

IBM Rational Rose RealTime Deployment Service

Highlights

IBM Rational Deployment Services help you:

- ***Enhance efficiency and predictability of deploying a new technology***
- ***Improve communication and teamwork***
- ***Accelerate self-sufficiency***
- ***Leverage IBM Rational's industry-leading software development experience***

Recommended for:

- ***Project teams or organizations of any size that are newly adopting IBM Rational Rose RealTime.***
- ***Rational Rose RealTime users who are expanding the use of Rose RealTime within their organization.***

The IBM® Rational Rose® RealTime Deployment Service is a configurable service offering that enables you to deploy Rational Rose RealTime in the most efficient and effective manner to meet your specific needs. Your Rational account team works closely with your team to transfer Rational Rose RealTime technology and best practices to your team.

This deployment service provides the guidance and tools necessary to address your unique situation while mitigating the risks associated with introducing new technology into your organization. Rational's many years of experience in successfully introducing tools and best practices are combined into a deployment service package that will help you take full advantage of your investment in Rational Rose RealTime.

Clearly Defined Milestones and Deliverables

The Rational Rose RealTime Deployment Service follows a proven path to success and includes a comprehensive set of activities and deliverables addressing best practices, environment setup, training, deployment, and a follow-up assessment.

Environment Setup

An IBM Rational technical representative performs an evaluation to define and set up an appropriate environment configuration. This helps you avoid commonly encountered pitfalls during implementation and ensures the success of the project by starting off with an efficient environment.

End-User Training and Mentoring

On-site Rational Rose RealTime training teaches you how to effectively apply Rose RealTime and introduces your team to the functionality of the solution. Ramp-up time is reduced and all end-users start the project with the same knowledge.

On-site mentoring is then provided on desired topics such as workflow advice, architecture and packaging strategies, design idioms and patterns, state machine design, and concurrency and thread management. This mentoring provides your team with a solid foundation to work efficiently and ensures effective use of Rational Rose RealTime.

Follow-Up Assessment

Approximately 30 days after the initial deployment, your IBM Rational technical representative will return to evaluate your project's initial success by reviewing the current state of the technology and process deployment. This evaluation identifies potential problems, and provides recommendations in order to avoid unnecessary project delays.
