Tivoli's New Foundations Appliance Solutions

It's all about.. '*consumability*'

Agenda

- **The Marketplace & Demand**
- **Tivoli Appliances Overview**
 - TFAM
 - TFSM
- **Q & A**

Business Process Problems Faced by Mid Market Customers

Optimize and Automate

How can I optimize and automate my IT and service processes and quickly resolve an incident and restore the service?

Troublesome Equipment

How can I identify equipment that is hindering my business?

Prioritization on Impact

How can I prioritize incidents according to their urgency and business impact?

Improve Service

How can I improve service levels while keeping cost down?

Measure Satisfaction

How can I see how satisfied my users are?

Business Impact

How can I assess the business impact of the tickets?

Offerings Designed and Priced for Mid-sized Organizations

Enable visibility, control and automation across all Business and IT assets

IBM Tivoli Foundations Solutions: Entry Points into IBM Service Management for availability and help desk

Increased Return on Investment
Easy Deployment – Plug & Play
Easy to Use Solutions
Integrated Disaster Recovery

Closed loop service management processes
operational in under one hour!

IBM Tivoli Foundations Service

Turn-key Service Request, Incident, Problem Management for the Mid-market

- “Service Desk in a Box”
- Requests for service
- Remote Diagnostics Tooling
- Self Service Knowledge Base
- Intuitive Reporting
- Best Practice Workflows
- Extends beyond IT services
- Operational in minutes

IBM Tivoli Foundations Application Manager

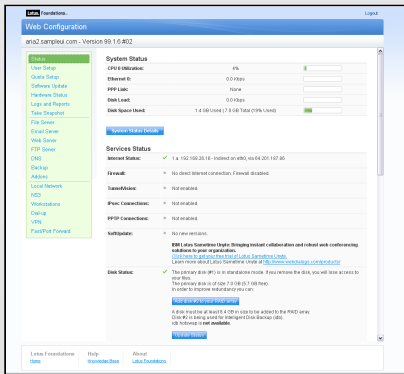

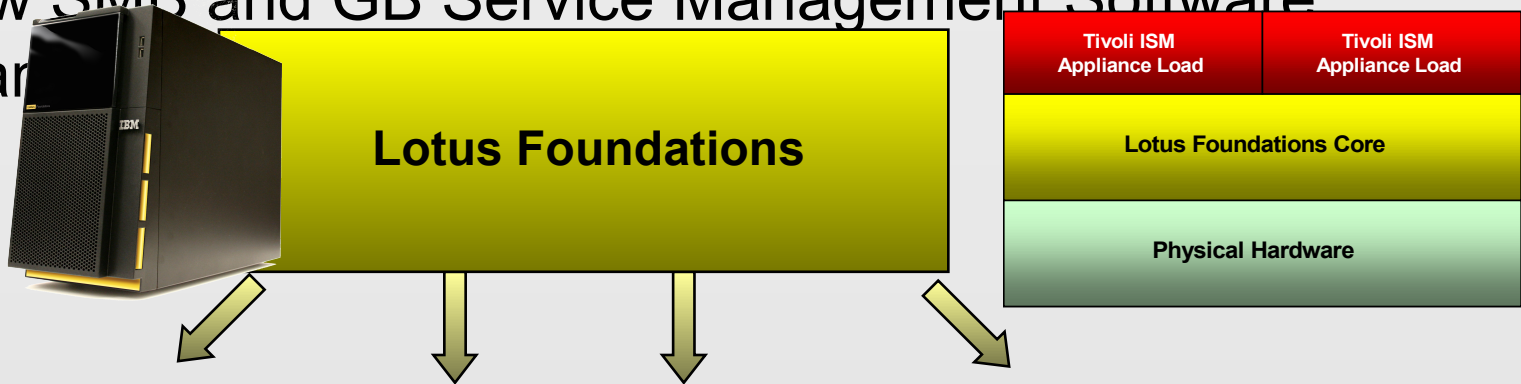

Turn-key Application Monitoring for the Mid-market

- “Application Monitoring in a Box”
- Asset Discovery
- Operating Systems, Email Servers, Databases, Virtual Servers, and Network
- Intuitive Reporting for both Real-time and Historical Data
- Automatic Problem Resolution
- Out of the Box Best Practices
- Operational in minutes

Partnering Across IBM to Delivery Tivoli Foundations

Tivoli is using Lotus Foundations as the delivery platform for its new SMB and GB Service Management Software Appliance

