========================================================================
```

```
========================================================================
```
1. Introduction
```
========================================================================
```

 This readme document provides information about fix pack 6.2.7 for
IBM(R) Maximo(R) Asset Management 6.2, 6.2.1, 6.2.2, 6.2.3, 6.2.4,
6.2.5, and 6.2.6.

 This readme document describes the contents of this fix pack and
provides the installation instructions. It also lists the fixed issues
in this release and the previous releases.

 The following products, which are based on Maximo Asset Management,
work with this fix pack:

 - IBM Tivoli Asset Management for IT 6.2, 6.2.1, 6.2.2, 6.2.3, 6.2.4,
   6.2.5, and 6.2.6.

 - IBM Tivoli Service Request Manager 6.2, 6.2.1, 6.2.2, 6.2.3, 6.2.4,
   6.2.5, and 6.2.6.

Dependencies

 There are no dependencies.

Prerequisites

 - Maximo Asset Management must be at 6.2, 6.2.1, 6.2.2, 6.2.3, 6.2.4,
   6.2.5, or 6.2.6.

 - Have administration rights and privileges.

 - Back up your database.

Upgrade from version 6 to version 7

- If you install this fix pack, you cannot upgrade Maximo Asset
     Management version 6 to version 7 until Maximo base services
     7.1.1.8 is available.

Conflicts with previous hot fixes

 If you received and installed any hot fixes of Maximo Asset Management
6.2.7 on or after August 24, 2010, do not install fix pack 6.2.7.
Installing this update to any system that has hot fixes applied on or
after August 24, 2010 might place your system at risk.

 If you applied hot fixes on or after August 24, 2010, you might be
advised by IBM Software Support to wait for a subsequent hot fix or
fix pack of Maximo Asset Management.

 For information about outstanding hot fixes that are not included in
release 6.2.7, see the "Outstanding issues corrected in hot fixes"
section.

New folder installed

 When you apply this fix pack, the TIVREADY folder is installed on your
computer. The folder is in the maximo_root\applications\maximo\TIVREADY
directory.

     NOTE   Do not delete or modify the TIVREADY folder.

==
2. Files
==

The following file is included:

 - max627up.exe
   The abone file contains Maximo Asset Management fix pack 6.2.7.

 For additional fix pack information and download files, see the
download page of Maximo Asset Management fix pack 6.2.7 at
www.ibm.com/support.

==
3. New supported components
==

 - Translations.

 - IBM WebSphere® Application Server versions 6.0.2.39 and WebSphere
     6.1.0.29.

 - IBM DB2 9.7 FP1.

Support restrictions

- Maximo 6.2.7 does not support Oracle 11g due to conflicts and
    incompatibility with the JDK versions employed with Maximo 6.2 and
    Oracle 11g.

  - See the url below for the latest information on supported software
    versions, including third party suppliers.

http://www-01.ibm.com/support/docview.wss?
rs=3214&context=SSLKT6&q1=language&uid=swg27014419&loc=en_US&cs=utf-8&lang=en

==
4. Preparing to install the fix pack
==

 1) To determine the current software version of Maximo Asset Management
    and the add-on components, run the version.bat file from the
    maximo_root/applications/maximo folder.

    If the system displays the following result, the software is current
    and you do not need to install fix pack 6.2.7:

    Maximo Application Server 6.2.7 Build 20100824-1415 DB Build V600-768

 2) If the two following conditions are met, you must update the storage
    partition fields for the Maximo Asset Management database:

    - You installed Maximo Asset Management and ran the maxinst.bat file
      to create your database objects, but you did not include the "-s "
      and "-t" flags to set the tablespace for index storage and table
      storage.

    - You are running a Microsoft SQL Server database or any database
      that is not using 'MAXIMO' as a tablespace.

    To update the partition fields, you must set the storage partitions
    according to your database:

    - If you are using SQL Server database, set the storage partitions
      to PRIMARY by running the following statements:

      update maxtable set storagepartition='PRIMARY';
      update maxtablecfg set storagepartition='PRIMARY';
      update maxsysindexes set storagepartition='PRIMARY';

    - If you are using Oracle or DB2 database, set the storage partitions
      to the correct native tablespace name by running the following
      statements:

      update maxtable set storagepartition='tablespace name';
      update maxtablecfg set storagepartition='tablespace name';
      update maxsysindexes set storagepartition='tablespace name';

      NOTE   The tablespace name variable is the name of the tablespace
              that contains the tables and indexes.

 3) If you use Maximo Enterprise Adapter:

    a. Process any transactions that are in the inbound and outbound
       queues.
       For more information, see "Processing transactions in WebSphere

Application Server queues" and "Processing transactions in
WebLogic Server queues."

b. If you use interface tables, process any transactions that are in
the inbound and outbound queue tables.
For more information, see "Processing transactions in the inbound
and outbound queue tables."

4) Stop the application servers and services of Maximo Asset Management.

5) If you use Actuate Reporting, stop the Actuate servers and services.

6) Back up the entire maximo_root folder.

7) If you use Actuate Reporting, back up the actuatei18ntext.properties
file, found in the
maximo_root\applications\activeportal\WEBINF\classes\com\actuate\ExternalText
folder;

8) Back up the Maximo Asset Management database.

9) Back up the interface tables and objects of Maximo Asset Management.

10) Create a test database from a copy of your production system.

If you use Oracle database, you must import the Maximo schema by
using the same tablespace name as your production tablespace name.

If possible, create your test database in its own instance of Oracle.
By doing so, you can start, stop, or shut down the database without
interfering with other databases.

For more information about how to create an instance and a test copy of
your database, see your Oracle documentation.

Processing transactions in WebSphere Application Server queues
----

If you use Maximo Enterprise Adapter on WebSphere Application Server,
process the transactions that are in the inbound and outbound queues on
your application server.

You must ensure that no messages remain in the following queue
destinations:
  - cqinbd
  - sqinbd
  - sqoutbd

Procedure:

1) Sign in to the WebSphere Application Server console.

For example, http://localhost:9060/ibm/console.

2) In the left pane of the window, navigate to
Service Integration > Buses > meajmsbus > Destinations.

3) Click queue destination cqinbd.

4) On the Configuration tab, select Queue Points under Message Points.

5) Select the identifier for the queue and click the Runtime tab.

     NOTE   The Current Message Depth field on the Runtime tab
                 shows the number of messages in the queue.

6) If the number of messages in the queue is zero, go to step 11.

7) To see the messages with their Transaction IDs, click the Messages
   link under Additional Properties.

8) Click Refresh until the queue is empty.

9) If some messages remain in the queue, check the error folder.

     NOTE   The error folder is in the global directory location
                 that you defined in the Integration Administration Setup
                 window of the External Systems application of
                 Maximo Asset Management.

     NOTE   If you did not define the global directory location,
                 the default location of the error folder is
                 drive_root:\IBM\WebSphere\AppServer\profiles\Custom01.

10) If error messages exist, correct the corresponding transactions and
    place them in the retry folder.

11) Repeat the preceding steps for the sqinbd and sqoutbd queues.

12) After the messages process, disable the external system by clearing
    the Enabled check box in the External System application of
    Maximo Asset Management.

Processing transactions in WebLogic Server queues

 If you use Maximo Enterprise Adapter on WebLogic Server, process the
transactions that are in the inbound and outbound queues on your
application server. You must ensure that no messages remain in the
following queue servers:

    - mxintcqinserver
    - mxintsqinserver
    - mxintsqoutserver

 Procedure:

1) Sign in to the WebLogic Server Administration Console.

   For example, http://maximo-host-server:instance-port-number/console.

2) On the WebLogic Server home page, navigate to
   mydomain > Services > JMS > Servers > mxintcqinserver.

3) On the Monitoring tab of the mxintcqinserver page,
   click the Monitor Active JMS Servers link.

   On the Active JMS Servers page, the Messages column for the
   mxintcqinserver queue server shows the number of unprocessed
   messages in that queue.

4) Wait until the queue contains zero messages. If some messages remain
   in the queue, check the error folder.

      NOTE   This error folder is in the global directory location
   that you defined in the Integration Administration Setup
   window of the External Systems application of
   Maximo Asset Management.

      NOTE   If you did not define the global directory location,
   the default location of the error folder is
   drive_root:\bea\user_projects\domains\mydomain.

5) If error messages exist, correct the corresponding transactions and
   place them in the retry folder.

6) Repeat the preceding steps for the mxintsqinserver and
   mxintsqoutserver queue servers.

7) After the messages process, disable the external system by clearing
   the Enabled check box in the External System application of
   Maximo Asset Management.

Processing transactions in the inbound and outbound queue tables
----

 If you use interface tables in Maximo Enterprise Adapter, you must
process the transactions that are in the inbound and outbound queue
tables.

 Procedure:

1) Check for unprocessed transactions in the inbound queue table:

   a. Enter the following SQL statement:

      select * from MXIN_INTER_TRANS;

   b. If the SQL statement does not return any records, no unprocessed
      transactions exist.

      If the SQL statement returns any records, wait for the Maximo
      server to process the transactions.

2) Check for unprocessed transactions in the outbound queue table:

   a. Enter the following SQL statement:

      select distinct iface_name from MXOUT_INTER_TRANS;

   b. If the SQL statement returns records, determine the interface
      table that corresponds to each interface (iface_name) returned
      by the SQL statement.

   c. For each interface table that corresponds to an interface name
      returned by the SQL statement in step 2a, enter the following
      SQL statement:

      select * from interfacetablename where ifacestatus <> 'DONE';

