

IBM Program usage and installation report instructions

Tivoli Key LifeCycle Manager Help Guide

Please see below the additional help in collecting deployment information for your IBM Software. (You may need to zoom in to more easily view the screenshots.)

Depending on which platform you are using, please run one of the following commands on your Tivoli Key LifeCycle Managing servers to pull up the wsadmin tool:

- a. AIX, HP-UX, Linux, Solaris, z/OS:
Wsadmin.Sh -lang jython
- b. Windows:
Wsadmin.bat -lang jython
- c. IBM i:
wsadmin -lang jython

Then please run this second command and provide the final output in a text file or as a screenshot:
print AdminTask.tklmDeviceList(['-v y'])

You can invoke wsadmin commands in batch or interactive mode, in a script, or from a command prompt using the wsadmin -c command.

Sample Output:

```
wsadmin>print AdminTask.tklmDeviceList (['-v y'])
CTGKM0001I Command succeeded.
Description = salesDivisionDrive
Serial Number = CCCB31403AFF
Device uuid = DEVICE-5023fd36-cf2a-4406-80cc-fc2ed4065460
Device type = DS8K
World wide name = 61041
Key alias 1 = certb Key |
alias 2 = certb
```