Standardized Server Configuration

Software and Firmware Patch Management

User and Group Access Controls

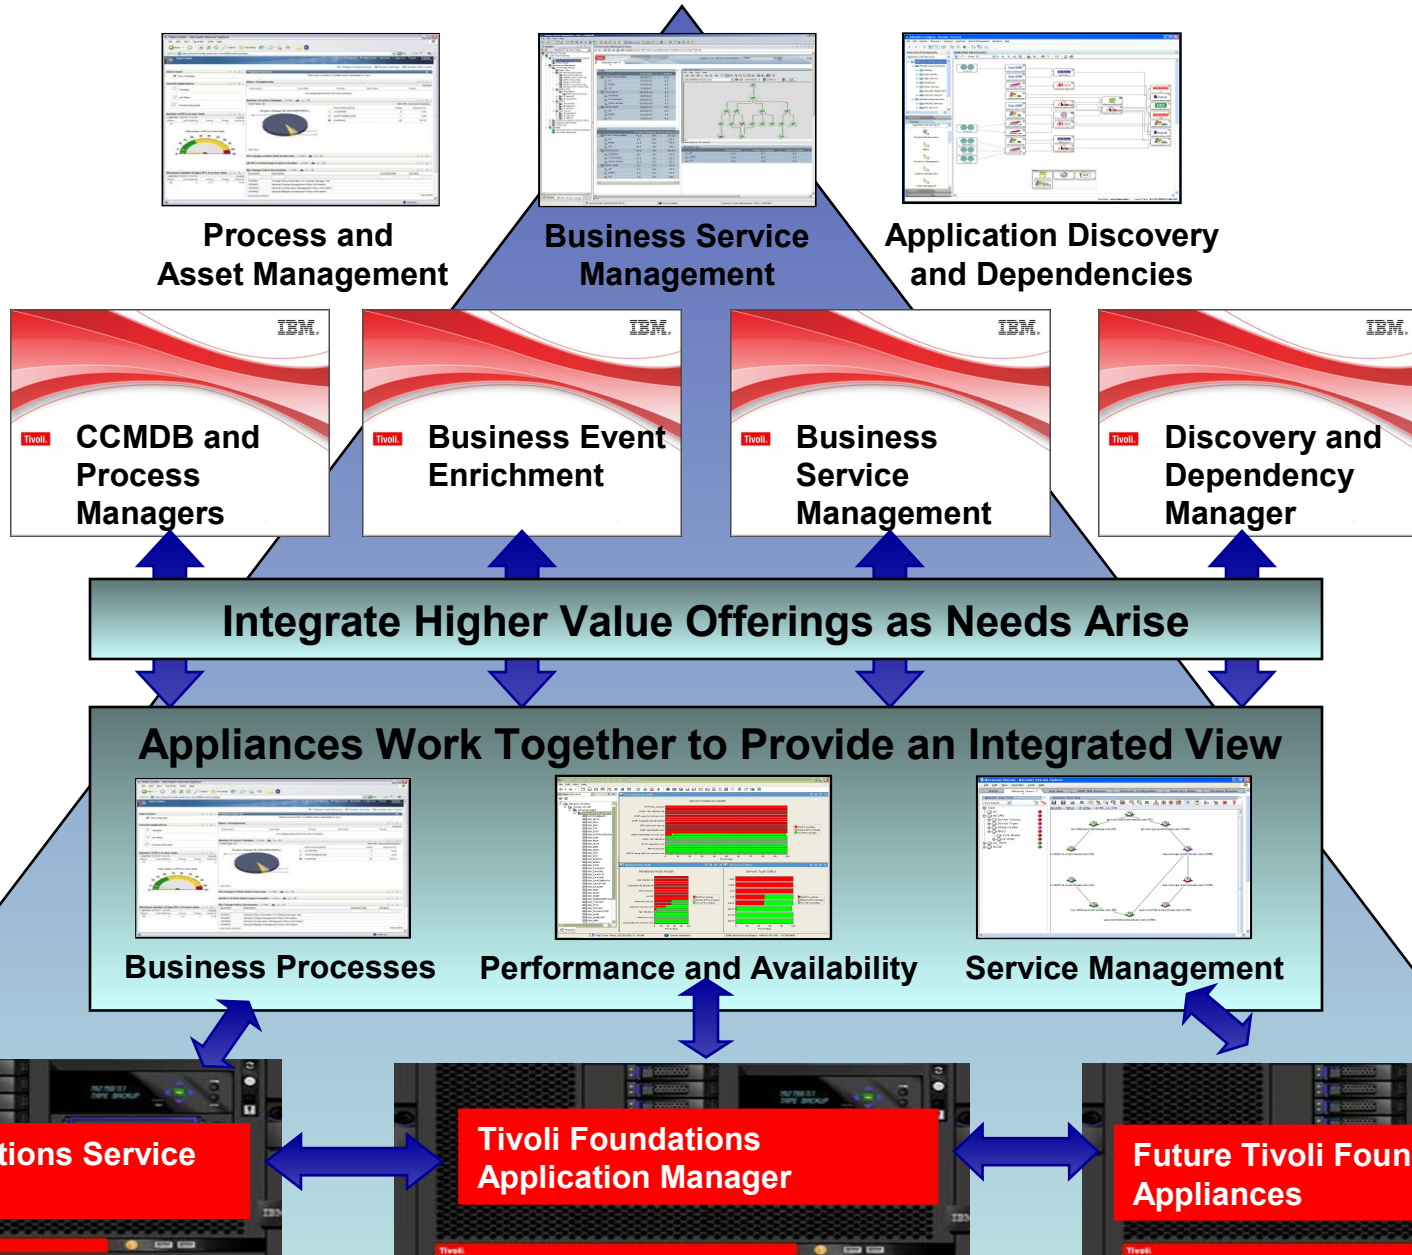

Remote Access

License Management

Appliances Combine to Provide Integrated ISM Value

Managing Application Availability to Increase Efficiency

IBM Tivoli Foundations Application Manager

Tivoli Foundations Application Manager (Software PID 5724-Y07)

