

IBM Connected 2013

Her Deneyim Bir Kazanım

#connected

Farklı roller

Farklı uzmanlıklar

Uyumunda buluşuyor

Hiçbir ürün
tüm gereksinimleri karşılayacak kadar
mükemmel değil

O halde;

Standartlara uyumlu olmalı, kolay yapılandırılabilirmeli

Entegrasyona ve Geliştirmeye açık olmalı

Akışlar beklenmedik sıklıkla değişebiliyor

 - Timelines

Workflows

Define work item state transitions (workflows). Workflows are built of States, Actions and Resolutions. To add an Action, define at least two States in the States table. Then select 'New Action...' in the desired combo of the Transitions table. Specify one of the groups (open, in progress, closed) to the states to provide the necessary context to the system.

Final (ignore customization of this data in child project areas)

Choose the Workflow to edit:
Halkbank YGDB Workflow

[Check usages of this workflow in the repository](#)

Transitions

From	To	Resolution	Action
<input checked="" type="checkbox"/> Kapandı - Closed	<input checked="" type="checkbox"/> Uzerinde calisiliyor - In Progress	None	Yeni - New
<input checked="" type="checkbox"/> Kapandı - Closed	<None>	None	None
<input checked="" type="checkbox"/> Uzerinde calisiliyor - In Progress	None	<None>	Çalışmayı Bırak - Stop Working
<input checked="" type="checkbox"/> Yeni - New	None	Çalışmaya Başla - Start Working	<None>
<input checked="" type="checkbox"/> Yeniden Acildi - Reopened	None	Çalışmaya Başla - Start Working	None
<input checked="" type="checkbox"/> Sonuclandirildi - Resolved	<input checked="" type="checkbox"/> Kapat - Close	None	None
<input checked="" type="checkbox"/> Ertelendi - Triaged	None	Çalışmaya Başla - Start Working	Öne alındı - Untriaged
<input checked="" type="checkbox"/> Kontrol edildi - Verified	<input checked="" type="checkbox"/> Kapat - Close	None	None

States

Configure the States for this Workflow. For each State, set the order in which Actions will appear throughout the user interface.

Name	Group	Show resolution	Description
<input checked="" type="checkbox"/> Kapandı - Closed	Closed	<input checked="" type="checkbox"/>	
<input checked="" type="checkbox"/> Uzerinde calisiliyor ...	In Progress	<input type="checkbox"/>

Actions

Politikalar da ...

Source Control							
Deliver (client)							
Deliver (server)							
Deliver Phase 2 (server)							
Modify Component (server)							
Save Change Set Links and Comments (server)							
Work Items							
Delete Work Item (server)							
Save Work Item (server)							

The deliver operation is performed when changes or baselines are delivered from a workspace to a stream.

- Preconditions and follow-up actions are configured for this operation
- Final (ignore customization of this operation in child areas)

Preconditions (9 available):

Descriptive Change Sets

- Add...
- Remove
- Up
- Down

Name:

Fail if not installed

Description:

User may overrule

All change sets should be associated with a work item which is planned for the current iteration.
This makes it easier for the team to track its progress through the iteration and allows

Constraints:

On deliver, change sets require:

- a comment or change request link
- an associated work item
- any
- all

Work item owner:

- is optional
- is required
- must be current user

Iteration work item is planned for:

- is optional
- is required
- must be current iteration

Follow-up actions (0 available):

- Add...
- Remove
- Up
- Down

▼ **Operation Behavior**

Select a cell in the table below to configure the preconditions and follow-up actions for the corresponding operation and role.

Preconditions are checked before running an operation; follow-up actions are executed after. An operation's preconditions and follow-up actions can be configured differently for each role. Note that operation configurations completely replace each other; they are not additive. The process runtime will choose the most appropriate operation configuration for the logged-in user and will use only the preconditions and follow-up actions defined in that configuration.

Mevcut templateelerde bir değişiklik yapılmayacak olup
SMQB template kullanan programlar için yeni bir JCL oluşturulmuştur.
PL/1 ve Cobol uygulamalarının object kodlarının alınabilmesi için yeni datasetler create edilmiştir (

What you can do: Getting started

When you engage with us, you can help drive the direction of your tools so that you can get the most out of your usage.

- 1 Go to a specific product page to see the latest development activity, review current iteration plans, and try the latest milestones.

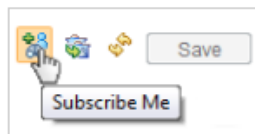

Explore products

- 2 Ask and answer questions in the [Forum](#) and see the latest activity on your favorite tags.

- 3 Submit bugs and enhancement requests.

Submit a bug

- 4 Subscribe to the bugs you're interested in, and give feedback on items to help us prioritize.

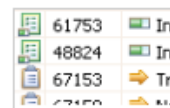

- 5 Use the [Work items](#) page to track your open items and see latest activity on the items you're following.

- 6 Personalize [your dashboard](#) for a totally customized view into our development.

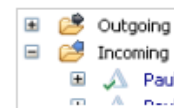

How we work

We use our own tools

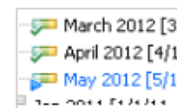

All of our daily development efforts happen here on Jazz.net, where we use *the latest versions* of our Jazz-based products to do our work:

Task tracking

Source control

Agile planning

Status and plans

Each [product](#) has its own "What's happening" page where we publish updates and seek your feedback. This page also links to the latest iteration plans and team dashboards in the Rational Team Concert interface.

Agile and iterative

We follow an iterative, agile process, seeking your feedback early and often (continuously) during the development process.

Downloads

At the end of each iteration, which usually are about 8 weeks long, we publish a new milestone for you to [download](#) and try.

Bir adım ötesi;
çözüm sürecine dahil edilmek

Summary: * If A member of a nested team is not defined in project members level he has no permissions

1. Jean-Michel Lemieux 25 Mar 2010 07:26:11

There is an article that explains why this is happening (<http://jazz.net/library/article/32>). When you create artifacts they are owned by the affected team. In the case of work items, this is tracked by the "Filed Against" attribute which maps to a category and then a team.

I'd double check who the tasks/work items are being assigned to.

If you have a customer id our @support team can walk you through the setup steps to make this work for you.

2. Medet ÖZELLİ 25 Mar 2010 18:45:12

Our customer id is 0361000 Halkbank

3. Eric Jodet 26 Mar 2010 11:31:03

Hello @medeto,
See: http://publib.boulder.ibm.com/infocenter/rtc/v2r0m0/topic/com.ibm.jazz.platform.doc/topics/c_permissions.html
and <http://jazz.net/library/article/137> - Process Permissions section.
