire by 2020, increasing that demand

IBM programs such as the Academic Initiative are targeted to meet this demand

(Academic Initiative trains on average 6,400 annually)

Source: IBM CPO estimations based on IBM data and assuming current productivity levels

Most companies say they are OK now, but many need a talent replenishment plan

80% of System z customers don't have a skills issues now

55% of System z sites don't have a talent plan for mainframe skills

“Right now, it's pretty easy to hire programmers, and if they understand Java I can bring them back to procedural languages like Cobol,”

— David Brown, managing director of BNY Mellon's IT transformation group**

Source: IBM's 2013 System z Tracker

**http://www.computerworld.com/s/article/9225099/Cobol_brain_drain_Survey_results?taxonomyId=154&pageNumber=1

The shortage of mainframe skills projected is only about 10% of a greater problem...

- US government predicts that approximately **810,000** new and replacement administrative personnel will be needed across *all* platforms by 2020

...the requirements for development of an aggressive talent plan should cover all platforms within the data center, and not just the mainframe

Three things to keep in mind

1

Numerous indicators show mainframe usage continuing to grow for the foreseeable future

2

IBM has made considerable investment in intuitive, GUI-based tools for mainframe administration and development

3

IBM continues to invest heavily in development of mainframe skills for the next generation

Today, mainframe system administrators use the latest workstation-based tools

IBM z/OS Management Facility (z/OSMF) - a modern, browser-based console for management of day-to-day operations and administration

- Maximizes productivity of a diversified workforce
 - Simplification of tasks
 - Enhanced collaboration
 - Reduced learning curve
- Role-based, scenario-based
- Integrates with other tools

z/OSMF

*Browser
(Windows IE
Firefox)*

↔
HTTP(S)