Tivoli	Tivoli Foundations Application Manager 150 Managed Servers Max 25 Managed Network Devices Max
LOTUS	Lotus Foundations Start for TFAM

Included Functionality

- OS Monitoring
- Virtual Server Monitoring (VMware, Microsoft)
- Database Monitoring
- Email Monitoring
- Network Monitoring
- Automated Discovery
- Reporting & Alerting
- Data Warehousing
- Integration to TFSM Appliance

Included Functionality

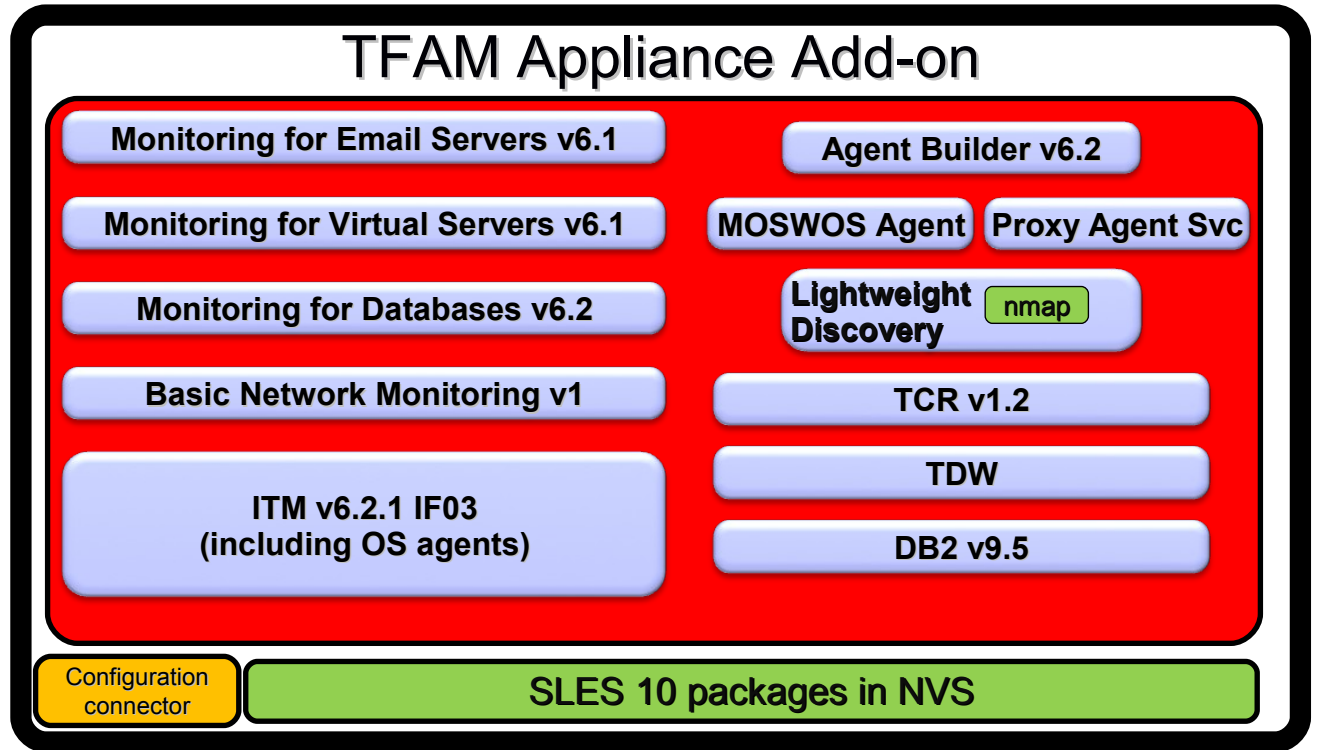

- Server Configuration
- Server and Firmware Management
- System Users & Security
- Remote Service Accessibility
- Firewall License Management

Hardware Ordered Separately

Under the hood: Software Stack

Launches TEP Java Client

Launches TCR/TIP Client In a browser window

Launches Lotus foundations Web Config UI in same window

TFAM Launch Pad (in TEP)

The screenshot shows a web browser window titled "Launch Pad Display - shakti.raleigh.ibm.com - SYSADMIN *ADMIN MODE*". The browser's address bar and menu bar are visible. The main content area is titled "Tivoli Foundations Application Manager" and is divided into three sections:

- Operational Tasks:** Contains five icons with labels: "Manage Events", "View System Availability and Performance", "View Application Availability and Performance", "View Network Performance", and "View Historical Reports".
- Administrative Tasks:** Contains five icons with labels: "Manage Situations", "Monitor Appliance Performance", "Monitor Warehouse Agent Configuration", "Discover Systems and Deploy OS Monitoring", and "Deploy Application and Network Monitoring".
- Discovery Status:** Shows a play button icon and the text "Discovery process is idle".