```
        NOTE    This statement returns any unprocessed transactions.

    d. Correct the unprocessed transactions.

 3) Back up the interface tables to retain them for historical purposes.

        NOTE    Depending on the current fix pack level, the patch
                process might drop the interface tables.

============================================================================
5. Installing the fix pack
============================================================================

 Effective with this fix pack, the execution of the installation process
is no longer accomplished through the PowerUpdate methodology. Download
the fix pack through the Fix Central link provided in the 6.2.7
Fix Pack download document.

 1) Download the IBM Maximo Asset Management 6.2 Fix Pack 7 package
    from IBM Fix Central.

 2) After you have downloaded the max627upd.exe file, right-click the
    file and select Open.
    You can also open the file by double-clicking it.

 3) In the Choose Install Folder window, ensure that the fix pack is
    installed in the maximo_root folder.

 4) Click Next and follow the onscreen instructions.

 5) If the Install Complete window displays an error message, close
    the window and check the installation log of Maximo Asset Management.
    The IBM_Maximo_Release_6.2.7_InstallLog.log can be found on
    the maximo_root folder.

============================================================================
6. Completing the fix pack installation
============================================================================

Configuring Maximo after installing this fix pack

 1) If you use Actuate Reporting, restore the backup copy of the
    actuatei18ntext.properties file to the
    maximo_root\applications\activeportal\WEB-INF\classes\com\actuate\ExternalText
    folder.

 2) Update your database by running the updatedb.bat file from the
    maximo_root/tools/maximo folder.

 3) If you run Maximo Asset Management on Oracle 10g, the Maximo schema
    owner must create the job privilege. To grant the create job
    privilege, sign in to SQL*Plus under the system account and run the
    following command:

        grant create job to maximo schema owner;

 4) Enable the Application Designer application by running the
    pkginstall.bat file from the maximo_root\tools\maximo directory.
```

NOTE   If you are installing this fix pack to update
                Maximo Asset Management 6.2.1, 6.2.2, 6.2.3, 6.2.4, 6.2.5,
                or 6.2.6, skip to Step 5.

5) If you are currently running release 6.2 or an earlier release of
   Maximo Asset Management, update the online help files:

   a. Download the en.zip file from the fix pack 6.2.7 download page
      at www.ibm.com/support.

   b. Extract the contents of the en.zip file to the
      maximo_root\applications\maximohelp\helpweb\webmodule folder on
      the Maximo application server. Ensure that you preserve
      the folder names and structure.

6) Delete your application server cache.

   - For Oracle WebLogic Server 8, delete the following application
     server cache:
       c:\bea\user_projects\domains\mydomain\MAXIMOSERVER\.wlnotdelete.

   - For Oracle WebLogic Server 9, delete the following application
     server cache:
       c:\bea\user_projects\domains\base_domain\tmp.

   - For WebSphere Application Server, delete the following application
     server cache:
     c:\IBM\WebSphere\AppServer\profiles\Custom01\temp\machinenameNode01.

7) If you run WebSphere Application Server release 6 with
   SQL Server 2005, an error occurs when you start the server. To avoid
   this error, add the following parameter to the end of the mxe.db.url
   property in your maximo.properties file:

       &secureLevel=0

   For example:
   mxe.db.url=jdbc:inetdae7:hostname:port?
database=dbname&language=us_english&nnowarnings=true&secureLevel=0

8) Delete the Web browser cache on every computer that uses
   Maximo Asset Management.

9) If you use Maximo Adapter for Microsoft Project on WebLogic Server
   version 9, complete the following steps:

   a. If you use Microsoft Windows Vista, update JCOM to the latest
      version of J-Integra for COM.
      For details, see knowledge base article 65892 on the J-Integra
      support Web site.

   b. Log in to the WebLogic Server console.

   c. In the left pane of the console, select Environment > Servers.

   d. On the Summary of Servers screen, click your Maximo server.

   e. On the Settings screen, click the Protocols tab, and then the
      JCOM subtab.

   f. In the left pane, click Lock and Edit.

   g. Select the Enable COM check box and click Save.

h. In the left pane, click Activate Changes.

       i. Log out of the WebLogic Server console.

       j. Stop the application server of Maximo Asset Management and
          restart it.

       k. Log in to the WebLogic Server console.

       l. In the left pane, click Lock and Edit.

       m. In the left pane of the console, select Services > JCOM.

       n. On the Com Resource Classes screen, press the New button,
          specify psdi in the Class Name field, and click OK.

10) Rebuild and deploy the maximo.ear and maximohelp.ear files.
    If you use Actuate reporting, rebuild and deploy the acweb.ear file.

11) Start the application servers and services of
    Maximo Asset Management.

12) If you use Actuate, start the Actuate servers and services.

13) If you use Actuate Reporting, update the Actuate reports.
    For more information, see:

     - "Updated report design files"
     - "Preparing to import report design files"

14) If you use Maximo Enterprise Adapter, enable the external system
    that the adapter connects to:

     a. From the Integration module of Maximo Asset Management,
        select the External Systems application.

     b. Select the external system that you want to disable.

     c. On the System tab, clear the Enabled check box.

15) To check that the Maximo application server is started, run
    Maximo Asset Management.

Enabling the LDAP form-based authentication

 If you already use LDAP authentication, you can switch to use the LDAP
form-based authentication.

 To enable the LDAP form-based authentication in Maximo Asset Management
6.2.7, you must complete virtually all steps that are described in the
system administrator's guide of the products for setting them up for
basic application server authentication.

 The only exception is that you do not uncomment the
<security-constraint> and <login-config> settings in
applications\maximo\maximouiweb\webclient\WEB-INF\web.xml. Instead, you
must add the following lines to
applications\maximo\maximouiweb\webclient\WEB-INF\web.xml:

 <security-constraint>
    <web-resource-collection>