z/OS administrators work from an Eclipse-based integration platform

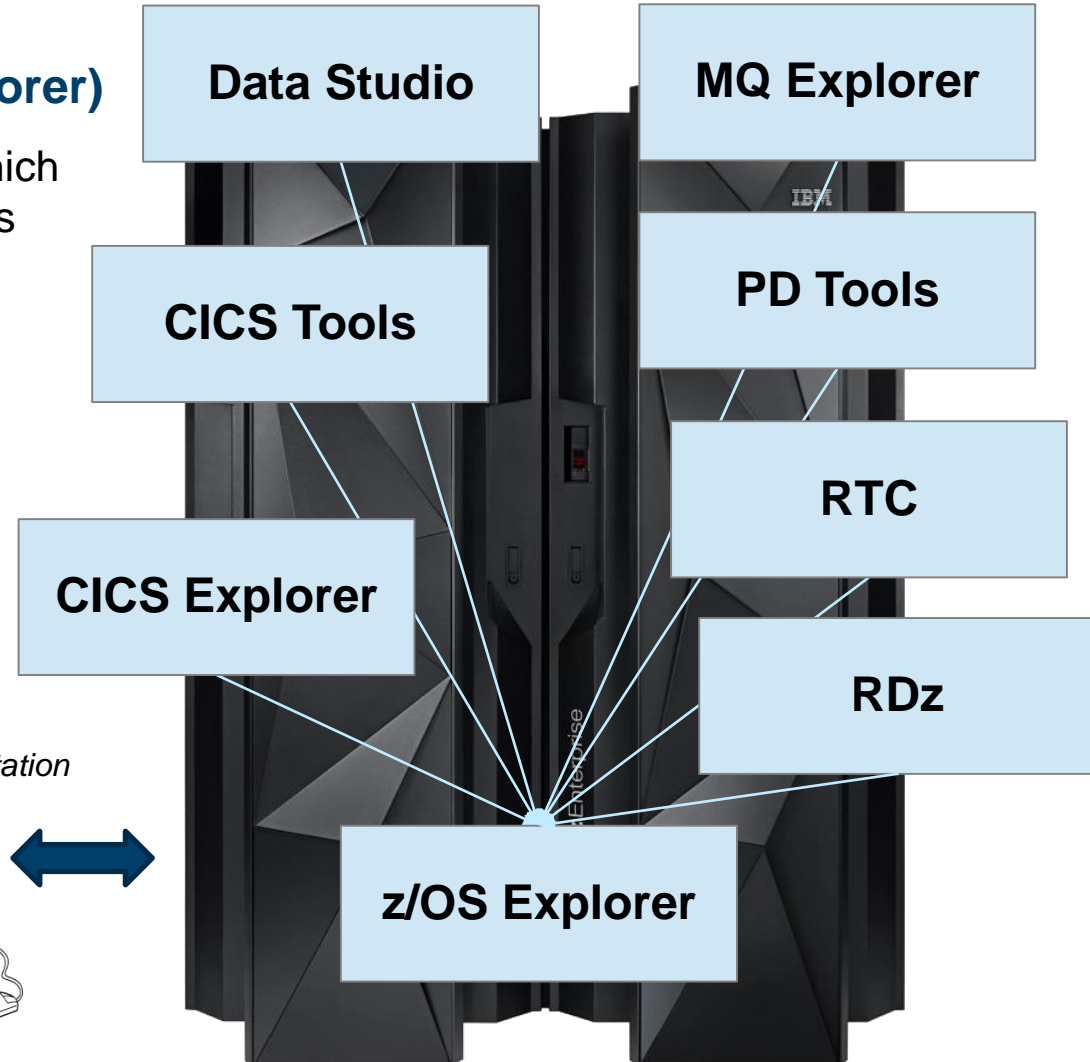

IBM Explorer for z/OS (z/OS Explorer)

- Provides a single workbench from which to develop, and test z/OS applications and manage related sub-systems
- Common base for many z/OS tools
- Extendable to accommodate user's roles and responsibilities

MQ Explorer plug-in in z/OS Explorer – showing Queues and Jobs

Eclipse workstation

Business Connexion, Ltd. (South Africa) – Services company simplifies its IT to better meet customer requirements

A committed CICS service provider looking to continue delivering strong value proposition

Business challenge:

- Customers consistently requesting “give more for less”
- Required easier-to-use interfaces into its CICS systems

Solution:

- Reinvented their IT with the CICS Explorer, CICSplex System Manager (CPSM), Events Processing and ATOM feeds features
- Enhanced CICS resources to populate a business operations dashboard – highlights all the CICS events in the system

Benefits:

- Made system administration more intuitive and user friendly
- Provides greater control and monitoring, helping customers better react to situations

"The CICS Explorer is a non-chargeable Eclipse based tool that provides our clients views of their resource state and information across multiple CICS Systems - it's simple to deploy and simple to use and should make it easier for our new staff to become competent on our CICS systems more quickly"

- Rob Loyd, data center services manager

An entire enterprise can be efficiently managed with intuitive, GUI-based capability

Tivoli Enterprise Portal

The screenshot displays the Tivoli Enterprise Portal interface. At the top, a navigation pane shows a tree view of the system hierarchy, including 'Enterprise', 'New Tables for IMS Systems', 'PFWOLER', 'Windows OS', 'Prototype::TWS', and 'TWS_Job_Detail (Prototype)'. The main area is split into two sections. The upper section, titled 'Job Duration', features a 3D bar chart with the vertical axis labeled 'Seconds' ranging from 0 to 400. Three bars represent jobs: HOR50005 (approx. 350s), HOR50007 (approx. 50s), and HOR50001 (approx. 150s). A callout box points to this chart with the text: 'Graph showing duration times for each job that has executed'. The lower section, titled 'Tivoli Workload Scheduler Detailed Job Status', contains a table with columns for Timestamp, Job Description, Application Identifier, Job Name, Operation Number, WS Identifier, Descriptive Text, Actual Start Time, Actual End Time, Duration, Error Code, and Job Status. A callout box points to the 'Job Status' column with the text: 'Thresholds on Status states'. The table shows various job entries with statuses such as Complete, Error, Started, Waiting, Ready, and Active. The bottom status bar indicates 'Hub Time: Fri, 02/10/2006 04:33 PM' and 'Server Available'.

