Lotus

Domino Everyplace Enterprise

Mobile Notes Application Sync and Development.

- **Extend the messaging and collaboration power of Domino™.** Develop powerful solutions that provide secure access to enterprise data.

- **Design, deploy, synchronize and administer Mobile Notes™ applications.** Use a flexible, extensible development tool.

- **Create applications using Domino Designer™.** Leverage the Domino Designer environment to create mobile applications.

- **Mobile Notes client for PDAs.** Enjoy familiar Notes functionality, collaboration and workflow on Palm, Windows Pocket PC and EPOC platform PDAs.

- **XML-based application structure.** Ensure flexibility and scalability with a mobile application framework based on XML and SyncML.

- **Central administration.** Device, application and user management are simplified and centrally controlled via a single interface.

Domino™ Everyplace Enterprise server lets organizations provide both wireless and wired sync solutions to mobile workers quickly and easily by leveraging the collaboration power of Domino. Combined with the Mobile Notes™ client, Domino Everyplace Enterprise optimizes your investment in Domino by extending core business applications and infrastructure to mobile and wireless devices. Easy to set up, deploy and administer, Domino Everyplace Enterprise is a powerful solution that provides mobile users access to their most critical information anytime, anywhere.

Domino Everyplace Enterprise delivers a robust application development environment for easily creating and extending business applications to mobile and wireless devices on Palm, Windows Pocket PC and EPOC platforms. Domino Everyplace Enterprise is based on industry standards such as XML and SyncML and enables workers to work off-line, regardless of the type of connectivity.

Mobile Application Development Tool
Domino Everyplace Enterprise provides a robust development tool to rapidly convert existing Domino applications to mobile applications or to develop new mobile applications. With it you can convert or create key business applications such as sales force automation, customer relationship management and supply chain management for use by mobile workers. The mobile application development architecture creates a mobile framework with internal design notes, compiler documents and filters used by an XML translator that converts your Notes®/Domino application into a mobile application.

Simple, Intuitive and Powerful Interface.

This flexible architecture lets you use existing skill sets to design mobile applications in Domino Designer™ and eliminates the need to learn another IDE (integrated development environment). Domino Everyplace Enterprise also provides a mobile application testing utility that lets you easily run and test applications prior to deployment. Reference applications provide examples of collaborative applications such as messaging and personal information management you can create for mobile use. The interface is simple, intuitive and powerful.
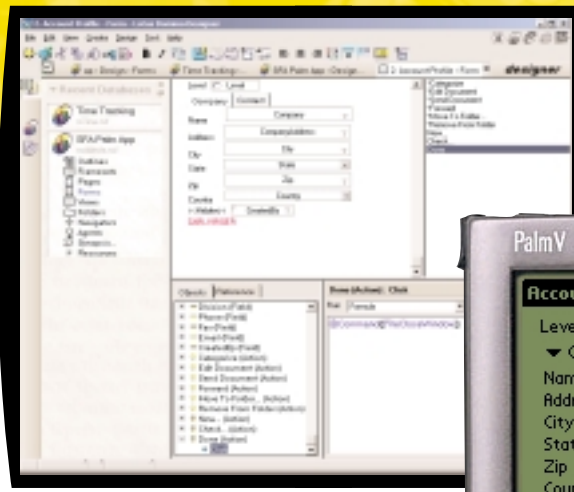

How Domino Everyplace Enterprise works.

Domino Everyplace Enterprise has three major components: sync services for Domino, an application development tool and the Mobile Notes client.
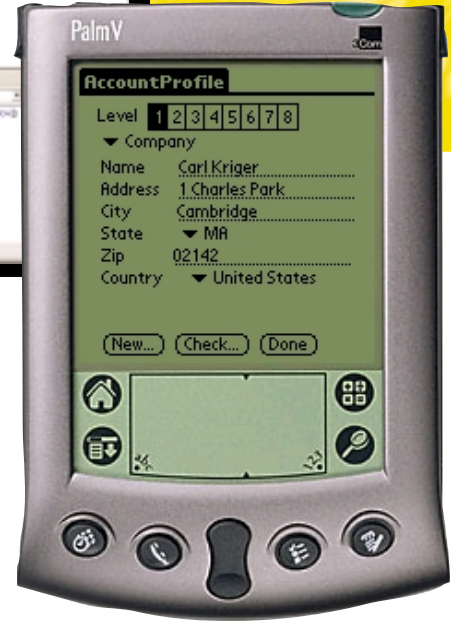

The sync services — based on industry standards such as XML and SyncML — enable mobile workers to work off-line and synchronize applications and data between Domino servers and PDAs, regardless of the type of connectivity.

The application development tool lets you easily and securely create custom mobile applications that connect to your Domino enterprise data from mobile and wireless devices, including those on the PalmOS, Windows CE/Pocket PC and EPOC platforms. This development tool builds a mobile application framework to rapidly extend Domino-based business applications or create new applications for PDAs using Lotus' flagship development environment, Domino Designer.

The Domino Everyplace Enterprise offering also includes the Mobile Notes client to deliver Lotus Notes® application functionality to a variety of popular handheld devices.

Use Domino Designer to create mobile applications that include features such as: form action buttons, combo boxes, drop-down lists and graffiti support.

Part of the Domino Everyplace family.

Domino Everyplace Enterprise server is part of the Domino Everyplace server family which, together with the Lotus Mobile Notes client, provides organizations with a complete solution to easily develop and implement applications that extend their existing Domino infrastructure to the full spectrum of mobile and wireless devices.

How to get started.

The Lotus Wireless Solutions Portfolio, available from Lotus Professional Services (LPS) worldwide, includes a wide range of offerings that make it easy to start implementing your Domino Everyplace business strategy and infrastructure. These flexible modular offerings range from Strategy and Awareness seminars that help you understand the technology and define your wireless business strategy, to Pilot programs with everything you need to get a wireless pilot up and running quickly, to full-scale mobile application development and deployment. For information on the Lotus Wireless Solutions Portfolio contact your local Lotus Sales representative and/or visit our mobile web site listed below.

System Requirements.

- Microsoft Windows NT 4.0/Windows 2000
- Lotus Domino 5.06a or higher
- Lotus Domino Designer 5.06 or higher
- Lotus Notes 5.06 or higher
- Supported Platforms: PalmOS, Pocket PC and EPOC platforms