```
        <web-resource-name>MAXIMO UI pages</web-resource-name>
        <description>pages accessible by authorised users</description>
        <url-pattern>/ui/*</url-pattern>
        <http-method>GET</http-method>
        <http-method>POST</http-method>
    </web-resource-collection>
    <web-resource-collection>
        <web-resource-name>MAXIMO UI utility pages</web-resource-name>
        <description>pages accessible by authorised users</description>
        <url-pattern>/webclient/utility/*</url-pattern>
        <http-method>GET</http-method>
        <http-method>POST</http-method>
    </web-resource-collection>
    <auth-constraint>
        <description>Roles that have access to MAXIMO UI</description>
        <role-name>maximouser</role-name>
    </auth-constraint>
    <user-data-constraint>
        <description>data transmission gaurantee</description>
        <transport-guarantee>NONE</transport-guarantee>
    </user-data-constraint>
 </security-constraint>

 <login-config>
    <auth-method>FORM</auth-method>
    <realm-name>MAXIMO Web Application Realm</realm-name>
    <form-login-config>
      <form-login-page>/webclient/login/loginformauth.jsp?appservauth=true</form-
login-page>
      <form-error-page>/webclient/login/loginerror.jsp</form-error-page>
    </form-login-config>
  </login-config>
```

 After you add the lines, rebuild and deploy the maximo.ear and
maximohelp.ear files. If you use Actuate Reporting, rebuild and deploy
the acweb.ear file.

Replacing three-time zones IDs

If you upgrade Maximo Asset Management from release 6.2.1 or 6.2.2 to
release 6.2.3 or later, all three-letter time zones IDs, such as EST and
MST, are removed from the time zone domain.

If you use three-letter time zones IDs in the Time Zone field that is
under the User application, you must replace them with long time zones
IDs.

 Procedure:

 1) Open the User application.

 2) Replace the three-letter time zones IDs with the long time zones IDs
    using any of the following procedures:

    - Replace the time zones IDs one by one using the following table.

    - Replace the time zones IDs by running an update statement directly
      to the database to correct the data. Use the following table as
      reference to replace them.
```

```
     For example, update person set timezone = 'American/Denver'
     where timezone = 'MST'

        Three-letter time zones IDs        Long time zone IDs
              EST                       America/New_York
          CST                       America/Chicago
          MST                       America/Denver
          PST                       America/Los_Angeles
          AST                       America/Anchorage
          GMT                           GB

-------------------------------------------------------------------------
Updated report Design files
-------------------------------------------------------------------------

 If you are using Actuate Reporting, Maximo Asset Management 6.2.7 does
not ship with a precompiled encyclopedia, or with a complete source zip
file, as did previous 6.2.x releases.  Only updated, individual report
design files are delivered with this fix pack.

 For more details, see
 http://www-01.ibm.com/support/docview.wss?uid=swg21438945

 Review the issues at the end of the readme to determine which updated
report design files you will use.

-------------------------------------------------------------------------
Preparing to import report files
-------------------------------------------------------------------------

 If you use Actuate Reporting, before you update your report files,
you must confirm that the fix pack is installed, and back up your
directories, files, and modified or custom reports.

 When you include any updated report design files of
Maximo Asset Management 6.2.7, any modifications that you made to reports
are overwritten.  Therefore, be careful to backup your custom report
design file

 Procedure:

 1) If you run Maximo Asset Management on IBM AIX® and Oracle, apply
    Oracle Patch #2896876:

     a. Download this patch from the Oracle Support Web site.

     b. After you run the patch, shut down the Actuate processes on the
        AIX server to apply the change, and restart them.

 2) Sign in to the Actuate Management Console to confirm that you are
    running Actuate 8 fix 5. If the system version does not read Actuate
    8 fix 5, contact IBM Software Support.

 3) Run the version.bat file in the maximo_root\applications\maximo
    directory to confirm that you have Maximo Asset Management 6.2.7
    installed.

 4) Back up your Reports Encyclopedia:

     a. Stop the Actuate Process Management Daemon (PMD) service.
```

b. On the Actuate iServer Release 8, go to the directory that
       contains the Reports Encyclopedia and copy it.

       If you run Actuate on a Windows operating system,
       the Reports Encyclopedia is in the
       drive_letter:Actuate8\iServer\encyc folder.

       If you run Actuate on operating systems such as UNIX® or Linux®,
       the Reports Encyclopedia is in the
       iServer_install_directory/AcServer/encyc directory.

       If you are upgrading from release 6.2.1 to release 6.2.7 and use
       e-queries on a non-English database, see issue 07-25975 in the
       "Resolved issues" section.

    c. Restart the Actuate Process Management Daemon (PMD) service.

5) Back up your modified or custom compiled report design files:

    a. Sign in to the Management Console.

    b. From the Reports Encyclopedia, navigate to the first customized
       report.rox file.

    c. Copy the .rox file and store it in a file location outside of
       the Reports Encyclopedia.

    Repeat this process for each customized .rox file.

6) Back up your modified or custom report design files:

    a. Insure that you have backup copies of your report design
       files (.rod) and libraries (.rol) in the 'Custom' report
       subfolder before proceeding with any Service Pack report design
       file updates.

