

IBM Netezza – Datawarehouse solution and business analytics or why customers' complex problems should have a simple solution

Appliances make it simple, completely transforming the user experience.

- Dedicated device
- Optimized for purpose
- Complete solution
- Fast installation
- Very easy operation
- Standard interfaces
- Low cost

What is a Data Warehouse?

- A Data Warehouse is required to manage the data used for business analytics
- The Data Warehouse must be designed, configured and maintained to deliver required performance and levels of:
 - **Data** (Scale)
 - **Users** (Concurrency)
 - **Queries** (Complexity)

Transactional Workloads vs. Analytic Workloads

Two VERY different requirements for storing and processing data

days for a single query

constant tuning

***Nearly 70%** of data warehouses
experience performance-constrained issues
of various types.*

- Gartner 2010 Magic
Quadrant

specialized resources required

months to deploy

Traditional data warehouses are just too complex

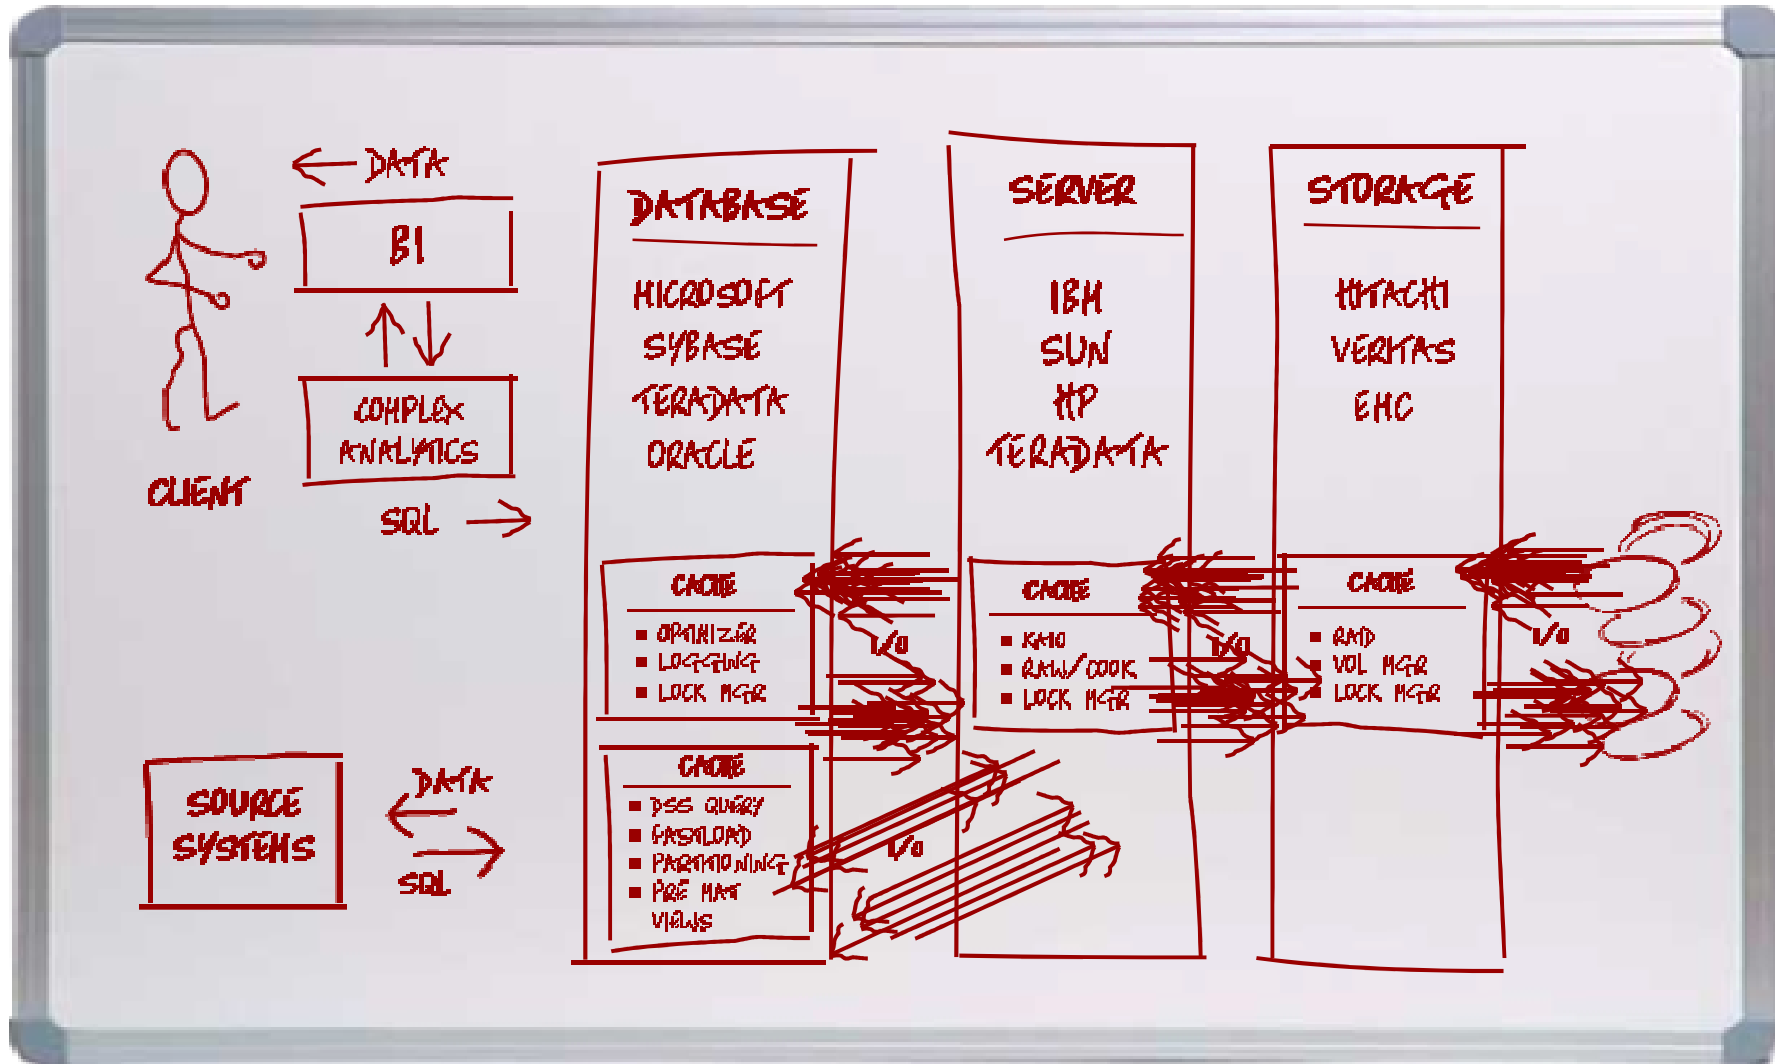

They are based on databases optimized for transaction processing—**NOT** to meet the demands of advanced analytics on big data.

- Too complex an infrastructure
- Too complicated to deploy
- Too much tuning required
- Too inefficient at analytics
- Too many people needed to maintain
- Too costly to operate