Timestamp	Job Description	Application Identifier	Job Name	Operation Number	WS Identifier	Descriptive Text	Actual Start Time	Actual End Time	Duration	Error Code	Job Status
02/10/06 16:33:39	HOR50DAY	HOR50DAY	HOR50005	005	CPU	Operation 005	08:39:30	08:45:15	00:05:45	-	Complete
02/10/06 16:33:39	HOR50DAY	HOR50DAY	HOR50007	007	CPU	Operation 007	08:45:15	08:45:20	00:00:05	MCP	Error
02/10/06 16:33:39	HOR50DAY	HOR50DAY	HOR50006	006	CPU	Operation 006	08:45:20	00:00:00	00:00:00	-	Started
02/10/06 16:33:39	HOR50DAY	HOR50DAY	HOR50030	030	CPU	Operation 030	00:00:00	00:00:00	00:00:00	-	Waiting
02/10/06 16:33:39	HOR50DAY	HOR50DAY	HOR50010	010	CPU	Operation 010	00:00:00	00:00:00	00:00:00	-	Ready

02/10/06 16:33:39	HOR50DAY	HOR50DAY	HOR50031	031	CPU	Operation 031	00:00:00	00:00:00	00:00:00	-	Waiting
02/10/06 16:33:39	HOR50DAY	HOR50DAY	HOR50022	022	CPU	Operation 022	00:00:00	00:00:00	00:00:00	-	Waiting

(Tivoli Enterprise Portal was used in the demos in modules 1 and 4)

COBOL continues to be alive and well!

Is Cobol being used in your organization to develop new business applications?

Yes: 53%

No: 44%

Don't know: 3%

Base: 131 IT professionals

To what extent do your organization or systems use these programming languages?

Language name	A lot	A little	None
Cobol	48%	16%	37%
JavaScript	41%	41%	19%
Java	39%	40%	22%
C#	26%	25%	50%
VB.net	25%	38%	38%
Visual Basic	22%	49%	30%

Base: 202 IT professionals.

Percentages may not add up to 100 because of rounding.

- See ***“Leaving the Myth business to the ancient Greeks and Romans: COBOL is dead ... seriously?”*** (http://get.syr.edu/news_alt.aspx)

Languages should be selected using “fit-for-purpose”

COBOL's use

- building mission critical applications in the business logic and data management layers
- where records are processed and calculated
- where performance is important in delivering high service levels
 - sub-second response time is needed
- where you need to get programmers to learn a language quickly and that the resulting code needs to be readable by non-programmers
- not for the presentation layer where chasing a mouse around a screen is required

Compared to more modern programming languages such as Visual Basic, C#, C++ and Java, how does Cobol rate for these characteristics:

Function	Much better/ Somewhat better	About the same	Worse/ Much worse
Batch processing	82%	12%	4%
Transaction processing	65%	24%	9%
Handling business-oriented features	55%	21%	19%
Run-time efficiency	54%	33%	8%
Security	39%	38%	15%
Reporting	45%	37%	17%
Development cost	39%	32%	17%
Maintenance cost	43%	29%	18%
Ability to hire programmers	13%	25%	55%
Agility	15%	33%	45%

Base: 131 IT professionals

Jettisoning CICS/COBOL can be problematic, risky and expensive

- Moving applications off the mainframe with a Micro Focus compiler can lead to significant performance issues
- HP (a major rehosting competitor) estimates that 20% of COBOL lines will need to be rewritten under Micro Focus

“COBOL and the mainframe run well together, and that's where I want to keep it.”

*David Brown managing director
of the IT transformation group
at BNY Mellon*

“Millions of users unknowingly activate CICS every day, and if it were to disappear the world economy would grind to a halt.”

Phil Manchester, Personal Computer Magazine

Today, COBOL application development is simplified using Eclipse-based graphical editing tools

DEMO: COBOL development using state-of-the-art Eclipse-based tools

COBOL files

Enhanced editing features

Remote system details

Use a single, rich, integrated interface for all zEnterprise development

Rational Developer for System z

- Supports all mainframe languages (COBOL, PL/I, C/C++, ASM, Java, etc.) and runtimes (CICS, IMS, Batch, USS, DB2, WAS, etc.)
- Fully supports development and reuse of all mainframe assets
- Connected and disconnected modes
 - Connect to z/OS for debug, job generation, etc.
 - Disconnect and reduce mainframe MIPS usage and costs
- Includes Web Services and JSON wrappers

The screenshot displays the RDz Eclipse interface with several key components highlighted by blue arrows and text:

- Disconnected -vs- Connected:** A purple arrow points to the 'Remote Systems' tree on the left, which shows a tree structure for 'CTFMS07' with sub-nodes for 'MVS Files', 'USS Shells', and 'JES'. A purple arrow points to the 'MVS PDS members' node.
- Configurable Editor:** A purple arrow points to the main editor window showing a JCL program with fields for Line, Column, and Insert.
- USS Command Shell:** A purple arrow points to the 'USS Command Shell' window at the bottom.
- TSO Command Shell:** A purple arrow points to the 'TSO Command Shell' window at the bottom.
- JES sub-system view:** A purple arrow points to the 'JES sub-system view' window at the bottom.
- Data set characteristics:** A purple arrow points to the 'Properties' window at the bottom left, which shows details for a data set like 'TSO-CTFMS08'.

