

Extending Your Mainframe For More Business Value

Add New Workload –
Data Warehouse On System z

Get More Business Results Out Of Your Data

Our branch offices have separate databases.
Each branch is analyzing customers and sales on their own.

**Service Oriented Finance
Marketing**

Looking at data in isolation can miss larger trends and opportunities

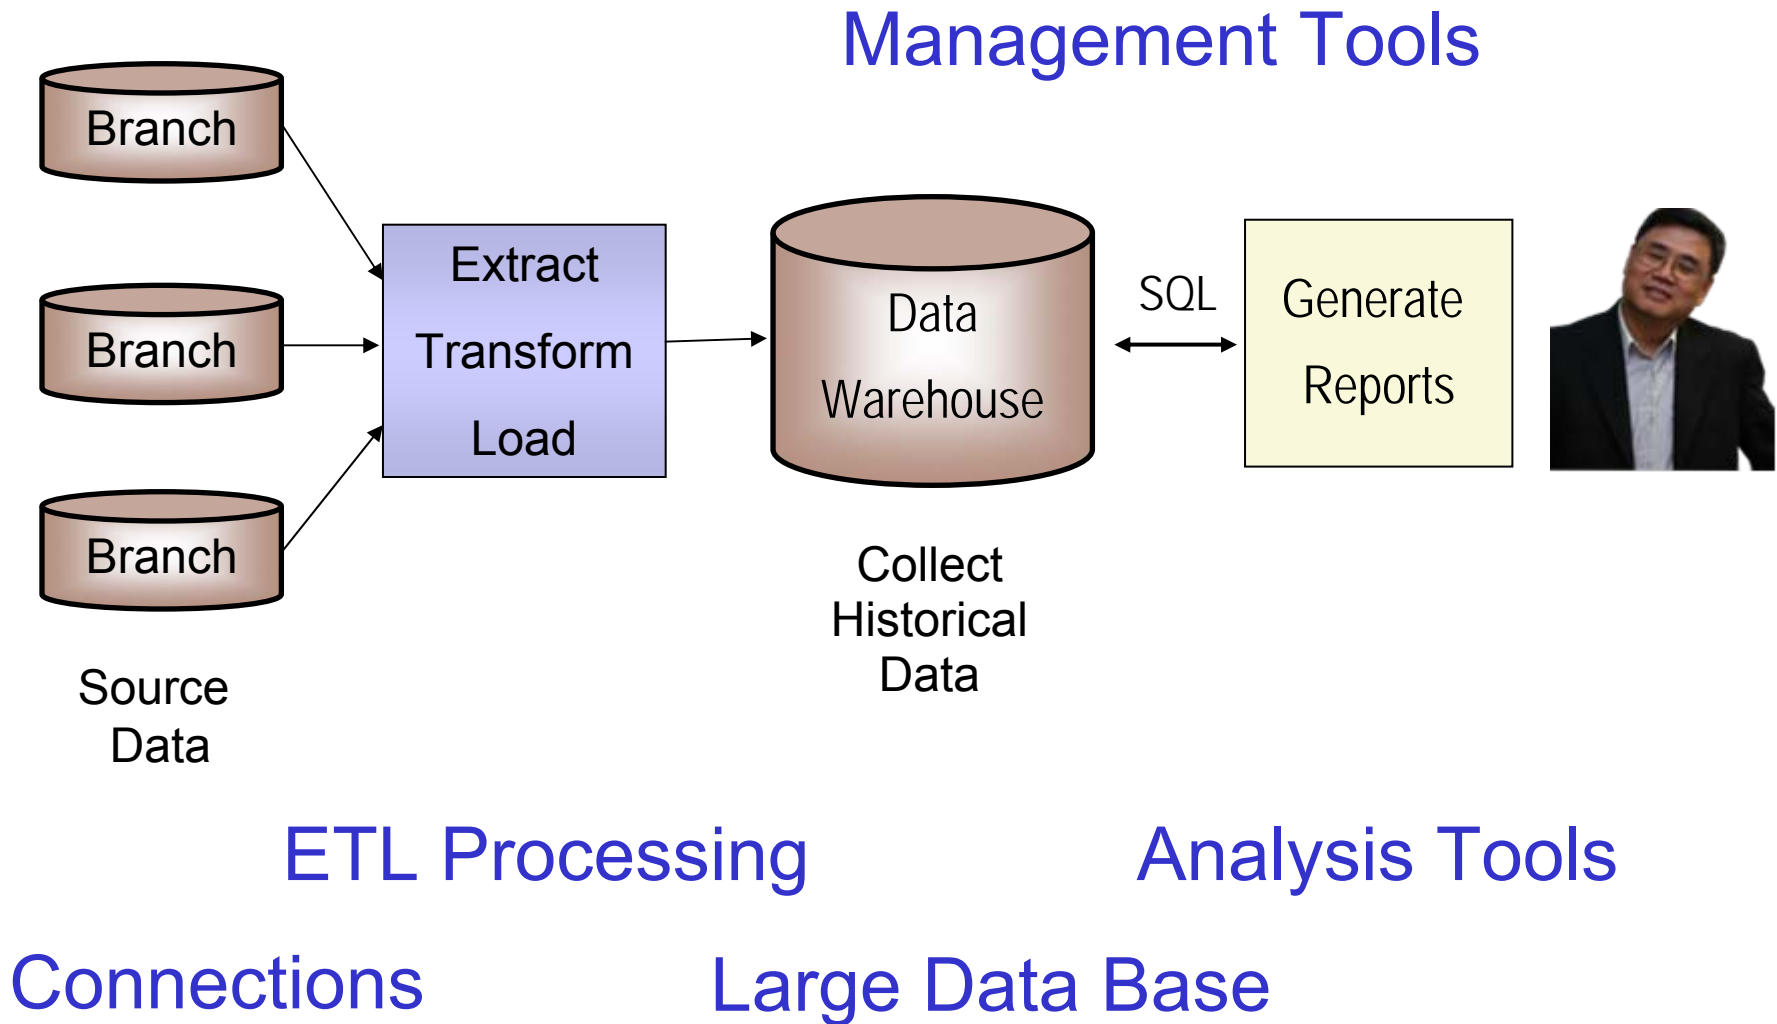

IBM

Service Oriented Finance Needs A Data Warehouse To Make Optimal Business Decisions

- Each branch is responsible for its own marketing campaign
- Corporate marketing gets reports from each of the branches based on local results
- Corporate marketing needs to spot trends to know what campaigns are most effective region-wide
- A corporate data warehouse would give marketing the data to easily do comparisons between the branches and promote best practices

Deliver Business Insight With A Data Warehouse

DB2 z/OS Provides The Most Scaleable Foundation For Data Waehouses

- “The highest performing transaction processing system in the 2005 program, a [DB2] z/OS implementation, executed **over one billion** SQL statements in an hour. The average for operational systems was 35 million SQL statements or database operations per hour”
 - The study lists the largest known peak workload on **Oracle RAC** to be **8.6 million** SQL statements per hour
-
- “The largest transaction processing [database] in the program, **23 TB**, was hosted on [DB2] z/OS, as in the last program”
 - The study lists the largest transaction processing database on **Oracle RAC** to be **9.6 TB**

Leading OLTP System,
DB2 for z/OS, Processed
Over One *Billion* SQL
Statements per Hour

DataStage Utilizes Parallel Processing Services For Extreme Scalability

- Provides automatic dynamic data partitioning, repartitioning, and pipelining for optimal parallel performance
- Design integration processes without concern about underlying hardware architecture or number of processors
 - ▶ Resources defined in a separate configuration file
 - ▶ Allows easy expansion to new hardware
- Benefits from processing capacity, I/O capacity, and Hipersockets on System z

