TS Fast Track

Are you or your company new to Transformation Server (TS)? Now that TS has been purchased and installed, how do you ensure that the replication environment is optimally set up to best suit your organization's needs? How does the product work? What tasks do you need to perform when administering the product? Where will you begin in implementing the replication solution? What is involved in properly maintaining the replication environment? Does your company want to make use of the Enterprise Administrator capability to monitor your environment?

This 3-day course provides implementers and administrators of the Transformation Server product with the skills required to effectively plan, configure, manage and maintain their TS environment(s). This is a "must take" course if TS is newly acquired or implemented in your environment.
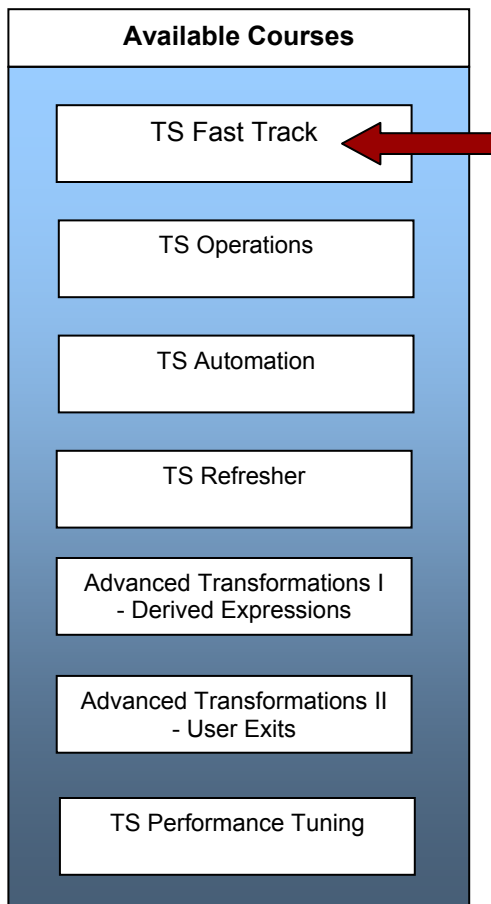

Who Should Attend?
- Database Administrators, System Administrators, Operators, Developers, Team Leaders, Project Managers and other individuals involved in implementing and administrating TS.

Pre-requisites
- An understanding of administration concepts of database(s) and platform(s) to be supported for TS.

Business Values
- Develop staff competencies and confidence to quickly implement TS in your environment.
- Efficiently manage and maintain the data replication process.
- Increase ROI through the examination of additional uses of TS in your organization.

Available Courses

- TS Fast Track
- TS Operations
- TS Automation
- TS Refresher
- Advanced Transformations I - Derived Expressions
- Advanced Transformations II - User Exits
- TS Performance Tuning

Objectives
- Understand the concepts, architecture and features of TS
- Identify and name the components of the TS replication environment(s)
- Perform basic configuration
- Understand the DOs & DON'Ts for promoting the replication environment from a test to production environment
- Monitor, manage and maintain the replication environment
- Perform basic troubleshooting
- Examine other possible implementations of TS in your organization.

Contents
- TS concepts and architectures
- Security control using the Access Manager
- Set up of replication environment using the Enterprise Administrator
- Promotion of replication environment from a test to production system
- Platform-specific product management, monitoring and maintenance
- Product functionality and business applications
- Problem solving

Training Formats
This course is taught using a combination of hands-on exercises, lectures and examples of real-world business applications using our technology.

Training Materials
Presentations, exercises, handouts and reference materials are all packaged on a training CD for participants to take back to their office.

Instructors
Our instructors have extensive knowledge of TS. They are certified professionals who implement TS solutions on a full-time basis.