Additional system properties files

 This release provides you with the following three additional properties
files: additionaldoclink.properties, additionalrsse_maximo.properties,
and additionalwebclient_maximo.properties. These files were added to
provide you with enhancements to your existing properties files without
having to overwrite them.

Additional system properties for the doclink.properties file

 The additionaldoclink.properties file contains the following new
properties:

  * mxe.doclink.multilang.aix.websphere. If you run attached documents
    on an IBM AIX platform that uses WebSphere Application Server, you
    can use this property to enable the support for special characters
    on in supported languages such as Chinese (Simplified or Traditional),
    German, Japanese, or Korean.

  * mxe.doclink.doctypes.topLevelPaths. This property was added as a
    result of APAR IZ30703. The property specifies the top-level doclink
    directory to use for all document folders.

* mxe.doclink.doctypes.allowedFileExtensions. This property was added
  as a result of APAR IZ30703. The property specifies the file name
  extensions that can be attached. Files with a file name extension
  that is not defined in this property cannot be attached. Some of the
  values that you can use are: pdf, zip, xt, doc, dwg, gif, jpg, csv,
  xls, ppt, xml, xsl, bmp, and html.

Adding new system properties for the doclink.properties file

1) If you run attached documents on an AIX platform that uses
   WebSphere Application Server and you need support for special
   characters in supported languages, enable the
   mxe.doclink.multilang.aix.websphere property by setting the value
   to true and adding the property to your doclink.properties file.

      For example:
         mxe.doclink.multilang.aix.websphere=true

2) If you are using either Attached Documents or Direct Print or both
   before you upgrade to release 6.2.6, configure the
   mxe.doclink.doctypes.topLevelPaths and
mxe.doclink.doctypes.allowedFileExtensions
   properties:

    a. Configure the mxe.doclink.doctypes.topLevelPaths property by
       setting the "Default File Path" value that you specified in
       the "Manage All Document Folders" window as a subdirectory of
       this Top Level Doclink directory.

       To do so, enter either one value or multiple values separated
       by a comma (,).

          For example:

          mxe.doclink.doctypes.topLevelPaths = C:\\DOCLINKS

          mxe.doclink.doctypes.topLevelPaths =
          C:\\DOCLINKS,C:\\DOCLINKS2

    b. Add the file name extensions to the
       mxe.doclink.doctypes.allowedFileExtensions property.

          For example:
          mxe.doclink.doctypes.allowedFileExtensions =
          pdf,zip,txt,doc,dwg,gif,jpg,csv,xls,ppt,xml,xsl,bmp,html.

       Depending on the needs of the user, the system administrator
       can add other types of files, such as htm or tif, to the list
       of values.

          For example:

          mxe.doclink.doctypes.allowedFileExtensions =
          pdf,zip,txt,doc,dwg,gif,jpg,csv,xls,ppt,xml,xsl,bmp,html,
          htm,tif.

Additional system properties for the rsse_maximo.properties file

 If you use Actuate Reporting, the additionalrsse_maximo.properties file
contains the new maximo.dbusername.casesensitive property. With this
property, you can have case-sensitive user names.

Adding system properties for the rsse_maximo.properties file

   If you use Actuate Reporting, you can set the product to save
user names as uppercase. But if you want to have case-sensitive user
names, enable the maximo.dbusername.casesensitive property by setting
the value to true and adding the property to your rsse_maximo.properties
file.

Additional system properties for the webclient.properties file

 The additionalwebclient.properties file contains the following new
properties:

  * webclient.multibrowsersupport. The property was added as a result
    of issue 06-17719. The default value is true. With this property,
    you can use multiple tabs in Internet Explorer 7 while you are
    working with Maximo Asset Management.

  * webclient.quickinsertusedefaultquery. The property was added as a
    result of APAR IZ06564. This property applies to users who select
    the Quick Insert portlet on the Start Center.

  * webclient.usedefaultbuttons. The property was added as a result of
    APAR IZ06564. This property applies to users who press Enter after
    they specify data in a table row. In release 6.2.1, if you press
    Enter, the software does not create a table row. The default value
    in releases above release 6.2.1 has changed. When you set this
    property to false, specify data in a table row, and press Enter,
    the software no longer creates a table row.

Adding system properties for the webclient.properties file

  1) If you want to use multiple tabs with Maximo Asset Management
     while you are using Internet Explorer 7, enable the
     webclient.multibrowsersupport property by keeping the value as
     true and adding the property to your webclient.properties file.

  2) If you want Maximo Asset Management to use your default query when
     a quick insert into an application is selected, enable the
     webclient.quickinsertusedefaultquery property by keeping the value
     as true and adding the property to your webclient.properties file.

        For example:
        webclient.quickinsertusedefaultquery=true

  3) To prevent Maximo Asset Management from creating a row when you
     specify data in a table row and press Enter, set the
     webclient.usedefaultbuttons property to false and add it to your
     webclient.properties file.

        For example:

```
        webclient.usedefaultbuttons=false
```

Adding and configuring the mxe.directprint.inherited.attachments property

 The mxe.directprint.inherited.attachments property specifies whether
the software prints inherited attachments such as job plans with a work
order and any attachments on the work order. If you are using direct
print with inherited attachments before you upgrade to
Maximo Asset Management fix pack 6.2.4, complete the following steps:

   1) In the maximo.properties file, type the
      mxe.directprint.inherited.attachments property and add it to the
      file.

   2) To print the work order with the attachments that it contains and
      the inherited attachments, set the property to 1 (true).

      NOTE   If you set the property to 0 (false), the inherited
               attachments do not print out.

   3) Rebuild and redeploy the maximo.ear file.

Updating the web.xml file

 You must update your web.xml file to prevent cross-site scripting.

  Procedure:

   1) Uncomment the cross-site scripting sections of the
      update_sampleweb.xml file and add the text that this file contains
      to your web.xml file.

   2) Add the following lines of code to the servlet-mapping tags
      section in the web.xml file:

          <servlet-mapping>
          <servlet-name>sessionservlet</servlet-name>
          <url-pattern>/servlet/sessionservlet</url-pattern>
          </servlet-mapping>

   3) Add the following lines of code to the other servlet tags section
      in the web.xml file:

          <servlet>
          <servlet-name>sessionservlet</servlet-name>
          <servlet-class>psdi.webclient.servlet.SessionServlet</servlet-class>
          </servlet>

   4) Rebuild the EAR files.

Enabling Maximo to print detail reports and detail reports with attachments
----

 If the toolbar of Maximo Asset Management displays the details button
for a report, you must enable the product to print detail reports and

detail reports with attachments. To do so, you change the print details
report icon for the toolbar in the Report Administration application.

   Procedure:

   1) On the List tab of the Report Administration application, select
      the detail report to be printed with attachments.

   2) In the Toolbar Image field of the Report tab, choose the
      direct print with attachments option from the Select Value menu.

      After you select this option, Maximo Asset Management sets it as
      default.

   3) Click Save.