IBM InfoSphere Information Server Exposes Data And Jobs As SOA Services

IBM Beats The Competition In Data Warehouse Solutions

IBM

- Integrated data services platform
- Extensive connectivity
- Enterprise scalability
- Easily expose jobs as services

Oracle

- Two separate un-integrated products
- Warehouse Builder can only load Oracle databases
- Oracle Data Integrator (used to be Sunopsis) has no data quality capabilities
- Coding required to expose jobs as services

Microsoft

- Limited connectivity and limited support for non-Microsoft
- Lacks enterprise scalability
- Data quality limited to "Fuzzy Search" and MS SQL only
- Coding required to expose jobs as services

Service Oriented Finance Wants A Dynamic Data Warehouse

Our data is updated frequently,

We need the data in our data warehouse to be more current

Change Data Capture together with Information Server can “trickle feed” data into your data warehouse as it changes

IBM

Change Data Capture For System z

- Event is triggered automatically by a change in the data
 - ▶ Monitors DB2 log file for data changes
 - ▶ Sends message with data changes
- Message can initiate a business process
 - ▶ Example: After \$10,000 in sales, a service request is sent to IBM InfoSphere Information Server, invoking a DataStage job to load sales data for analysis
- Automates the process of loading the data warehouse
 - ▶ Improves the currency of data in the data warehouse

Business Optimization

We'd like to make it easy for managers to closely monitor how our bank branches are performing

**Service Oriented Finance
CIO**

This is an example of Performance Management and you can do this with IBM Cognos BI

IBM

Achieve Business Optimization Using Performance Management

- Make effective use of information to improve decision making
- Enhance processes to improve business results
 - ▶ Define strategic goals, then measure and manage performance to ensure the goals are achieved
 - ▶ Link employee objectives with organizational objectives
- Examples of Performance Management
 - ▶ Monitoring and managing key performance indicators
 - ▶ Reporting and analyzing strategic information

IBM Cognos Provides an Integrated Platform for Performance Management

Measure and monitor the business using **scorecards** and **dashboards**

Uncover trends and investigate root cause using **analysis tools** and **reports**

Take action by collaborating and planning with Financial Performance Management tools

Server-based business intelligence - only requires a **browser**

Use IBM Cognos BI Scorecards And Dashboards To Answer The Question “How Are We Doing?”

■ Scorecards track progress towards objectives

- ▶ Metrics display results relative to targets
 - Defined on any indicator of business performance
 - Actual results imported on a scheduled basis
- ▶ Scorecards organize metrics logically
- ▶ Diagrams organize metrics visually
- ▶ Take action using action items, projects, comments, and watch lists

	Name	Actual	Target
● ▲	NY Metro Profitability Index	65.82	62.81
● ▼	NY Metro Composite Index	5.10	4.92
● ▼	NY Metro Customer Retention/Attrition	2,085.87%	2,077.21%
◆ ▼	NY Metro Realtime Customer Feedback	198.00	200.00
■ ▲	NY Metro Revenue	US\$8.97M	US\$9.50M
■ ▲	NY Metro % Revenue Growth	39.56%	44.00%

■ Dashboards give quick access to information

- ▶ Present at-a-glance, high impact views of relevant scorecards and information
- ▶ Use visual indicators such as gauges and dials
 - Drill-down into details
- ▶ No additional licensing requirements to create dashboards with Cognos 8 BI

