## Smart Solution, Distinctive Service

We provide services and solutions to our customers on consultancy, server and storage, network and security, operating systems and virtualization, backup and business continuity, outsourcing, maintenance and support with our trained and experienced team.

Our solutions are smart, aim best use of resources, have high quality and can be managed, and provide efficiency and continuity.

Our services are distinctive and enable you to focus on your business by providing an information technology infrastructure that works uninterruptedly.

2

## Our Corporate Infrastructure Services

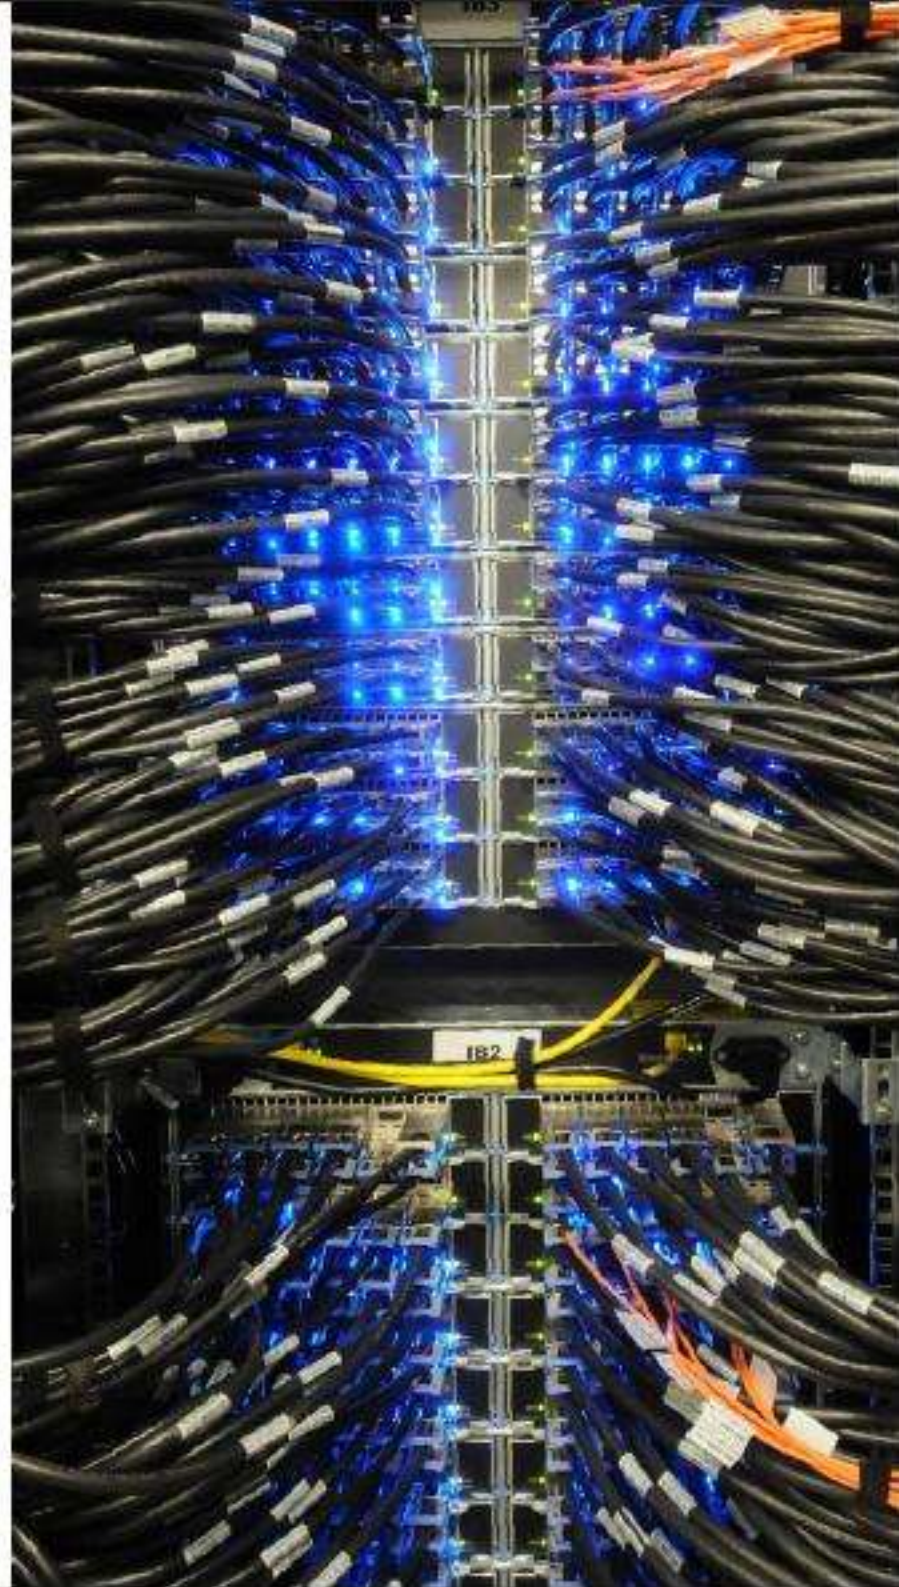

### Structural Cabling and Network Solutions

Today's high speed and high capacity, active information technology systems and hardware require functional infrastructures that will support these properties. Novatech International structural cabling solutions are performed using Copper and/or Fiber Optic cables. While determining cable type, obtaining suitable speed and bandwidth for the purpose is considered as well as factors such as ease of implementation and cost.

### Electrical Infrastructure Solutions

In infrastructure systems, electrical (network and UPS) distribution is at least as important as data cabling. Therefore, we perform UPS (Uninterruptible Power Supply) distribution systems, network electrification distribution systems, distribution panels design and assembly, grounding systems installation, measurement and maintenance with our specialized team.

3

## Desktop and Laptop Solutions

Together with the world's leading Desktop and Laptop manufacturer Lenovo, we provide solutions to our valuable customers.

## Our Corporate System Services

### Server Solutions

Novatech International provides you to reach the most proper server solution with the title of IBM SystemX Specialty.

You can obtain flexible corporate server solutions that offer the highest level of memory, storage and performance for your most challenging applications, and obtain Blade solutions that provide you the opportunity of optimum server consolidation.