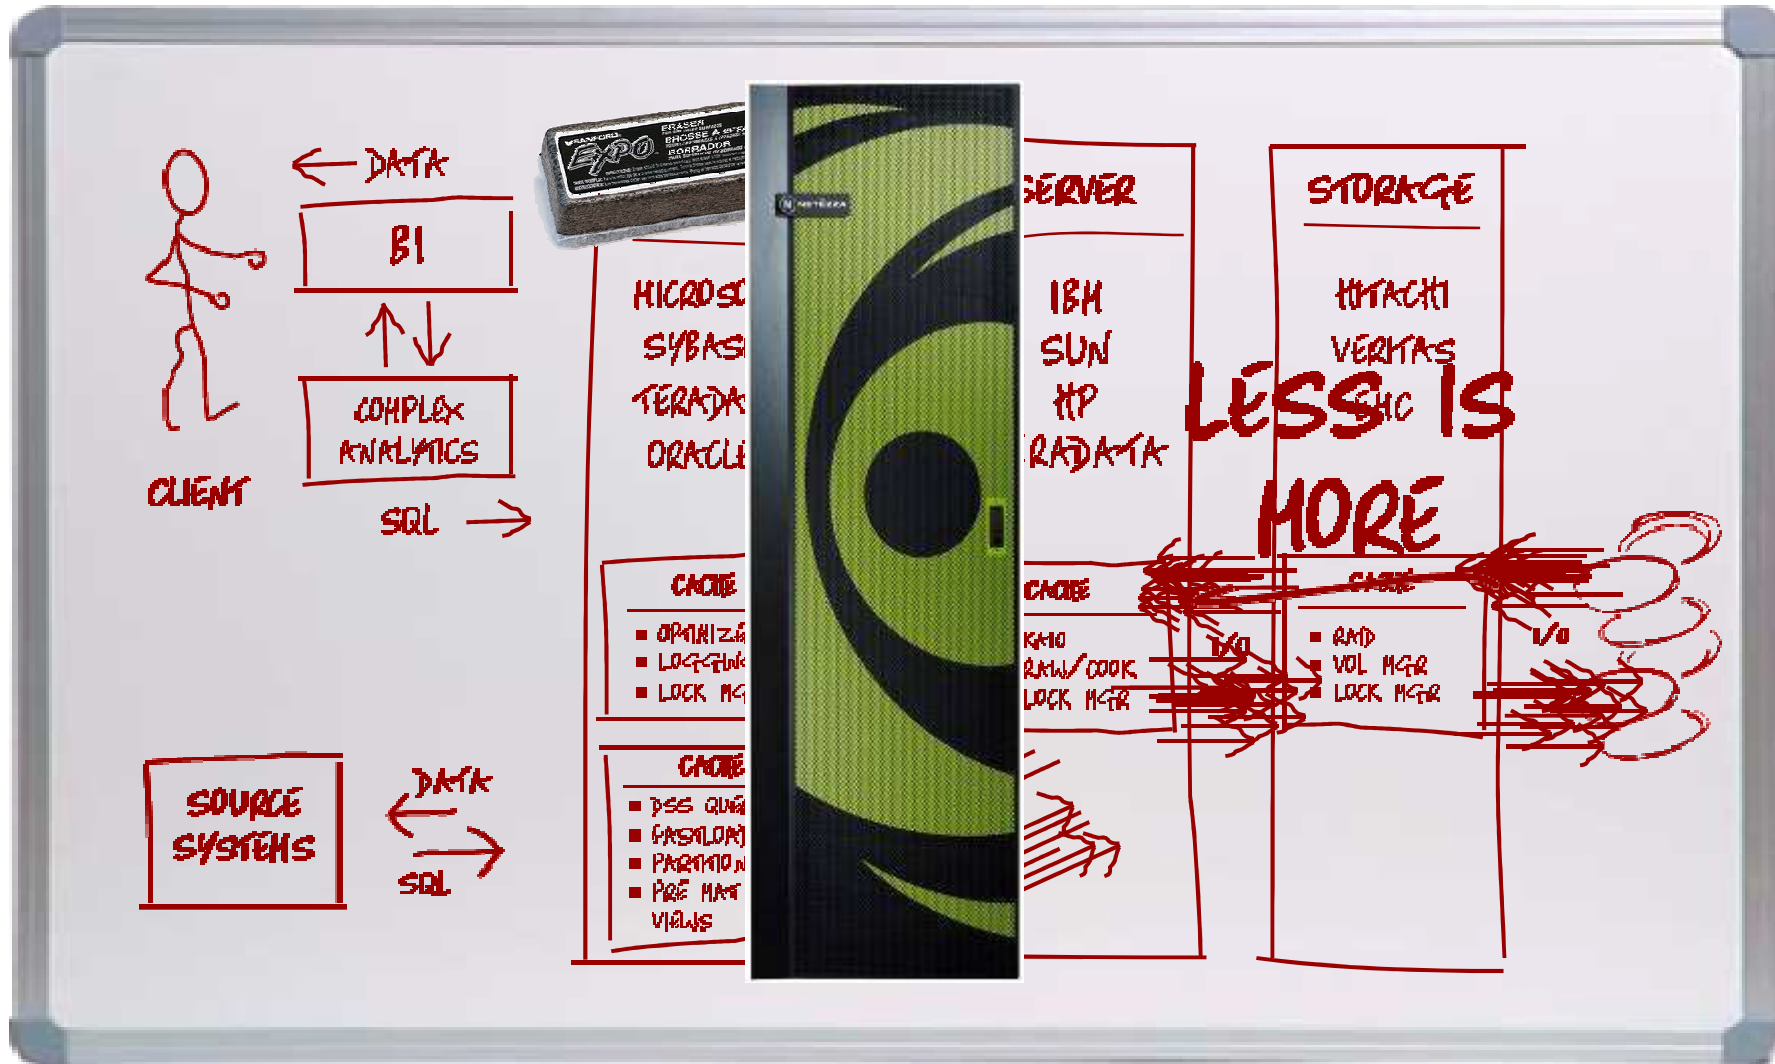

Too long to get answers

Traditional Data Warehouse Complexity

Netezza Simplicity & Ramifications on TCO *Telecom Retailer and Service Provider*

Telecom Call Detail Record FACT (6 billion rows)	Oracle Object Count*	Netezza Object Count
Tables	1	1
Indexes	12	
Table Partitions	47	
Index Partitions	564	
Table Partitions tablespaces	47	
Index Partitions tablespaces	47	
Table Data Files	170	
Index Data Files	122	
TOTAL	1,010	1

“Look at all the weeks/months worth of effort, DBA design and maintenance that we don't have with Netezza.”