A green speech bubble on the right side of the interface contains the text: "Role specific tasks for major functions within the appliance".

The status bar at the bottom of the browser window displays: "Hub Time: Mon, 06/22/2009 01:58 PM", "Server Available", and "Launch Pad Display - shakti.raleigh.ibm.com - SYSADMIN *ADMIN MODE*".

Discovery features

The screenshot shows the 'Deploy Agent Display' interface with several key components highlighted by yellow boxes and callouts:

- Discovery controls:** Located in the top-left 'Discover' section, it includes a text input for 'IP addresses to scan' (with an example '192.168.1.1-23'), a 'Discover' button, and a 'Cancel Discovery' button.
- Status indicator:** A play/pause button in the 'Discover' section, with the text 'Discovery process is idle' below it.
- Results table:** A table in the 'Deploy' section listing discovered systems. The table has columns for Host Name, IP Address, OS Type, OS Version, Confidence, Managed, and Discovered At.

Discovery and OS Deployment

Before you can deploy monitoring to an operating system, you must discover the host on your network. To launch discovery, in the Discover section of the workspace enter a range of IP addresses you want to discover and click **Discover**. The discovered machines and network devices will be listed in the table in the Deployment section.

To deploy monitoring to an operating system, select the system you want to monitor in the discovered systems table, then select a type of monitoring to deploy. Tivoli Foundations Application Manager supports two types of monitoring:

- Agent-based monitoring* uses a physical agent placed on the target system and provides full performance monitoring.
- Agentless monitoring* uses SNMP over the network to monitor the system. Agentless monitoring provides basic performance monitoring.

Monitoring of operating system can be either agent-based or agentless, but if you intend to monitor applications on the same machine, you must use agent-based monitoring. Monitoring of network device uses only agentless monitoring.

To monitor the status of the deployment, click **Deployment Status**.

Host Name	IP Address	OS Type	OS Version	Confidence	Managed	Discovered At
9.42.29.33	9.42.29.33	Network_Dev		100	N/A	8/2/09 5:23 PM

9.42.29.39	9.42.29.39	Linux		100	N/A	8/2/09 5:23 PM

Deployment workspace

The screenshot displays the 'Deploy Application Monitoring' interface. The main window is titled 'Deploy Application Monitoring - vmpa01.tivlab.raleigh.ibm.com - SYSADMIN *ADMIN MODE*'. It features a 'Navigator' on the left, a central table for 'Deploy Application Monitoring Agent on System', and two tables for 'Application Agents Currently Deployed' and 'Network Agents Currently Deployed'. A yellow circle highlights a link in the first column of the system table. A callout box points to this link with the text: 'Select the link next to the system you want to deploy agents to.'

Deploying application and network monitoring

Deploying application monitoring agents

The Deploy Application Monitoring Agent on System table lists the systems on which an operating system monitoring agent has been deployed. (You cannot deploy application monitoring to a system on which agentless operating system monitoring has been deployed.)

To deploy an application monitoring agent to one of these systems, click the link for the target system in the Deploy Application Monitoring Agent on System table. The Navigator entry for the target system is displayed in the Physical Navigator view. Right-click the system name in the Navigator and select **Add Managed System** then select the application agent to deploy. See the user's guide for the selected application agent type in the [Tivoli Foundations Application Manager Information Center](#) for information on the required parameters. Note: You cannot deploy monitoring to an offline system.

After an application agent has been deployed, an entry for the agent appears in the Navigator tree along with its predefined workspaces and is listed in the Application Agents Currently Deployed table.

For more information, [Deploying application monitoring](#)

Deploying network monitoring

Hub Time: Thu, 08/06/2009 05:13 PM Server Available Deploy Application Monitoring - vmpa01.tivlab.raleigh.ibm.com - SYSADMIN *ADMIN MODE*

TCR with TFAM reports (running in TIP)

The screenshot shows the Tivoli Common Reporting (TCR) web interface. At the top, there is a navigation bar with the Tivoli logo, a 'View: All tasks' dropdown, a 'Welcome tipadmin' message, and 'Help | Logout' links. Below this is a breadcrumb trail 'Common Repo...' and a '--- Select Action ---' dropdown.

On the left side, there is a navigation menu with the following items: Welcome, My Startup Pages, Security, Users and Groups, Troubleshooting, Reporting (with a sub-item 'Common Reporting'), and Settings.

The main content area is titled 'Reports' and contains a sub-section 'Tivoli Common Reporting' with the URL <http://www.ibm.com/developerworks/spaces/tcr> and an 'About' link. Below this, there is a 'Navigation' pane with a tree view showing 'Report Sets' expanded to 'TFAM 1.1 Reports', which is further expanded to 'Tivoli Products' and then 'Tivoli Common Reporting'.