You obtain a performance beyond the limits of previous x86 servers by means of next generation server solutions and developments in memory upgrade. IBM eX5 systems offer outstanding performance with low cost for your corporate level virtualization, database and business processes.

### Data Storage Solutions

Our customers, who try to overcome the difficulties caused by current information explosion with their restricted BT budgets, need smart systems that will help reducing management complexity while raising the bar in efficiency, performance and cost saving. IBM and Novatech International provide storage solutions to answer these needs and to help customers get faster return on their investment.

Our solutions that enable fast improvement in storage efficiency. Accelerate deployment and return on investment with IBM® Storwize® Rapid Application Storage solution.

Benefit from an integrated solution with IBM Implementation Services for IBM Storwize Rapid Application Storage service package

With IBM Real-Time Compression, compress primary online data real-time and store up to 5 times more data without causing any performance degradation.

## Virtualization Solutions

Novatech International optimizes total server efficiency through partitioning your physical server resource into as many logical parts as you want with virtualization solutions.

VMware ESX Server that we use for Virtualization Solutions is the virtual machine software developed for high performance Intel servers. It is directly installed on the server hardware and the logic behind it is to turn physical systems into a computer pool. Each virtual server functions and is managed as a real server that can be isolated from others and can have a different operating system. ESX Server dynamically allocates hardware resources to each virtual server in the most optimum way.

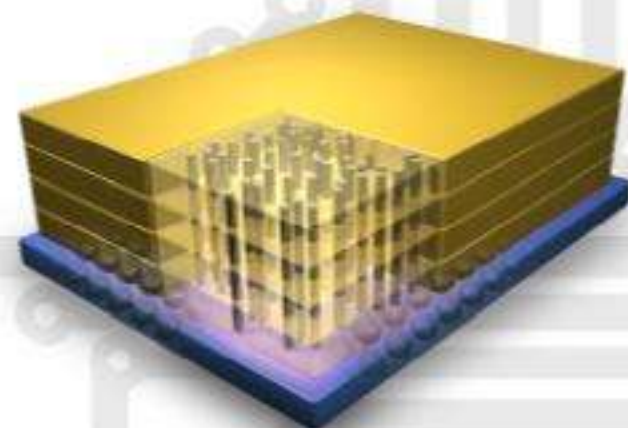

Depending on your hardware resources, we can install up to 8 virtual servers per CPU. You can significantly decrease your operating costs with our solutions. You can obtain low cost high usability. You can easily transfer copy of your virtual machines between environments. Thus, software developers and quality control engineers can perform more efficient tests and can create fast solutions using less time and hardware.

