Disclaimer

This Guide to Identifying Your Processor Family (“Guide”) is provided for your convenience and is meant to be used solely as an aid to assist you in understanding some of the data needed to apply IBM’s Processor Value Unit software pricing. Errors in the guide are unintentional and will be addressed promptly upon being brought to IBM's attention. Should any such errors occur, this does not relieve customers from their responsibility to obtain licenses for, and to be in compliance with, the required level of authorized use for each product.

Overview & How to Use this Guide

- This guide is an assistant to help identify the major processor families and their corresponding Value Units (VUs) per Processor Core.
- The guide helps clarify market inconsistencies across the major server brands when defining a “processor” or “N-Way”
- Processor Family Identification Support tables are arranged by Server Brand

Definitions

- IBM® Software Group defines a Processor as a Core
 - ▶ IBM licenses Value Units per Processor Core
- Hardware vendors differ when defining the terms “Processor” and “N-Way”

Server Vendor	Define Processor as:	Define N-Way as:
IBM System p / System i	Core	Number of Cores
	Core	Number of Cores
HP 9000		
IBM BladeCenter	Chip	Number of Chips
IBM System x	Chip	Number of Chips
Dell PowerEdge	Chip	Number of Chips
Fujitsu	Chip	Number of Chips
HP	Chip	Number of Chips
Sun	Chip	Number of Chips

Processor Family Identification Steps

Depending on the level of information known, there are two alternate ways to identify the number of PVUs per Core:

- **Method 1**
 - ▶ Processor Vendor and Brand, and Processor Type are known. Use the Processor Value Units per Core Table (page 7).
 - ▶ Eg. IBM® POWER5™ Dual-core: *100 VUs per core.*
- **Method 2**
 - ▶ Processor Vendor and Brand, and Processor Type are not known. However, server information is known. Use the attached detailed guide.
 - ▶ Eg. IBM® System x 3500: *Intel® Xeon® Dual-Core at 50 PVUs per Core*

Server Information		Processor Family Information		
Server Family	Server Model	Processor Vendor & Brand	Processor Type	PVUs Per Core
System x	3400	Intel® Xeon®		
System x	3455	AMD Opteron		
System x	3500	Intel® Xeon®	DC	50
System x	3550	Intel® Xeon®		
System x	3650	Intel® Xeon®		
System x	3755	AMD Opteron		
System x	3800	Intel® Xeon®		
System x	3850	Intel® Xeon®	SC	100
System x	3650 T	Intel® Xeon®		
System x	3950	Intel® Xeon®	SC	100

Processor Value Units (PVU) per Core – By Processor Family

(i. e., Method 1)

Table: Processor Value Units (PVUs) per Core

Processor ¹ Families		Number of cores	Processor Type					PVUs per Processor Core
Vendor	Brand		Single-Core	Dual-Core	Quad-Core	Hexa-Core	Octi-Core	
IBM	POWER6	2	■					120
IBM	POWER5	2	■					
Fujitsu	SPARC64 VI	2	■					
HP	PA-RISC	2	■					
Intel®	Itanium®	2	■					
Sun	UltraSPARC IV	2	■					
IBM	System z	1	■ ²					
Any	Any single core	1	■					
IBM	PowerPC 970	2	■					
IBM	POWER5 QCM	4		■				
AMD	Opteron	2,4	■	■				
Intel®	Xeon®	2,4	■	■				
Sun	UltraSPARC T1	4,6,8		■	■	■	■	30

Notes: ¹IBM SW defines "Processor" as a Core

²One IFL or engine

Processor Value Units – By Server Brand and Type

(i.e. Method 2)

- Locate your server to identify the Processor Family and PVUs per core.

IBM® System x / xSeries	9
IBM® BladeCenter	10
IBM® System p / System i	11
HP Proliant	12
HP Proliant BladeSystem	13
HP Integrity	14
HP 9000 Server	15
Sun with AMD Opteron	16
Sun SPARC Enterprise / Fire / Netra	17
Dell PowerEdge & Blade	18
Fujitsu SPARC Enterprise / PRIMEPOWER / PRIMEQUEST	19
Fujitsu PRIMERGY	20

IBM System x (xSeries) – Processor Family Identification Support
