## Inexperienced Programmers Can Be Productive

- An independent study from Branham Group concluded:
  - ▶ Using RD/z, a developer with no mainframe experience can be **just as productive** as an experienced ISPF programmer
  - ▶ In addition, the RD/z developer achieved
    - 44% productivity advantage in COBOL and PL/1 edit, compile, debug activities
    - 3 times productivity advantage in creating web services
- Workstation based edit and unit test saves mainframe cycles
  - ▶ Customers at Fiducia, Deutsche, Nationwide observed an 80% reduction in the cost of compiles

## Customer Example COMMERZBANK

### Background:

- ▶ German bank providing financial services to private companies across Europe
- ▶ Provider of online banking services

### Challenge:

- ▶ Upgrade teller workstations and ensure they continue to work with an existing third-party COBOL run-time environment

### Solution:

- ▶ New application framework based on **IBM COBOL**
- ▶ **WDz** to design new COBOL and other code

*"In one tool, we have a single development environment for multiple environments. I don't have to jump between different tools to do different tasks. The tool is very complete."*

## Another Tool to Help Inexperienced Programmers

- **WebSphere Studio Asset Analyzer (WSAA)**
- Powerful tool for Discovery and Impact Analysis
  - ▶ Search for application assets
  - ▶ Understand asset structure and relations
    - find dependencies across applications and lines of business
  - ▶ Perform data flow and impact analysis
  - ▶ Extract code for re-use
- Supports both mainframe and distributed assets
- Results are displayed in easy-to-read graphical windows
  - ▶ Uses a Web Interface

11

## WSAA Can Discover and Take Inventory of a Wide Variety of Mainframe Assets

- Source code: COBOL (including copybooks), PL/I, assembler, and JCL
  - ▶ Source code can be in a partitioned data set (PDS or PDSE) or controlled by a source control management (SCM) product.
- CICS online regions and transactions
- IMS subsystems and transactions
- SQL statements (DCLCURSOR, DCLTABLE, DELETE, FETCH, INSERT, SELECT, UPDATE)
- DB2 catalogs (columns, stored procedures, systems, tables, and views)
- MQ calls and queues
- J2EE assets