RDz Eclipse interface

Mainframe Problem Determination Tools (PDT) are integrated into the workstation development environment

- Easily debug and step through multi-tier applications

Displaying Fault Analyzer report

Editing data with File Manager

Debugging application with Debug Tool

Developing System z application with RDZ

- End-to-end debug
- Edit VSAM data
- Analyze ABEND logs!

DEMO: Grow and enhance the skills set of development teams through use of multi-faceted, integrated tools

- RDz makes it easy for Java developers to also contribute to COBOL applications
- Features in RDz enable cross-fertilization of development skills
 - Results in more unified team, back-filling capabilities, enabling future growth
 - Reduces overhead and cost of multiple tool sets

The screenshot displays the IBM Rational Developer for z/OS (RDz) environment. The main window shows a COBOL program being developed in the 'StartApp.cbl' file. The code includes logic for processing input names, such as moving spaces to the input name and tallying character counts for leading spaces. A 'Control flow diagram' window is visible at the top, showing the program's execution path. The 'Variables' window on the right lists program variables, with 'INPUT-NAME' highlighted and set to 'Bill Hudak'. A table named 'HEALTH_PLAN' is also visible, containing columns for PLAN_ID, GROUP_ID, and PROVIDER, with several rows of data. A context menu is open over the table, showing options like 'Refresh', 'Edit Value', and 'Delete Row'. The 'Monitors' window at the bottom right shows the current state of variables, including 'INPUT-NAME = "Bill Hudak"' and 'CHAR-COUNT = 00'.

zEnterprise has tools that enable a DevOps approach for continuous development and operations

Today, customers expect **better product quality** and **shorter release cycles**. Businesses must meet this challenge, while **keeping costs low**

DevOps:

- A process that addresses this challenge
- Unites Development and Operations around a continuous and agile delivery model
- Enables Testers to have production-like environments
- Ensures an integrated view to govern and manage end-to-end delivery pipeline

Rational solution packages for zEnterprise help to automate the development and testing cycles for DevOps agility

Rational Quality Manager

Rational Test Workbench

Agile compilation and unit test can be done off-platform to reduce costs and simplify operations

Rational Development and Test (RD&T)

No interruptions to mainframe operations

- Compile and Unit Test on an Intel x86 server running Linux
- RD&T server runs z/OS and all mainframe software
- Continuously updated to emulate the latest releases of zEnterprise hardware and software
- Enables developers to rapidly prototype new applications
- Eliminates costly delays by reducing dependencies on operations staff

Using the right tools can yield significant business benefits

Business challenge	Business benefit of Rational Development & Test
Application quality issues	Highest-fidelity environment (vs. simulators provided by competitors)
Cost of mainframe development	Development and Test MIPS can be re-allocated for higher value production workloads
Developer productivity affected by test system availability	More control in hands of developers – reduces dependency on test personnel
Slow time-to-market	Reduces delays, faster debugging, improves testing speed and accuracy
Competitive development costs at scale	Brings System z development and test in line with Unix and Windows
Different skill sets required for mainframe and distributed	Use of a common IDE and processes eliminates need for cross-training – skills are immediately unleashed

Use the Job Board to find needed skills

Welcome to the System z Job Board

Are you looking to hire talented System z professionals?
Are you seeking a career with System z technology?

Then you've found the right place! This web site connects IBM System z clients, partners and businesses with students and professionals seeking System z job opportunities.

Special limited-time offer! Employers who hire a candidate through Systemzjobs.com and agree to publicize their hiring success can receive a voucher to send an employee to an instructor-led [online System z course](#) (valued at \$1,200). Once you make a connection through Systemzjobs.com, simply send an email to zskills@us.ibm.com to request your voucher. First-come, first-served!

Job Seekers