You will guarantee maximum use of system resources such as CPU, memory, network bandwidth etc. You will buy new hardware only when really necessary. You can manage all your virtual systems from a single point with the VMware Virtual Center program. With vMotion technology, you can carry your virtual machines that are installed on a SAN onto another ESX even when the application on it is running. Thus, you do not have to turn off your servers even during maintenance. VMware ESX Server is recommended to be installed on tested servers.

## Backup Solutions

Data is the heart of every scale of organizations in the business world. You need a complete data backup and recovery system solution in order to be able to access critical data whenever you need. Data backup should not be obtained through storing it in storage systems that are in the current media connected to the systems. Storage should be used for accessing and managing live data of the applications used on the network rather than backup. The data in these systems should definitely be stored on magnetic cartridges in secure environments inside and/or outside the company through creating backup strategies considering all kinds of hard time risks such as fire, flood, theft etc. that can happen in the company.

Being a business partner of backup software vendors that are recognized by middle and large scale companies all over the world, Novatech International provides backup solutions by creating backup and data management strategies specific to information systems of companies. Backup Solutions include creating a structure strategy accommodating to current and future situation of the company, integration and management of this structure, and 24x7 service-support facilities through analyzing companies' current situation.

6

## Replication Solutions

Your corporate business applications run on databases. All information required for supporting your customers with real time answers, generating latest metric and financial reports for directors, providing your vendors and agencies with instant critical information is stored on databases. Replication is the process in which your database that is extremely important for your company transfers data to a secure environment and does not get affected by disaster situations.

We provide hardware and software based solutions suitable for the needs of our customers for replication in remote or local network connection.

7

## Our Corporate Operating System Services

### Our Microsoft Services

As Novatech International, we provide proper deployment, licensing, installation and support services for operating system, messaging, virtualization, business continuity and network management technologies that Microsoft offers for information technology infrastructures.

### Our Linux Services

Linux is an open source code operating system that is chosen as a server by many leading companies throughout the world. We provide proper deployment, installation and support services for operating system, messaging, virtualization, business continuity and network management technologies that open source Linux world offers for information technology infrastructures.