The main pane displays a table of reports with the following columns: 'Title' and 'Description'. The table contains three visible rows:

Title	Description
Exchange Server Resource Utilization	This report will show the details of Exchange Server resource Utilization in terms of Threads in Use and Storage Group Percent free space
Exchange Server Services Status Availability	This report will show the details of Exchange Server Services Status
ITM: Availability Heat Chart for Single Resource	This report helps identify patterns of resource availability over a period of time. The first column shows dates during the selected reporting period. The other columns show hours during a particular day. By hovering over a particular icon, the average system uptime during that hour can be seen. The report can also be reversed to show system downtime instead of uptime based on parameter selection.

At the bottom right of the table, it says 'Selected: 0, Total: 9'.

Event Console for Abnormal Availability and Performance Situations

Situation and Message Log Viewing

The screenshot displays the IBM Enterprise Status console interface. The main window is titled "Situation Event Console" and shows a list of 15 events. The events are categorized by severity (Warning, Critical) and status (Open, Acknowledged). A callout box highlights a "Warning" event for "NT_Percent_Disk_Time_Low" with the status "Open". Below the main table, there is a "Message Log" section showing a list of messages with columns for Status, Name, Display Item, Origin Node, Global Timestamp, Local Timestamp, Node, Type, and ID.

Situation Event Console Table:

Severity	Status	Owner	Situation Name	Display Item	Item Filter

Knowledge Base to Resolve Problem

- Structured representation of formal knowledge
 - Symptoms/Cause/Resolution
 - Grouped under well-defined classifications

Web Replay Scenario—Organization configuration...

