

Lotus Domino and DB2 CommonStore for Lotus Domino software solutions
To support your IT objectives

**Safely archive millions of e-mails, attachments, documents and databases
and quickly retrieve them when they're needed.**

Use your precious storage space more efficiently and help reduce costs

DB2 CommonStore for Lotus Domino at a glance...

- *Safely and cost-effectively archive millions of e-mails, attachments and documents*
- *Adhere to auditing and corporate data storage requirements*
- *Reduce time spent maintaining e-mail and IBM Lotus Notes databases*
- *Improve server performance and protect e-mail security.*

In IBM Lotus® Domino™, you have a powerful collaboration tool for enhancing the productivity of users inside and outside your organization. As use of e-mail and databases increases, you will need to ensure that your system can continue to handle the load.

With IBM DB2® CommonStore for Lotus Domino, you can safely and cost-effectively archive literally millions of e-mails, attachments and documents on a storage device — such as IBM DB2 Content Manager or IBM Tivoli® Storage Manager — and effortlessly handle your organization's increasing volume of data.

Archive e-mails, attachments, entire folders

Document-intensive organizations such as legal departments and financial services companies often are required to maintain detailed records of business transactions. Some industry regulations require archiving a copy of every e-mail. Over time, these documents can number in the millions and hinder the performance of servers and storage devices.

DB2 CommonStore for Lotus Domino offloads file attachments and IBM Lotus Notes® documents to an electronic archive, compressing data and storing them securely on hard disk, tape or optical disk. Documents can be archived not just from e-mail databases but from any Notes database on any Notes server.

Administrators can establish uniform archiving according to the needs of the business, saving important documents. Users even can archive space-consuming file attachments separately from originating e-mail messages.

Retrieve archived data via Notes or the Web

DB2 CommonStore for Lotus Domino quickly retrieves archived attachments and documents from storage media. Seamlessly integrating with Domino, it lets Notes users conveniently offload documents from Domino databases and display them directly from a DB2 Content Manager client, Web browser or retrieval back into Notes itself. Users can search electronically instead of manually, helping reduce time-wasting searches.

Real-world benefit...

Online mortgages. Insurance applications. Securities transactions. Employee resumes. Corporate-mandated archiving of these e-documents is an ideal application for DB2 CommonStore for Lotus Domino.

DB2 CommonStore for Lotus Domino also lets users access virtually all corporate data and business documents stored in DB2 Content Manager products, including images, PC files, computer-generated reports, fax messages, audio, video and content surfaced from the Web.

Reduce costs while enhancing customer service

With DB2 CommonStore for Lotus Domino, you can quickly realize multiple benefits:

- *Expand storage cost-efficiently*, storing millions of e-mails and attachments on less expensive media.
- *Improve server performance* by moving older documents to an external archive.
- *Integrate with your existing IT environment* because no new client software is required to run DB2 CommonStore for Lotus Domino.

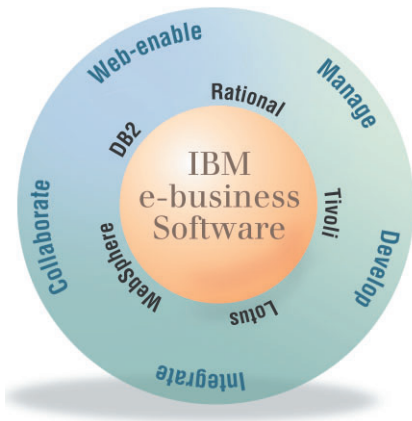

A tool for e-business on demand

As the corporate world embraces e-business on demand™, more and more e-mails, attachments, documents and entire applications are being shared among customers, suppliers and alliance partners. DB2 CommonStore for Lotus Domino supports all Domino platforms and helps make the most of your resources, providing an offline storage solution for that data...and freeing up precious server space for business-critical activities.

Real-world benefit...

You can use DB2 CommonStore for Lotus Domino to enhance your customer service, by providing fast access to archived e-mails, attachments, documents and applications required to address a customer's query.

DB2 CommonStore for Lotus Domino and e-business on demand

A successful e-business can leverage five capabilities provided by e-business software solutions from IBM which work together to facilitate e-business on demand:

DB2 information management software

Turns data into information on demand

Lotus software

Offers the instant collaboration and communication capabilities for an on demand world

Rational® software

Helps you improve software development capability with tools, services and software engineering best practices

Tivoli software

Helps you intelligently manage the complexity of an integrated, on demand operating environment

WebSphere® software

Provides a leading platform for creating and operating an on demand business.

Today's e-business needs to rapidly address emerging business requirements, changing business models and designs, and evolving relationships with customers, suppliers and partners.

In addition, with the Internet continuing to promote major revolution in business and advances in technology, companies must be mindful of emerging business trends — or risk falling behind the competition. The latest trend is e-business on demand, which integrates business processes to deliver business agility across an enterprise, as well as with customers, suppliers and key partners.

IBM offers powerful software solutions — including Express versions for small and midsized businesses — to help you optimize your current technology investment and move your company to the next phase of e-business.

The portfolio of e-business software solutions from IBM works in concert to provide a total, balanced infrastructure. That can help foster a smooth transition to e-business on demand.