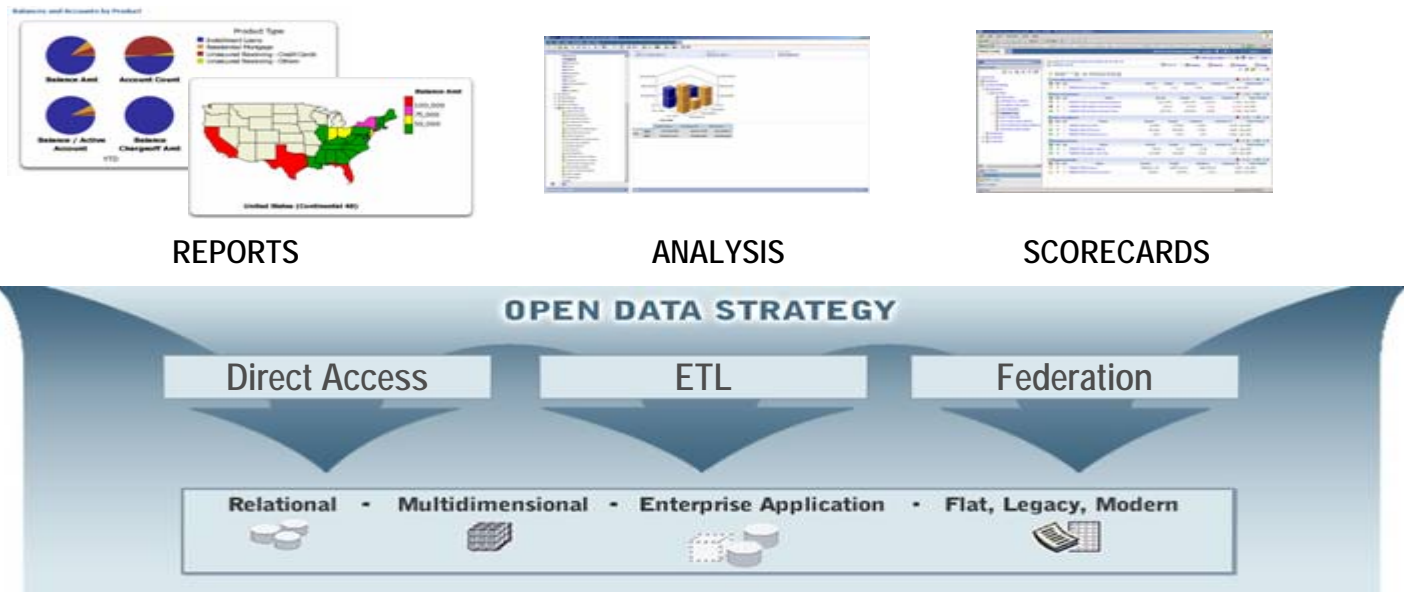

Use IBM Cognos BI Analysis And Reporting To Answer The Question “Why Is This Happening”?

- **Use Online Analytical Processing (OLAP) analysis to gain insight**
 - ▶ **Cognos Analysis Studio** provides simple and accessible multidimensional analysis
 - ▶ Powerful comparative analysis features such as automatic time trending and mixed-grain detail
 - ▶ Works with many OLAP and “dimensional relational” data sources
- **Create, distribute, and manage any style of report**
 - ▶ **Cognos Query Studio** provides “self service” reports created as needed by novice users
 - ▶ **Cognos Report Studio** provides “pixel perfect” production reports for payroll, invoices, financials
 - ▶ Supports many report formats including HTML, PDF, Excel, CSV, XML
 - ▶ Creates reports from both relational and OLAP data
 - ▶ Supports Unicode for working with reports in multiple languages
- **Easily manage the full reporting lifecycle**
 - ▶ Schedule analysis and reports and “burst” to many users
 - ▶ Users configure alerts and watch rules to automatically receive updated content via E-Mail or portal “News Items”

IBM Cognos Allows An Open Data Strategy

- All Cognos tools access a consistent set of information defined in the Cognos metadata model
 - ▶ Enables sharing of data assets between Cognos tools
 - ▶ As backend data sources change, the Cognos metadata model can be updated and can identify impacts to deployed reports
- Open Data Access allows *any combination* of data sourcing strategies (e.g. combining ETL with Federation)

ERICO International

International Manufacturer Builds Enterprise Data Warehouse With IBM

Challenge

- Information systems weren't keeping pace with growing volume of information generated throughout company.
- Isolated databases did not provide the global views needed to analyze market position and make critical business decisions.
- Launched corporate initiative to build **global data warehouse** to centralize information and better analyze data.