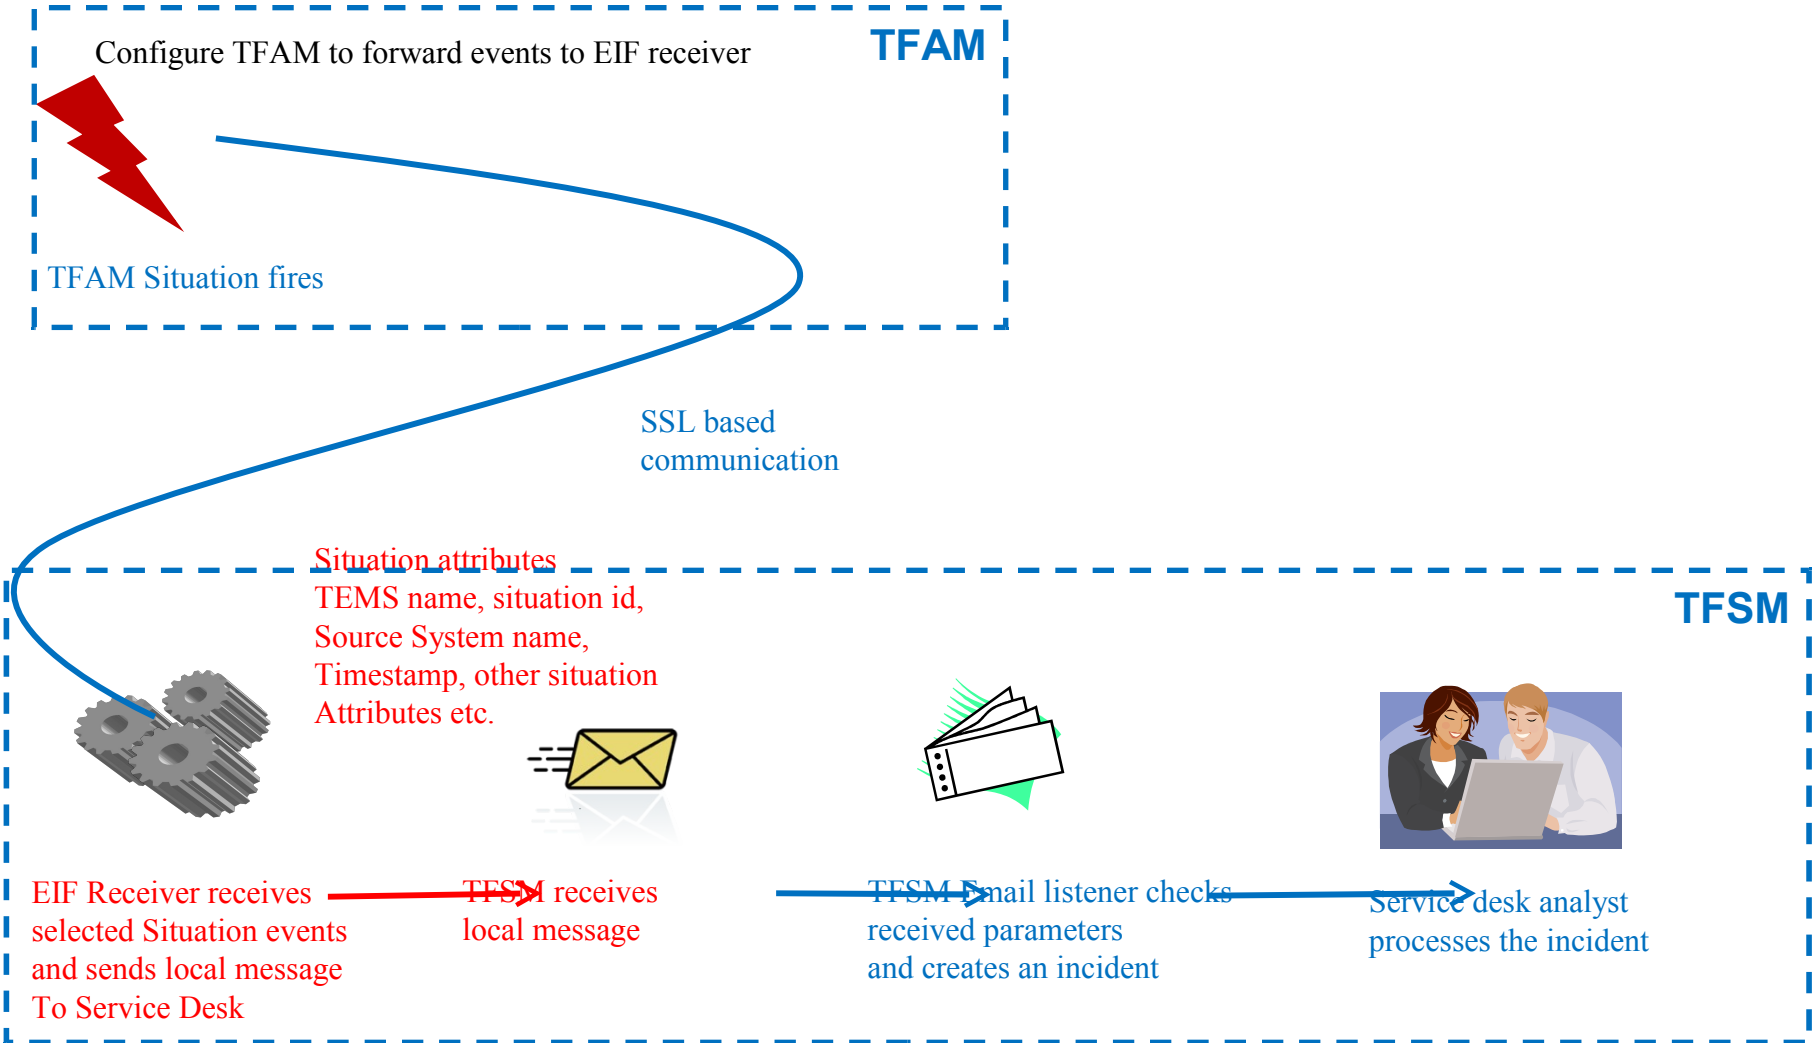

- To facilitate quick configuration
 - For example, Organization and Site configuration
- To quickly train users, agents and administrators...
 - “How do I submit a ticket”
 - “How do I search the knowledgebase”
 - “How do I create solutions”