Enabling Maximo e-commerce Adapter
----

   1) Rebuild the e-maximo.ear file by running the following command:

      Maximo directory\deployment\e-buildmaximoear.cmd

   2) Redeploy the e-maximo.ear file to your application server.

===
6. Resolved issues
===

The following issues were resolved for Maximo Asset Management v6.2.7

APAR: IZ65467

Issue(s): 09-22205

Application: Application Designer

Description: If you use Maximo Asset Management with Transportation,
the Application Restriction within the Campaigns (Tr) application does
not work.

APAR: IZ75718

Issue(s): 10-13904

Application: Application Designer

Description: If you modify the Purchase Request application, the
WebSphere server crashes.

APAR: IZ77531

ISSUE: 10-15209

Application: Application Designer

Description: The validation for MAXMENUSET does not work.

APAR: IZ79277

ISSUE: 10-15974

Application: Application Designer

Description: If SSL is enabled and you try to export the application xml file, the xml file you saved is not exported.

APAR: IZ81007

Issue(s): 10-16618

Application: Application Designer

Description: When you try to duplicate the Work Order application, the dialog box where you can name the copy is not displayed and the following error occurs: "Required Field application is blank".

APAR: IZ83032

Issue(s): 10-17222

Application: Application Designer

Description: On List tabs, when you use the download button, the empty dates are filled with the word 'null'.

APAR: IZ67197

ISSUE: 09-23144

Application: Assets

Description: If you try to change an asset item number by selecting an item number from the Inventory application, an error occurs.

APAR: IZ69758

ISSUE: 10-10856

Application: Assets

Description: When you select 'View Asset Details' from the Safety Related Assets sub tab, the following error message is displayed: "A relationship called DEPLOYEDASSET does not exist for the SPRELATEDASSET business object."

APAR: IZ70291

ISSUE: 10-11019

Application: Assets

Description: If you add subassemblies and mark one or more for deletion on the Spare Parts tab, and then return to the List tab, you are not prompted to save or discard deletions.

APAR: IZ70709

ISSUE: 10-11145

Application: Assets

Description: When you are generating a PM work order, and the asset you are using is on one of the PMs, removing or adding an asset to the Spare Parts tab in the Subassemblies table causes infinite looping.

APAR: IZ77530

Issue(s): 10-15207

Application: Assets

Description: When you perform a Hazards lookup, if the same hazards exist in different organizations, the same hazards appear multiple times on the list.

APAR: IZ77716

Issue(s): 10-15352

Application: Assets

Description: If you move the child record to a location different from the parent, the parent-child association is lost.

APAR: IZ79173

Issue(s): 10-15910

Application: Assets

Description: When you try to perform a mass move to another bin, a refetch error occurs.

APAR: IZ82379

Issue(s): 10-17000

Application: Assets

Description: When you try to transfer a rotating asset to another bin
in the same storeroom, using the 'Move/Modify Assets' dialog,
the inventory balances are not correctly updated.

APAR: IZ80994

Issue(s): 10-16617

Application: Bulleting Board

Description: The Description columns of unexpanded rows show the value
of the Organization.

APAR: IZ71304

ISSUE: 10-11315

Application: Calendars

Description: When you apply a shift on a period and then apply this
shift again on a different period, the first applied shift is deleted.

APAR: IZ74300

ISSUE: 10-12605

Application: Charts of Accounts

Description: If the end date of the Financial period is the same as the
date you are working in, an error occurs when you try to add a new roll
to the Actuals tab.

APAR: IZ74896

ISSUE: 10-13203

Application: Classifications

Description: when you duplicate a classification, the classification
attributes are not duplicated.

APAR: IZ75271

ISSUE: 10-13571

Application: Classifications

Description: When you are using a classification, you can view the
assets with that classification even though you do not have access to
the site the asset belongs to.

APAR: IZ77500

ISSUE: 10-15215

Application: Classification

Description: If you classify and save the record, clear all
classifications but do not save the record, then reclassify this record
by returning with a value from the Classifications application,
the attributes are duplicated.

APAR: IZ54178

Issue(s): 09-15565

Application: Companies

Description: When you create a work order from a job plan that has
service items, the following error occurs: "BMXAA4187E - A relationship
called COMPANY does not exist for the WPSERVICE business object."

APAR: IZ73416

ISSUE: 10-12105

Application: Configure

Description: After you configure the database, some records are missing
from the maxattributecfg SQL server script.

APAR: IZ77349

ISSUE: 10-15112

Application: Configurable Start Center

Description: In the Inbox Portlet, the label of the Description field
label is always shown in the Base Language.

APAR: IZ76932

ISSUE: 10-14938

Application: Crafts

Description: When you create a craft and select a skill level, the skill
level description is not automatically populated.

APAR: IZ05510

Issue(s): 07-25655

Application: Crontask Administration

Description: Sometimes, the PM crontask runs twice a day.

APAR: IZ72557

ISSUE: 10-11666

Application: Desktop Requisitions

Description: When you are creating a Material Requisition for a direct issue item, no error message is displayed when you try to distribute GL accounts.

APAR: IZ76206

ISSUE: 10-14327

Application: Desktop Requisitions

Description: If you have an item with a Vendor line that has a Last Cost value and you try to change the Unit Cost to a lesser amount than the one in the current invvendor.lastcost, an error occurs.

APAR: IZ76313

ISSUE: 10-14378

Application: Doclink Browser

Description: After you apply the cumulative hot fix, you cannot add documents to the Library.

APAR: IZ75952

ISSUE: 10-14157

Application: Domains

Description: If you create a cross over domain to cross data from the Site table to the Locations table, the data does not cross over.

APAR: IZ59107

ISSUE: 09-17424

Application: Drill Down Related Functionality

Description: Decommissioned assets and assets with status of a synonym of decommissioned are displayed on the Asset Hierarchy drill down menu.

APAR: IZ72408

ISSUE: 10-11542

Application: Electronic Signature

Description: When a multilanguage electronic signature is required,
the message displayed is not properly translated.

APAR: IZ75509

Issue(s): 10-13689

Application: Electronic Signature

Description: E-Signature does not update the reason for all records
changed on the LOGINTRACKING table in the Database Configuration
application.

APAR: IZ73781

ISSUE: 10-12307

Application: Equipment

Description: If you create a meter group, create an item, associate the
group you have created to this item and use the item on a PO record, the
meters tab is empty when you receive this PO.

APAR: IZ75154

ISSUE: 10-13457

Application: IBM Tivoli Monitor Agent for Maximo

Description: When LDAP is being used for authentication, the monitoring
add-on for Tivoli Monitoring does not work.

APAR: IZ81198

ISSUE: 10-16719

Application: Incidents

Description: You can specify a record as its own originator, creating
an infinite loop.

APAR: IZ83157

Issue(s): 10-17317

Application: Incidents

Description: When you try to delete activities from Incidents and
Problems records, the following message is displayed:

"Cannot delete because it is a follow-up"

APAR: IZ69492

ISSUE: 10-10788

Application: Inventory

Description: If you return a rotating item, decommission this item and then delete it, the value of the current balance is incorrectly calculated.