## Security Solutions

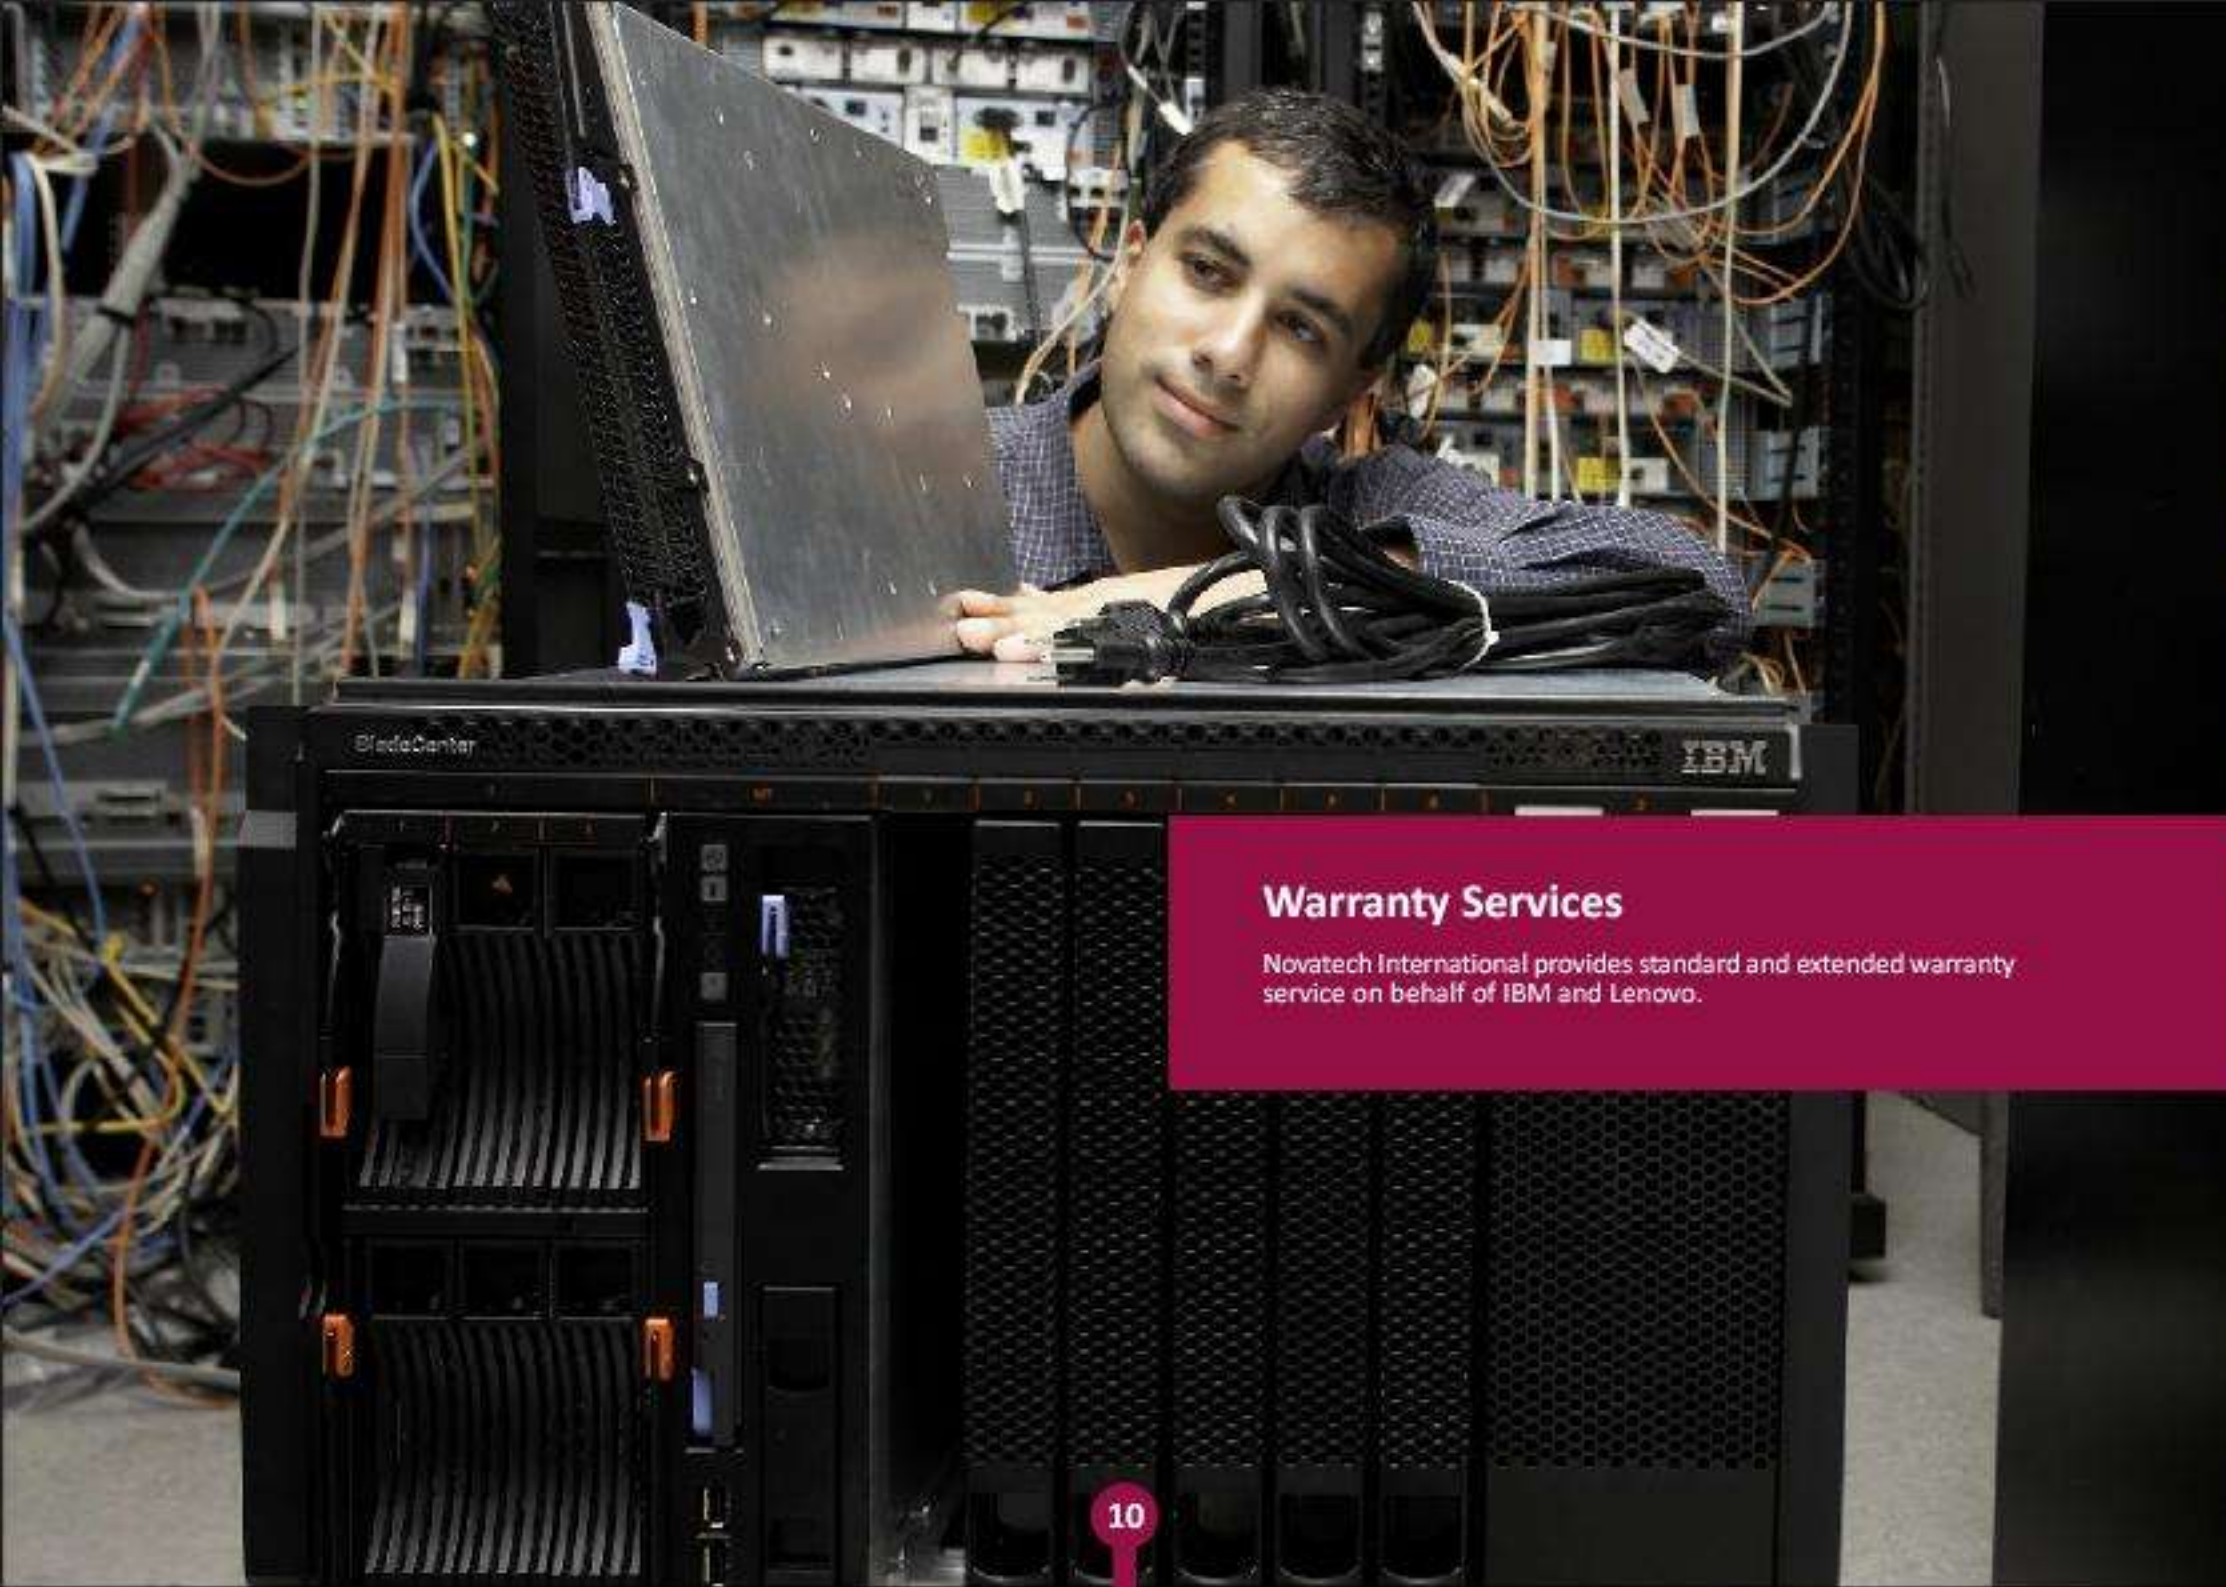

### Network Security Solutions

Communication is at the heart of technology today and brings about a security requirement as well. We provide the best infrastructure products and solutions for local and remote network connection security, and wired and wireless network access security.

### Internet Security Solutions

As Novatech International, we make internal internet use secure with solutions such as protecting essential and critical data of institutions and organizations, preventing use of corporate network out of work, filtering or timing web pages with undesirable content, logging all logins and logouts and using them in favor of the institution in a possible situation.