Solution

- Selected **InfoSphere Information Server** to access, understand and cleanse data from its worldwide operations.
- Information is delivered into an enterprise data warehouse leveraged by **Cognos** business intelligence and performance management software for reporting.
- Replaced Microsoft SQL Server with **DB2 Data Warehouse Edition**.

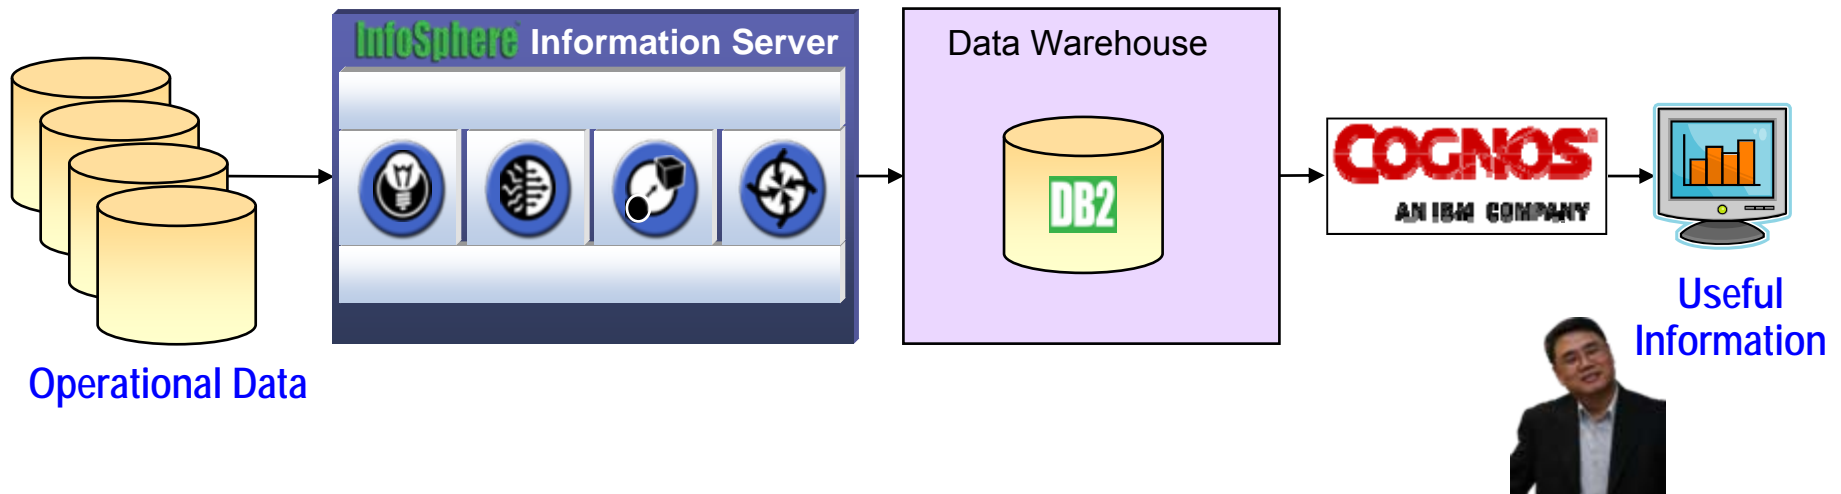

Business Benefits

- **Deliver updated information** to different processes and systems that can use it to **improve sales, marketing and product development**.
- **Simplify** company's e-commerce and electronic publishing initiatives by **reconciling, cleansing and updating** product information, part numbers, pricing data, renderings and drawings.