APAR: IZ72127

ISSUE: 10-11392

Application: Inventory

Description: If you change the commodity group of an item, the invcost table is not properly updated.

APAR: IZ72158

ISSUE: 10-11421

Application: Inventory

Description: A GL shrinkage account is required for Physical Count adjustments.

APAR: IZ73695

ISSUE: 10-12261

Application: Inventory

Description: You are able to change an item to rotating even though this item is added to an Item Assembly Structure.

APAR: IZ75739

ISSUE: 10-13902

Application: Inventory

Description: When you try to receive a non-condition rotating item that has a default bin, the following error message is displayed:
"Receipt failed to be created for selected row 1. Field to condition code is read only."

APAR: IZ76327

ISSUE: 10-14409

Application: Inventory

Description: If you create and associate an asset to a rotating item, and increase the balance of this rotating item by one, the line cost is shown as 0 when you view an entry for a Transaction type of Transfer.

APAR: IZ77090

Issue(s): 10-15015

Application: Inventory

Description: When you perform a reconciliation, the GL Look Up brings the information from the user default site.

APAR: IZ77425

Issue(s): 10-15173

Application: Inventory

Description: When you return an item, the inventory balance is incorrectly calculated.

APAR: IZ78232

ISSUE: 10-15625

Application: Inventory

Description: Lotted items that have 2 or more bins with the same lottnum cannot be transferred using the Transfer Current Item process.

APAR: IZ70672

Issue(s): 10-11141

Application: Invoice

Description: When you approve an invoice, the Upper Service Amount and the Lower Service Amount tolerances are only applied when at least one invoice line references a po line.

APAR: IZ72180

ISSUE: 10-11419

Application: Invoice

Description: When the invoice quantity is the same as the receipt quantity, you can approve an invoice without limitation.

APAR: IZ74060

ISSUE: 10-12457

Application: Invoice

Description: When you create an Invoice from a Labor contract, the contract reference number is not recorded.

APAR: IZ74461

Issue(s): 10-12652

Application: Invoice

Description: If you are buying materials using a different currency from the one set as base currency, the wrong data is written in invoicetrans table when you approve the invoice.

APAR: IZ74557

ISSUE: 10-12693

Application: Invoice

Description: In the Labor Reporting application, if you cancel an invoice that is related to a transaction line, the invoice field is not cleared.

APAR: IZ76759

ISSUE: 10-14747

Application: Invoice

Description: when you are allocating items, the total of the service line to be allocated is different from the amount allocated, therefore an error occurs.

APAR: IZ76915

ISSUE: 10-14937

Application: Invoice

Description: If you create an invoice record to receive only part of the items on a PO record, this PO record is closed even though there are still items that must be received.

APAR: IZ77619

ISSUE: 10-15298

Application: Invoice

Description: When you approve an invoice, an invoice match record is created for non-user matched receipts and an error occurs if the invoice quantity does not match the invoice match quantity.

APAR: IZ78108

Issue(s): 10-15545

Application: Invoice

Description: If a record has a balance of zero, and you try to perform a return transaction, the INVCEVAR is not created.

APAR: IZ80116

ISSUE: 10-16171

Application: Invoice

Description: When you create an Invoice record, the receipt quantity is doubled.

APAR: IZ69614

ISSUE: 10-10814

Application: Issues and Transfers

Description: If a requisition number is used in two sites, no reserved items are displayed when you try to create a requisition using this requisition number.

APAR: IZ71817

ISSUE: 10-11348

Application: Issues and Transfers

Description: When you are issuing items for a work order using the select Value option on the work order filed, you are able to see complete and closed work orders on the list.

APAR: IZ72166

ISSUE: 10-11418

Application: Issues and Transfers

Description: An error occurs when you try to Move a Rotating Asset from a Storeroom Location if you previously moved this Asset from an Operating Location to a Storeroom.

APAR: IZ72800

ISSUE: 10-11776

Application: Issues and Transfers

Description: You cannot perform an inter-store transfer using the courier function.

APAR: IZ73728

ISSUE: 10-12263

Application: Issues and Transfers

Description: When you perform a Transfer In process, and you select the PO Items using the Transit button, the status of the generated transaction is null.

APAR: IZ74747

ISSUE: 10-12813

Application: Issues and Transfers

Description: In the Issues and Transfer application, on Filter Row, you are able to edit the Item description field.

APAR: IZ74885

ISSUE: 10-13208

Application: Issues and Transfers

Description: On the Issue tab, when you enter a new itemnum, specify the fields, and then tab out of the Issue tab, the Bin, Description and Unit cost fields are not updated.

APAR: IZ78231

ISSUE: 10-15626

Application: Issues and Transfers

Description: You can process canceled internal POs.

APAR: IZ79887

ISSUE: 10-16065

Application: Issues and Transfer

Description: You cannot Transfer In more than the original transfer Out quantity on a single transfer.

APAR: IZ80120

ISSUE: 10-16170

Application: Issues and Transfers

Description: If a MEA message engine stops in the middle of the process and starts again, all inventory balances are doubled when you save multiple issue records.

APAR: IZ80792

ISSUE: 10-16438

Application: Issues and Transfers

Description: If a MEA message engine stops in the middle of the process and starts again, the reservation is doubled when you save an issue transaction.

APAR: IZ76030

ISSUE: 10-14203

Application: Items

Description: If you create rotating items and asset, and later decide to use a Condition Enabled functiony, the items and assets that you have created before are not populated with a condition code.

APAR: IZ80911

ISSUE: 10-16512

Application: Items

Description: If a rotating item is associated with a storeroom location, and you set the 'rotating' flag of this item to false, the rotating item field is a read-only field.

APAR: IZ74911

ISSUE: 10-13209

Application: Item Assembly Structures

Description: When you apply an Item Assembly Structure on rotating items, the inventory balance is incorrectly updated.

APAR: IZ73486

ISSUE: 10-12154

Application: Job Plan

Description: If a user belongs to multiple security groups, and one of the groups has access to the Job Plan application, this user can access and modify job plans created on a site that is not their default site.

APAR: IZ74059

ISSUE: 10-12393

Application: KPI Manager

Description: The graphs are not being displayed on the Start Center.

APAR: IZ25639

Issue(s): 08-17852

Application: Labor

Description: The mandatory function for the Calendar field is not working as expected.

APAR: IZ71937

ISSUE: 10-11343

Application: Labor Reporting

Description: When you use the Labor dialog box to enter a labor, the information associated to the labor record is not automatically populated.

APAR: IZ75277

ISSUE: 10-13583

Application: Lease & Rental Contracts

Description: The Total Cost field is not working correctly.

APAR #: IZ74145

Issue(s): 10-12500

Application: Locations

Description: If you have more than 200 records, only the first 200 records appear on the Excel spreadsheet when you click the download link.

