Even faster point-of-sale printing for demanding retail environments

## IBM 4610 SureMark™ Point-of-Sale Printer Model T15 for DBCS and SBCS Support

# SureMark

## Highlights

### Powerful Performance

The IBM 4610 SureMark Point-of-Sale (POS) Printer Model T15 with Double Byte Character Set Support can make an immediate impact on productivity for retailers in China, Hong Kong, Japan and Korea. With 50 lines per second (lps) output in DBCS mode, the SureMark Printer delivers high-quality thermal receipt printing faster than ever before. Impact slip printing handles multipart forms with ease. High-resolution fonts and characters make receipts easier to read for sales associates and shoppers alike.

### Engineered for Retail

SureMark Printer Model T15 supports DBCS and SBCS printing, and can switch between the two electronically. So, global retailers can use a single printer platform

worldwide. We also designed this printer for excellent reliability. Its durable hardware and printing mechanisms are engineered to deliver steady, problem-free operation, even in the most demanding retail environments. The SureMark Printer offers the smallest footprint in its class, so it fits wherever you need it most. The simple drop-and-load mechanism makes paper handling quick, easy and virtually error-proof.

### Investment Protection

The SureMark Printer supports RS485/RS232 connections and accepts modular interface adapters. This gives retailers the flexibility to upgrade to future I/O connectivity, such as Universal Serial Bus (USB), as it becomes available. The ability to migrate smoothly to new interface standards protects retailers' hardware investments.

### Easy to use for operators

Drop-and-load paper handling makes refills quick and easy. Changing ribbons is simple, too. Just lift off the old cartridge, snap the new one on and turn the knob to move the ribbon into place. We fit all these helpful features in a trim package with one of the most compact footprints in its class.

### Flexible options to protect your investment

The SureMark Printer works with a variety of POS hardware configurations, including many non-IBM systems. SureMark Printers support RS485/RS232 in a single, modular adapter. The ability to accept modular interface adapters gives retailers several options for future system integration. Should your hardware configuration change, the SureMark Printer is easy to upgrade. Select the interface that best supports your hardware investment today, then migrate smoothly to new technologies such as USB as they become available.

### Multiuse printer memory

The SureMark Printer offers generous flash memory for fail-safe storage of electronic journal data. Flash memory also keeps barcodes, trailers, graphics, logos and user-defined character tables stored in the printer. With this information resident, the SureMark minimises receipt printing time because less data must be transferred from the POS terminal to the printer.

## Superior speed for POS printing.

### High-powered POS performance

This quiet, high-quality thermal receipt printer sets a new standard for speed with 50 lines per second (lps) output and full Double Byte Character Set (DBCS) support for retailers in China, Hong Kong, Japan, Korea and Taiwan. For printing on standard paper or multipart forms, Model T15 also includes an impact slip printing station.

The SureMark Printer's print speed gives retailers the ability to print store logos, coupons and marketing messages on the receipt without compromising transaction time. Fast thermal printing also allows you to use applications that print receipts after the completion of the transaction. These applications can eliminate voids and group duplicated items together, producing a clean receipt that is easier for customers to scan for accuracy, and is more appealing to the eye.

IBM also improved legibility with completely redesigned fonts for the Double Byte Character Set and the Single Byte Character Set (SBCS). New character shapes are crisper and clearer, which means marketing messages printed with either set are easier to read and more memorable.

Retailers can switch between DBCS mode to SBCS mode electronically, no mechanical adjustments are required. In fact, when operating in SBCS mode, Model T15 is identical to Model T13. That means global retailers can use a single, common printer platform worldwide, and improve the efficiency of service and support.

### Retail-hardened design

Virtually every aspect of the SureMark Printer is designed to resist the dust, dirt and spills common to many POS environments. So you can be sure the rugged design will provide constant, problem-free results under harsh conditions.
