Before Agile Software development...

The period that's now known as the dark ages...many organizations that were suffering from the inefficiencies that were resulting from... too much bureaucracy, too much paperwork which increases your costs and slows things down.

Whereas the Agile teams are more focused on delivering real business value. So agile teams are better at delivering higher quality, at delivering stakeholder satisfaction, at producing greater return on investment, at delivering on-time.

This leads to the higher levels of success that we see in agile compared to traditional. Agiles work smarter not harder.