APAR: IZ76077

ISSUE: 10-14250

Application: Locations

Description: If you create a Location, change the Type field and save the record, the Shift field is populated. However, when you try to delete this entry, the following error message is displayed:
"Please enter a calendar before entering a shift."

APAR: IZ76205

ISSUE: 10-14326

Application: Locations

Description: If the Location has "" in the identifier, you cannot add a parent or a child location to the record.

APAR: IZ76408

ISSUE: 10-14501

Application: Locations

Description: If you create a Location, save the record, and then try to change the status of this record, the value of the Status Description field is taken from different domains.

APAR: IZ77571

Issue(s): 10-15245

Application: Locations

Description: When you duplicate a Location, a database error 1 occurs.

APAR: IZ80808

ISSUE: 10-16478

Application: Locations

Description: When you change the status of a record, the following error message is displayed: "cannot change status to same status." However, after you click the OK button to close the message, the status of the record is changed to the new status.

APAR: IZ80889

ISSUE: 10-16483

Application: Material Requisitions

Description: When the costs of a record POLINES are distributed to the same GL Debit account using different percentages, the POCOST of all lines are distributed using the same percentage.

APAR: IZ70916

ISSUE: 10-11220

Application: Maximo Enterprise Adapter

Description: When you import inactive Labor records in Oracle, a unique constraint error occurs.

APAR: IZ77350

ISSUE: 10-15110

Application: Maximo Enterprise Adapter

Description: When a message engine is restarted, the values for reservations and work order actual costs are saved incorrectly.

APAR: IZ73017

ISSUE: 10-11887

Application: Multi-Language Utility

Description: If you configure a Multi-language environment and select a language different from the base language, the labels of the filed on the View Cost tab are shown in the base language.

APAR: IZ62827

ISSUE: 09-19915

Application: Performance Issues

Description: If a main record contains an attachment control, the system performance becomes slow when you try to open the main record and run the doclinks related query.

APAR: IZ47727

Issue(s): 09-12338

Application: Preventive Maintenance

Description: If you generate a work order from a PM cron task, the related asset location is not populated.

APAR: IZ71070

ISSUE: 10-11241

Application: Preventive Maintenance

Description:If you create a PM record for multiple sites and you try to
delete the record in one of the sites, the following error message is
displayed: "Cannot delete a PM that is referenced by a measurement
point."

APAR: IZ71053

ISSUE: 10-11242

Application: Preventive Maintenance

Description: When you are creating a work order from a hob plan that has
materials from multiple sites, an error occurs.

APAR: IZ73982

ISSUE: 10-12361

Application: Preventive Maintenance

Description: You cannot correctly create a work order if the PM record
has an inactive child record.

APAR: IZ74179

ISSUE: 10-12573

Application: Preventive Maintenance

Description: If you have a PM contest that runs daily, the process fails
on the same day. However, the process runs on the next day creating
duplicated records.

APAR: IZ74502

ISSUE: 10-12664

Application: Preventive Maintenance

Description: If you are creating a work order using a PM crontask, but
your user profile belongs to a different site or organization than the
one defined on the PM, an error occurs.

APAR: IZ77540

ISSUE: 10-15211

Application: Preventive Maintenance

Description: When you create a work order from a PM record, the error
message 'pm#MalforedHier' is displayed.

APAR: IZ80145

Issue(s): 10-16235

Application: Preventive Maintenance

Description: If you select View PM from locations, the system takes
five minutes to respond.

APAR: IZ81014

Issue(s): 10-16615

Application: Preventive Maintenance

Description: If you duplicate and save PM record, the Adjust Next Due
Date field becomes read-only.

APAR: IZ70601

ISSUE: 10-11092

Application: Purchase Contracts

Description: If you reset the contract line sequence to start with 999,
the following message is displayed: "Not a valid value."

APAR: IZ72063

ISSUE: 10-11382

Application: Purchase Contracts

Description: When you cancel a contract the PR related to it is not
reopened.

APAR: IZ72244

ISSUE: 10-11426

Application: Purchase Contracts

Description: After you apply a hot fix, the Release Cost of
Purchase Contracts is incorrectly calculated.

APAR: IZ80297

Issue(s): 10-16298

Application: Purchase Contracts

Description: The Release Cost is incorrectly calculated.

APAR: IZ70659

ISSUE: 10-11117

Application: Purchase Orders

Description: On the PO Lines tab, in the Attention field, when you search for Person records the result displays an incomplete list.

APAR: IZ75109

ISSUE: 10-13376

Application: Purchase Orders

Description: If you return a service and then invoice this service, the Received Line cost for the PO is incorrectly calculated.

APAR: IZ75217

ISSUE: 10-13568

Application: Purchase Orders

Description: When you change a PO, and then cancel the PO because of this change, the PO number is not updated on the RFQ Lines.

APAR: IZ75832

ISSUE: 10-14043

Application: Purchase Orders

Description: POSET and POLINESET are not closed when done, causing an out of memory error.

APAR: IZ76348

ISSUE: 10-14456

Application: Purchase Order

Description: When you create a PR, distribute the cost between different GL Accounts, approve the PR and create a PO record from this PR, the following message is displayed when you try to approve the PO: "Could not change PO status to APPR - The Debit or Credit General Ledger

account is not specified."

APAR: IZ77551

ISSUE: 10-15221

Application: Purchase Orders

Description: When you perform a same-site courier transfer, the conversion field is a read-only field.

APAR: IZ77568

ISSUE: 10-15251

Application: Purchase Orders

Description: When you create an internal PO, the INCOST control account is not used for the items.

APAR: IZ79668

ISSUE: 10-16016

Application: Purchase Orders

Description: When you create a PO from a PR record, the costlinenum on the PO does not match the costlinenum on the PR.

APAR: IZ81408

Issue(s): 10-16867

Application: Purchase Orders

Description: If many PO lines share the same contract, the memory footprint shown on the heap memory dump in Maximo Core occupies a greater percentage than the expected.

APAR: IZ66225

ISSUE: 09-22722

Application: Purchase Requisitions

Description: When you change an Inventory Item to a new location, the value of the Last Receipt Cost changes.

APAR: IZ70319

ISSUE: 10-11035

Application: Purchase Requisitions

Description: If you create a Price Agreement, use this record to create
a PR, specify the required information and save the record,
the Unit Cost on the PR line is recalculated.

APAR: IZ70592

ISSUE: 10-11083

Application: Purchase Requisitions

Description: When a PO is canceled, the status of all PR records related
to this PO are changed to approved.

APAR: IZ72943

ISSUE: 10-11846

Application: Purchase Requisitions

Description: If a PR belongs to two sites, and in one of the site this
PR is waiting for approval while on the other it has already been
approved, the PRNUM of the PR waiting for approval is copied into the
PO contract.

