Attention

Rational ClearQuest MultiSite and SQL Server Administrators

If you plan to deploy ClearQuest MultiSite with SQL Server version 2000 or 7.0 and if your database contains more than 10 attachments then the machine on which you run `multiutil` commands must have MDAC 2.6 installed.

Symptom:
When running "mkreplica -import" the following multiutil error occurs:

> multiutil: Created the schema repository CQMS.FOO.C
> multiutil: Caught an exception. Detailed exception information is: SQLParamData: RETCODE=-1, State=37000, Native Error=170
> SQL statement="insert into attachments_blob (attachments_dbid,entity_dbid,entity_fielddef_id,data) values (?,?,?,?)"
> [Microsoft][ODBC SQL Server Driver][SQL Server]Line 1: Incorrect syntax near '?'.
> multiutil: This problem may be caused by an old version of MDAC. Please install MDAC 2.6 and try again.

Solution:
Install MDAC 2.6 on the machine that runs `multiutil` command. To install MDAC 2.6 go to the ClearQuest installation directory (default location is C:\Program Files\Rational\ClearQuest) and run `mdac_typ-2.6`.