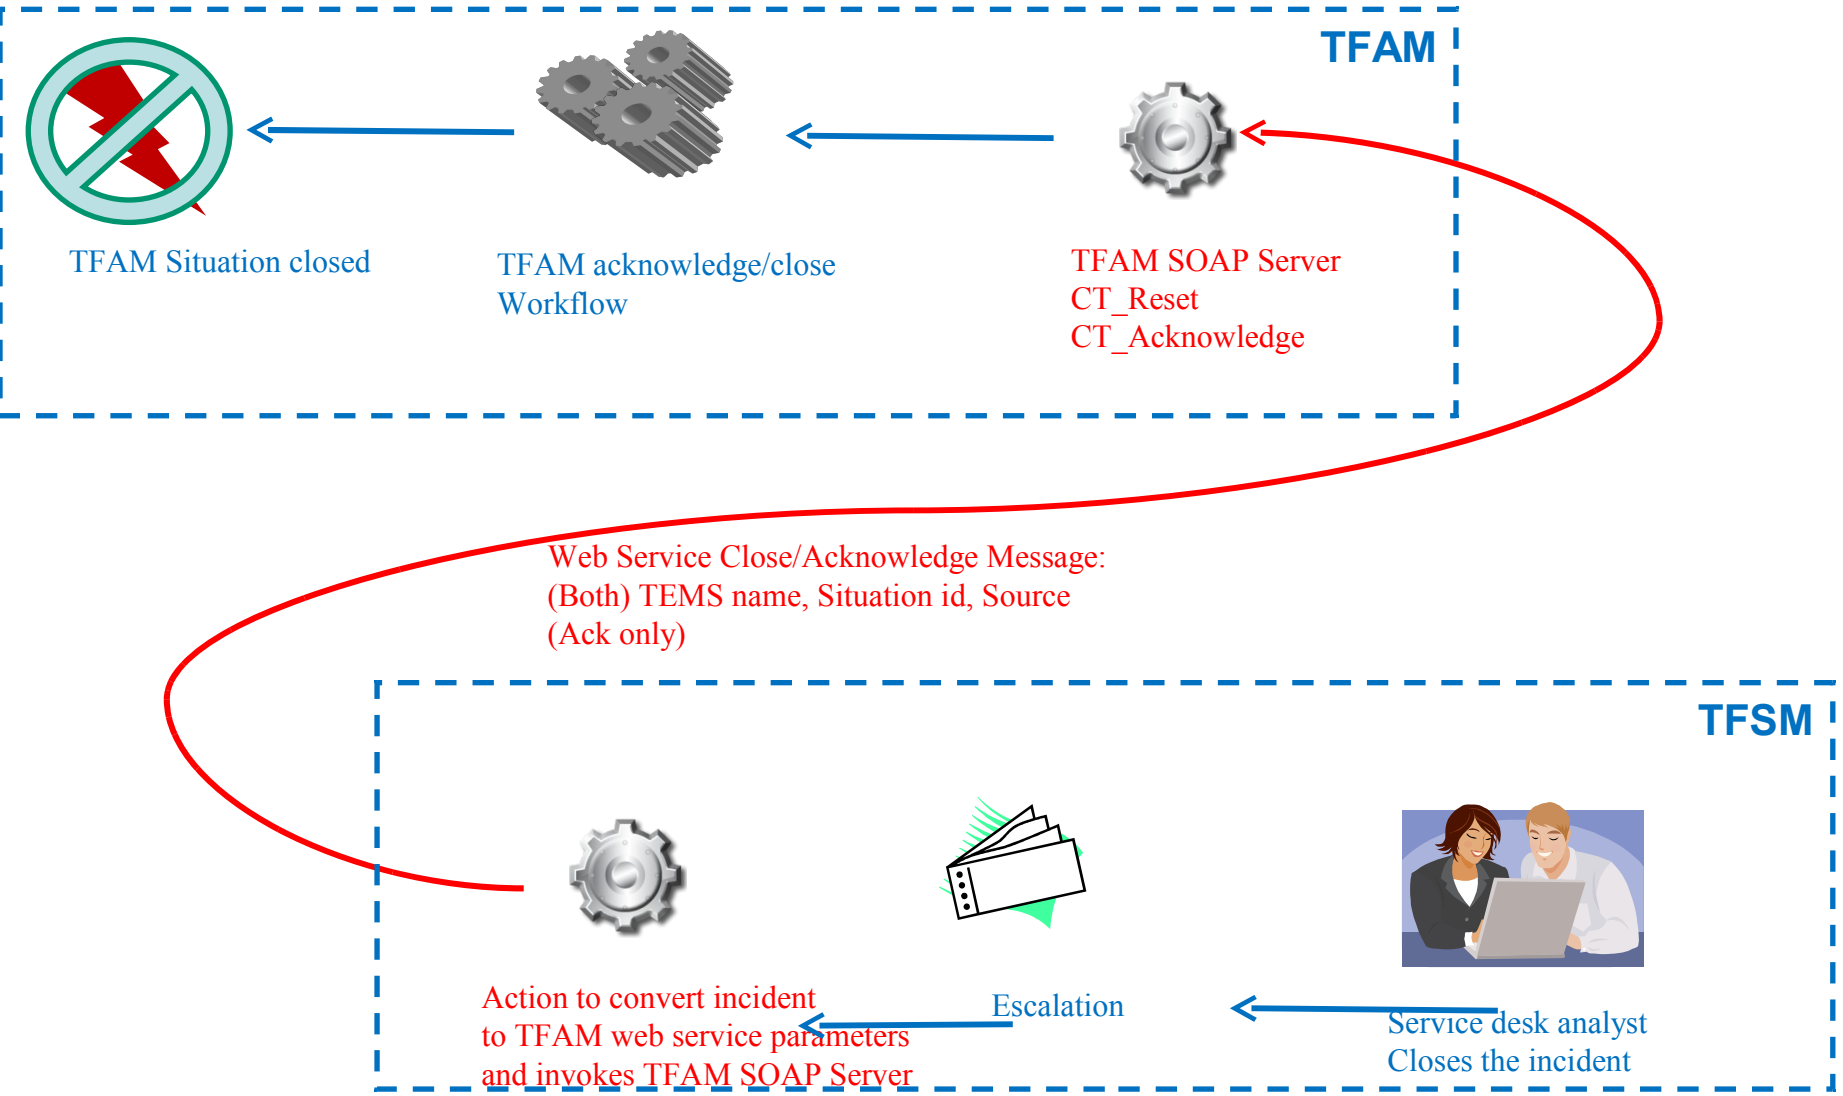

Quick time to value

- Tuning appliance for small & medium sized business (SMB) needs
 - Wizard to simplify initial configuration
 - Simplified UIs
 - New content for SMBs (Roles, Start Centers) tailored to fewer/broader roles
 - New CI applications
 - Training Aids (using Web Replay) - Tutorials
- Runs on Lotus Foundations Start designed for SMB
 - “Instant” deployment
 - Can leverage services from L Foundations Start core (e.g. SMTP, file serving, etc.)
- Import of Configuration Items/Assets:
 - Import of configuration items/assets from csv files

