IBM Retail POS keyboards

Sales reference guide

Summary

In addition to the IBM CANPOS Keyboard, the Retail Store Solutions portfolio includes a number of POS keyboards that are ideal for narrow or wide-format models of the IBM SurePOS™ 700 and IBM SurePOS 4694 Series system units. These keyboards accommodate the unique key configurations, customizable keys and language variations used in many segments worldwide. They offer the same retail-hardened construction as our point-of-sale (POS) systems, and they are dust-proof and spill-resistant. What's more, they feature ergonomic keybutton activation, and are known worldwide for their comfortable response during operation.