*: Oracle data does not account for ADDITIONAL effort required in configuring and engineering the file system design to accommodate this index management scheme.

Performance Tuning Dramatically Simplified

- NO dbspace/tablespace sizing and configuration
- NO redo/physical log sizing and configuration
- NO journaling/logical log sizing and configuration
- NO page/block sizing and configuration for tables
- NO extent sizing and configuration for tables
- NO temp space allocation and monitoring
- NO RAID level decisions for dbspaces
- NO logical volume creations of files
- NO integration of OS kernel recommendations
- NO maintenance of OS recommended patch levels
- NO JAD sessions to configure host/network/storage
- NO software to install
- ONE simple partitioning strategy: HASH

Benefits

Instead of spending time and effort on tedious DBA tasks, use the time for higher BUSINESS VALUE tasks:

- Bring on new applications and groups
- Quickly build out new data marts
- Provide more functionality to your end users

Opportunity Qualifiers

Line of Business

- I can't analyze **ALL my data** – I have to sample or summarize
- I have a report that takes **three days** to run
- I have to “**dumb down**” the problem to fit the data warehouse
- My analyses are conducted on **stale and outdated** data
- I need to **involve IT** for every new report or query

IT

- I cannot keep up with **growing data, users** and applications
- We **regularly miss SLAs** for data freshness/availability
- Ad-hoc and analytic **queries take too long** or just not possible
- I have a **backlog of pending applications** projects
- I need to do more with less

Meaningful Proof Of Concept in 2 Weeks

- Customer's data onsite
- "Real production" workload and concurrency
- **Full access** and ad-hoc testing
- Out-of-the box performance with **minimal tuning**
- Integration with 3rd party BI, ETL, Backup, etc. tools

- **No risk to customer**

A true appliance drives

speed that transforms the business

“ nielsen

...when something took 24 hours I could only do so much with it, but when something takes 10 seconds, I may be able to completely rethink the business...

- SVP Application Development,
Nielsen

”

A true appliance drives lower cost of ownership

Our data warehouse team consists of one to two employees that we need once every three months, to do small changes for release verifications.

- Mark Saponar, CIO, iBasis, a KPN Affiliate

A true appliance drives

much easier and faster deployment

eHarmony

“

They shipped us a box, we put it into our data center and plugged into our network. Within 24 hours we were up and running. I'm not exaggerating, it was that easy.

”

- Joseph Essas, Vice President of Technology,
eHarmony

Telco Success: Subscriber Data Mgmt

Problem

3-8 hour data loads per division & slow queries prevent iterative analysis needed for marketing campaign & customer migration analysis

Effect

Trouble improving customer churn and enhancing marketing cross-sell/up-sell campaigns

Implementation Scope

Customer Value Creation (CVC) + Openet Subscriber Data Mgmt databases powered by Netezza

20TB (growing to 200+ TB)

40 DBAs on Oracle; 3 DBAs on Netezza

Improvement Metrics

18 hour batch reporting reduced to 55 minutes

Data loads across all divisions take 45 minutes

Collect & analyze TV tuning events, VOD/PPV usage, ad insertion & programming data with offline data

Result

Customer segmentation & product/feature adoption analytics enabled

360° near real time view of Sales & Marketing data

Real-time viewing metrics based on **actual viewership data**, not sampling

Digital Media

Financial Services

92% referenceable

Government

Health & Life Sciences

Retail / Consumer Products

67% repeat business

Proof Of Concept: Query Performance

- POC for a leading direct marketing services company
- Configuration: TwinFin vs. Oracle v10.2.3 RAC
- Results: TwinFin executes BI queries **89X faster than Oracle RAC**

Time to Deployment

Netezza TwinFin appliance dramatically reduces all three phases of Data Warehousing deployment

Why IBM Netezza over Conventional DW?

Typical Budget Outlay for BI Project

Budget Allocation with IBM Netezza architecture

- Larger budget allocation for application & asset development
 - Budget shift to strategic, value added activities
 - More visibility within the organization
 - Increased application services with better rates
 - Reduced low end IT oriented services

What Netezza solution offers customers is more SSSS for less
\$\$\$\$

- **Speed:** Price-performance leadership on the market
- **Scalability:** Solution from data mart level to enterprise-wide ones
- **Simplicity:** Rapid time to value & lowest TCO
- **Smarts:** High-performance advanced analytics