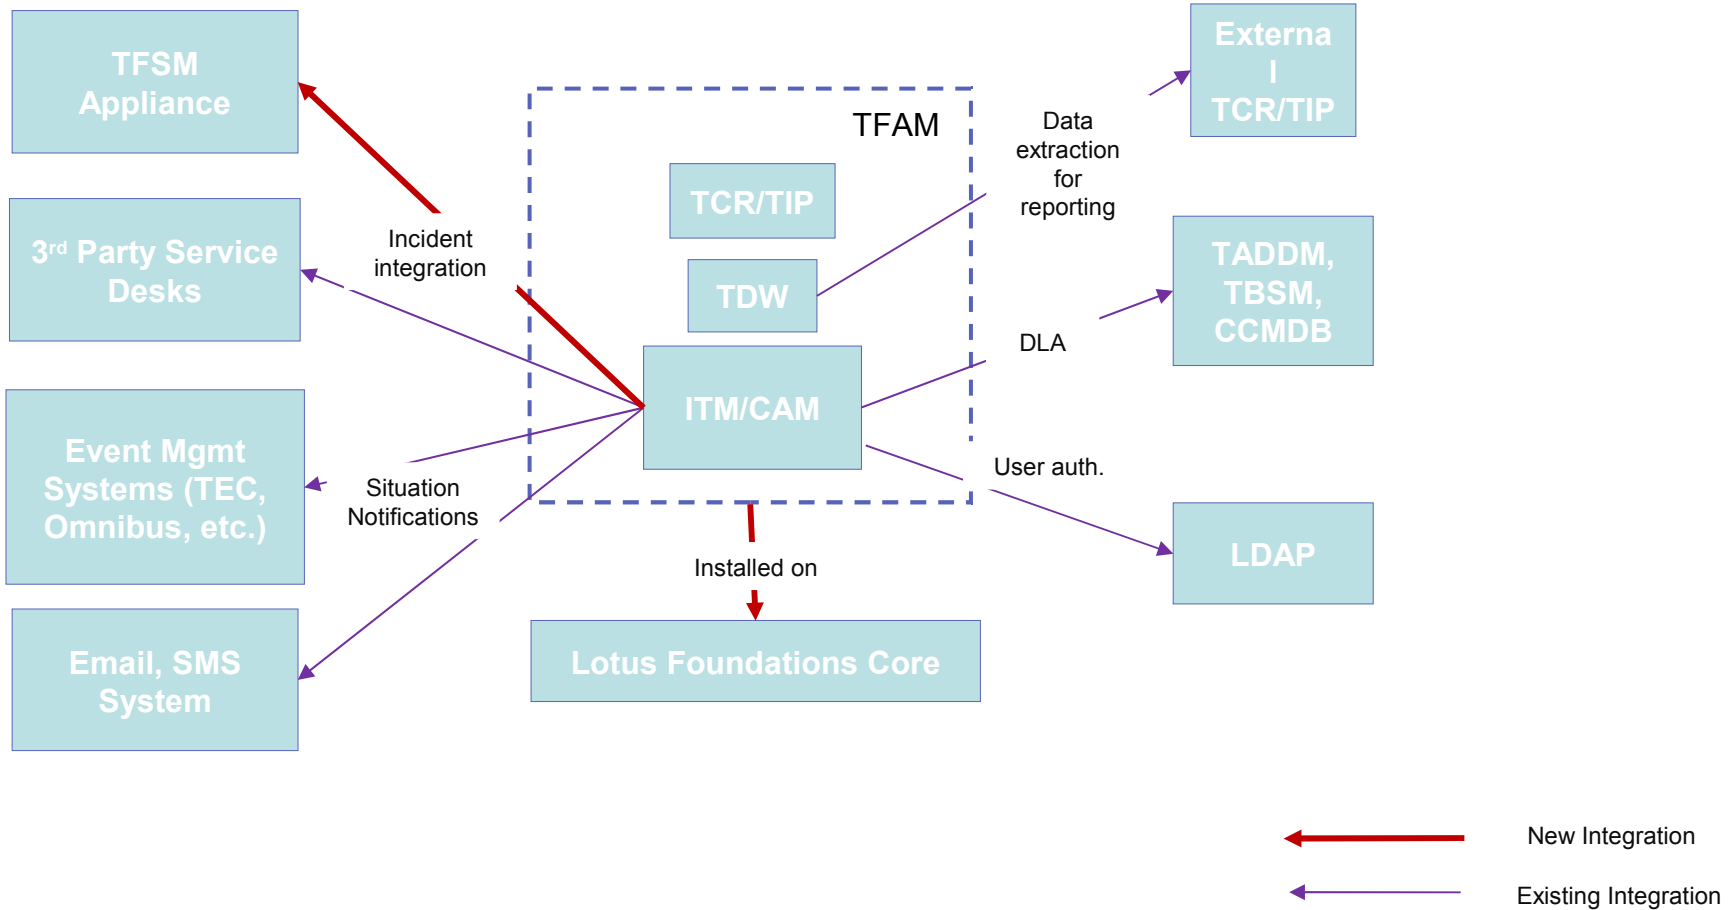

TFSM & TFAM integration