IBM Delivers The Best Support For Business Optimization

- Highly scalable enterprise data warehousing platform
- Consolidated information integration platform
- Cognos reports and analysis
- Extensive connectivity
- Enterprise scalability
- Unified metadata management
- Supports many hardware platforms and operating systems, including System z

Data Warehouse Capabilities On System z

- Large Capacity Data Base
 - ▶ **DB2 for z/OS Value Unit Edition**
 - ▶ Parallel queries, Materialized Query Table, Star Join Enhancements
- Connect, Extract, Transform and Load
 - ▶ **IBM® InfoSphere™ Information Server For System z**
 - ▶ Runs on zLinux (DataStage also runs on z/OS)
- Analysis Tools
 - ▶ **Cognos**
 - Solution for reporting, analysis dashboards and scorecards
 - Other tools (QMF, Alphablox, Data Quant, Hyperion, Business Objects, SAS, IBI)
 - ▶ **InfoSphere Master Data Management Server for Linux on System z**
 - More effectively manage high-value operational data
- Performance Monitoring
 - ▶ **IBM Tivoli Omegamon XE for DB2 Performance Expert on z/OS**
- Security and Compliance
 - ▶ **DB2 Data Archive Expert, DB2 Test Database Generator, DB2 Audit Manager Expert, IBM Encryption for DB2 and IMS Databases**
- Dedicated Query Hardware
 - ▶ zIIPs for parallel queries & remote access
 - ▶ Superior I/O bandwidth, multiple I/O paths

Where Should We Deploy This Solution?

Capability is important, but cost is a big concern for us

CIO

Deploying this solution on your System z will cost less than Oracle on distributed

IBM

Case Study: Deploy New 10TB Data Warehouse On z/OS With Disaster Recovery (Cognos Base Function)

Existing Mainframe

Existing z10:
2 GP 1,720 MIPS
DB2 and utilities
With 20Tb storage

Existing Disaster Recovery Site

Existing:
1 GP processor for hot
disaster switch-over
1 "dark" DR processor
With 20Tb storage

Add 1 LPAR for New Data Warehouse w 3.8 TB Storage

2,184 MIPS
additional
workload on z/OS
and 1840 MIPS on
zLinux

Incremental:

2 GP 1,310 MIPS (60%) DB2 & Utilities
1 zIIP 874 MIPS (40%) DB2
1 IFL 920 MIPS DataStage
1 IFL 920 MIPS Cognos
Add 10 GB memory

And add Disaster Recovery w 3.8 TB Storage

3 year
cost of
acquisition
\$5.71M

Capacity Backup:
2 GP
1 zIIP
2 IFLs

Or add HP Integrity Superdome sx2k 9150N Server w 7.3 TB storage

Prod

48 Chip
96 Core

350,299*
Performance Units

And add Disaster Recovery W 7.3 TB storage

Prod

48 Chip
96 Core

350,299*
Performance Units

3 year
cost of
acquisition
\$24.98M

*Production Performance Units required = (2,184+1840) MIPS x 87 = 350,088

Storage Costs: DB2 Provides More Storage Savings Than Oracle

- DB2 for z/OS lowers TCO by reducing storage needed
 - ▶ TPC-H Benchmark: DB2 compression of 62% vs 27% for Oracle RAC
- Storage savings with DB2 vs. Oracle for a 10 TB data base

	Oracle	DB2 for z/OS*
Storage System	HP XP24000 Storage	IBM System Storage DS8100
Overall database compression ratio (using TPC-H benchmark results)	27%	62%
For 10 TB uncompressed data storage needed	7.3 TB of HP Storage	3.8 TB of IBM Storage
Cost of storage (3 year TCA)	$\$888,399 + \$37,560 \times 3$ = \$1,001,079	$\$192,205 + \$7,992 \times 2^{**}$ = \$208,189
With compression, storage for DB2 costs <u>79% less</u> than for Oracle		

*DB2 for z/OS achieves similar compression ratios to those of DB2 for LUW

**IBM storage maintenance fee for the first year is included in the warranty

Case Study: Deploy New 10TB Data Warehouse on z/OS With Disaster Recovery (Cognos Full Function)

Existing Mainframe

Existing z10:
2 GP 1,720 MIPS
DB2 and utilities
With 20TB storage

Existing Disaster Recovery Site

Existing:

US Retailer Improves Response Time By Co-locating Data Warehouse And Operational Data

- A major US retailer moved their 5.5TB data warehouse from distributed servers to System z
 - ▶ Operational data bases were already located on System z
- On average they reduced query processing times by 80% due to better query parallelism in DB2 for z/OS
 - ▶ (17 minutes to 3 minutes)
- They saved CPU cycles to load the data warehouse
 - ▶ Avoided network processing

Deliver Business Insight With A Data Warehouse

We learned the best promotion to maximize our business profits

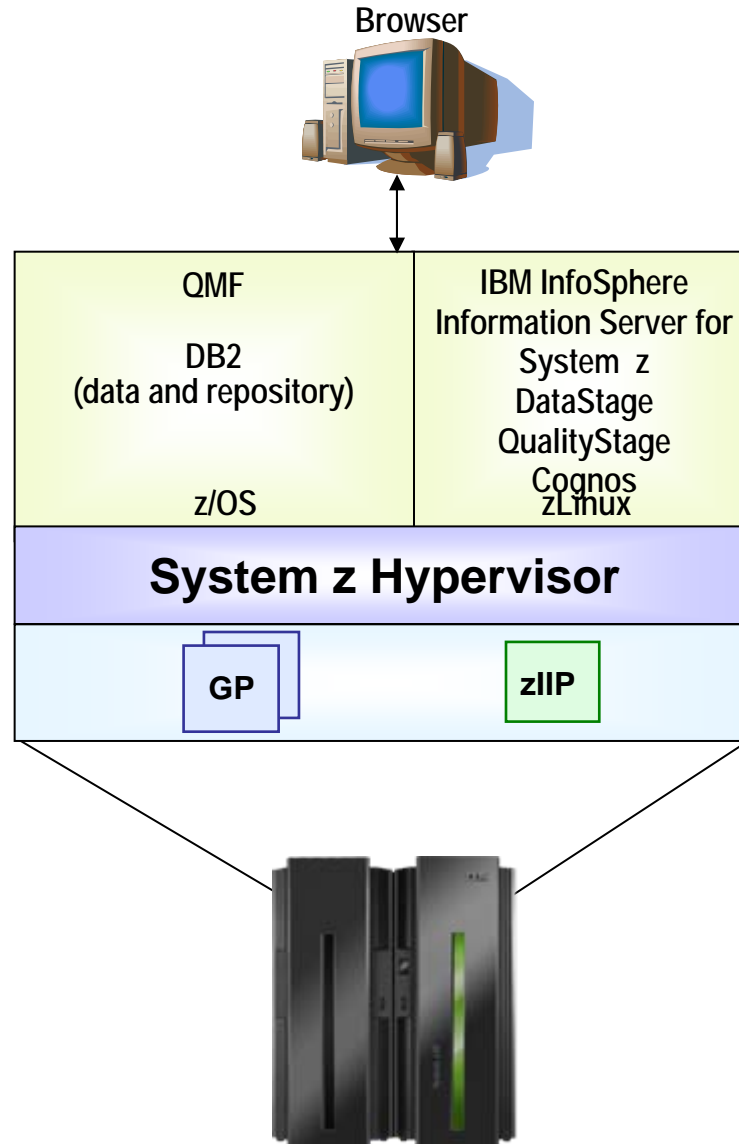

Marketing VP

And I saved money by deploying our data warehouse solutions on System z

CIO

Best

- ▶ Quality of service
- ▶ Co-location
- ▶ Lower cost of acquisition

IBM

Accelerate Development With Pre-built Data Models For Industry Data Warehouses

- Quick start your data warehouse design with pre-built **IBM Industry Data Models**
- Use **Enterprise Model Extender** to customize the data model
 - ▶ Eclipse plug-in for Rational Data Architect
- Models capture the best practices of over 400 IBM customers
 - ▶ Banking, finance, health, insurance, retail and telco
