What's New In Rational Rapid Developer 2003

This document describes the changes made between Rational Rapid Developer build 2003.06.00.096.003 and 2003.06.00.098.003.

Correction Content

- Resolved an issue in which primary keys were not always imported when importing tables from DB2 versions 6, 7, and 8.
- Resolved an issue in which messages were not sent or received when using Switchboard Message Server with MSMQ selected as the transport.

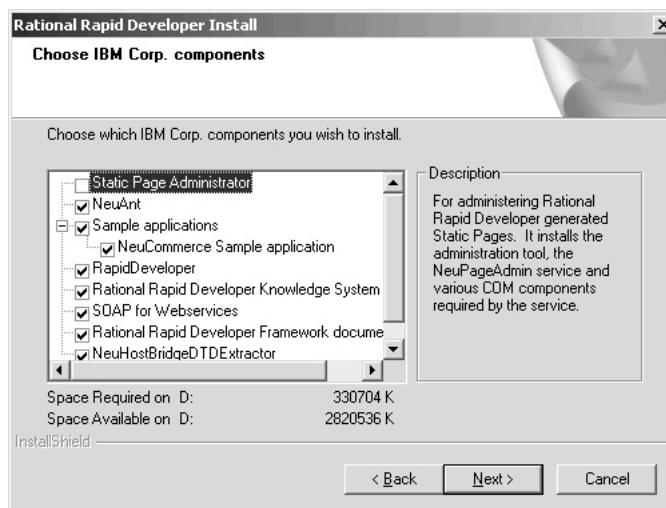

Enhancements

- No enhancements are included in this build.

Know Issues

- The Rational Rapid Developer Custom install option shows the same text for all options.

Workaround: Click on each installation option. The correct description is displayed in the Description section of the dialog box (on the right-hand side). You also can use the following screen capture as a guide.

- The Static Page Administrator, when installed using the Custom install option, does not run. This problem will be fixed in the next release.