### Warranty Services

Novatech International provides standard and extended warranty service on behalf of IBM and Lenovo.

## Corporate Maintenance and Support Services

### Maintenance and Support Agreement Services

Overall services provided in the scope of agreed service agreement. With the Service Agreement, we help our customers to keep the whole or part of an information technology system functional and provide them maintenance and support services.

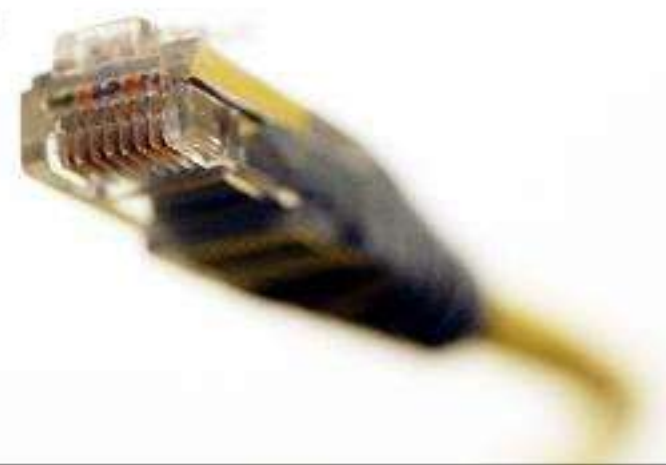

The service can be provided both on-site and with remote access or phone support.

### Outsourcing Services

Outsourcing provides corporations that need to focus on their major activities in today's competitive environment the opportunity to differently manage their financial functions which are out of their major activities, on which they have limited expertise, which they cannot invest in adequately or manage effectively but are highly important for the future of the corporation.

A correct outsourcing approach determined within the framework of needs and expectations provides corporations the opportunity to focus on strategic points in cooperation with a qualified service provider as well as offering various benefits such as decrease in costs, legislative harmonization, fast and high-quality service supply, control of risks, obtaining a flexible structure that can adapt changing conditions.

Novatech International directs its qualified personnel as full time or part time for this job. In the companies that we provide service, each of our personnel has a substitute personnel kept available with rotation and collaboration. Thus, non-stop service is provided.