APAR: IZ77103

Issue(s): 10-15016

Application: Purchase Requisitions

Description: When you create a PR with no Vendor info and no PRLINE,
change the Ship to address, go back to PRLINE, add an item, and save
the record, the ORGID of the PR is changed to match the ship to
address.

APAR: IZ77008

Issue(s): 10-14989

Application: Quick Reporting

Description: If you are creating a quick report, and you click the
Cancel button on the save confirmation message dialog box, the
incorrect message appears.

APAR: IZ60808

ISSUE: 09-18716

Application: Receiving

Description: If you use a currency code with the exchange rate greater

than 1, the loaded cost value is incorrectly calculated.

APAR: IZ61871

ISSUE: 09-19197

Application: Receiving

Description: When you are receiving an item with multiple condition codes, an error occurs.

APAR: IZ72938

ISSUE: 10-11844

Application: Receiving

Description: When you try to change the inspection status, the following message is displayed: "Record has been updated by another user. Refetch and try again."

APAR: IZ75011

ISSUE: 10-13243

Application: Receiving

Description: If a receipt has fractions on the Quantity or Conversion Factors values, you cannot change the status of the receipts from WINSP to COMP.

APAR: IZ75181

ISSUE: 10-13456

Application: Receiving

Description: If the Issue to field is required, but you do not specify this field when you are receiving items, an error message is displayed as expected. However, when you click OK to close the error message, the service received quantity is doubled on the PO line.

APAR: IZ75376

Issue(s): 10-13646

Application: Receiving

Description: When you receive lotted items, the invetory balance is not updated.

APAR: IZ76577

Issue(s): 10-14542

Application: Receiving

Description: If you receive multiple partial receipts of service,
a refetch error occurs.

APAR: IZ77497

Issue(s): 10-15192

Application: Receiving

Description: If you receive a PO record with negative quantity
service line, the following error message is displayed:
"Cannot return more than what has been received."

APAR: IZ77591

ISSUE: 10-15304

Application: Receiving

Description: When you change the inspection status, the GL Debit Account
does not use the INVCOST Control Account as default.

APAR: IZ80006

ISSUE: 10-16128

Application: Receiving

Description: If you enable a send message engine in WebLogic, the
inventory balance is doubled when you save a receipt.

APAR: IZ81247

Issue(s): 10-16749

Application: Receiving

Description: If the MEA message engine is brought back up and you
delete and save a receipt, the total cost and received
quantity fields of the received POLINE are updated.

APAR: IZ71500

ISSUE: 10-11319

Application: Reorder

Description: You can reorder direct issued items that have no vendor
specified, even though the required date is greater than the current

date.

APAR: IZ66142

Issue(s): 09-22687

Application: Reporting – Actuate

Description: If a work order has more Actual Labor Entries than the number that fits on one page, the Actual Labor cost page total includes the value of the first line on the next page. Therefore, the page totals are incorrectly calculated on work order details reports.

APAR: IZ68743

ISSUE: 10-10624

Application: Reporting - Actuate

Description: Work order details report shows date 2030 as 1930.

APAR: IZ69296

Issue(s): 10-10778

Application: Reporting – Actuate

Description: When you run the Asset Cost Rollup Report on SQL server, the report generates an SQL statement that uses Aliases.

APAR: IZ73518

Issue(s): 10-12166

Application: Reporting – Actuate

Description: When a char data type is converted into a datetime data type, the value of the datetime data is out-of-range.

APAR: IZ73892

Issue(s): 10-12324

Application: Reporting – Actuate

Description: If you run the Asset Cost Roll Update Report, the RETURNS are added to the Asset YTD Totals.

APAR: IZ74151

ISSUE: 10-12501

Application: Reporting – Actuate

Description: When you run a report, the Actuate encyc folders are not carried over to Maximo, causing SOAP errors to be thrown intermittently.

APAR: IZ75757

ISSUE: 10-13976

Application: Reporting - Actuate

Description: Date parameter values are configured as two digits for the year and are incorrectly interpreted by the report server.

APAR: IZ76046

Issue(s): 10-14204

Application: Reporting – Actuate

Description: If the number of PO Lines is enough to give you more than one page when the detail report is printed, the page footer overwrites the last 2 lines of detail on the full page.

APAR: IZ76173

ISSUE: 10-14279

Application: Reporting - Actuate

Description: Scheduled reports are not delivered by email.

APAR: IZ80191

Issue(s): 10-16232

Application: Reporting – Actuate

Description: When you run a report, no records are returned if there is a right parenthesis in the where clause.

APAR #: IZ80774

Issue(s): 10-16437

Application: Reporting – Actuate

Description: If you attach a png file to a work order report and then print this report, the png file is not printed.

APAR: IZ77851

Issue(s): 10-15391

Application: Reporting - Actuate Reports

Description: The size of the Extended Cost label is too small in
localized reports, and the value displayed is truncated.

APAR #: IZ72214

Issue(s): 10-11427

Application: Reporting - Administration

Description: Maximo continues to validate the URL in Direct Print even
though you set the ValidateURL property to False.

APAR: IZ72302

Issue(s): 10-11478

Application: Reporting – Administration

Description: The work order detail report displays the incorrect
realted records.

APAR: IZ73528

ISSUE: 10-12167

Application: Reporting – Administration

Description: You cannot view the scheduling options of scheduled reports
and queries in Maximo.

APAR: IZ75207

ISSUE: 10-13488

Application: Reporting – Administration

Description: When you run a query, not all labels are translated to a
Language that is not English, even though the Locale for this language
is set in the user profile.

APAR: IZ73549

ISSUE: 10-12215

Application: Request for Quotation

Description: When you create a PO from an RFQ record, the GL debit
account filed displays an unexpected value.

APAR: IZ80051

Issue(s): 10-16145

Application: Request for Quotation

Description: If you create a PO from an RFQ, the exchange rate field
in the PO is not populated.

APAR: IZ65935

ISSUE: 09-22610

Application: Security Authorization

Description: After you apply Cross-site scripting topic(1389946), you
cannot log in the system if the system generated password that contains
the ">","<" and, or the "%" characters.

APAR: IZ77326

ISSUE: 10-15111

Application: Security Groups

Description: If you change the status of a work order from WAPPR to a
synonym of the same status, but you cannot change the status from the
WAPPR synonym to another synonym.

APAR: IZ75512

ISSUE: 10-13690

Application: Service Request

Description: When you are creating an SR record, you are able to use
attachments that belong to different sites.

APAR: IZ78400

ISSUE: 10-15728

Application: Service Request

Description: When you are creating an SR record, if you use the Select
Action menu option to select values for the Affected Date and
Report Date, theselected value changes to the current date.

APAR: IZ74035

ISSUE: 10-12392

Application: Start Center

Description: Result Set does not order records by decode, even though you set the where clause to do so.

APAR: IZ49533

ISSUE: 09-13088

Application: System - Object

Description: Some Maximo threads hold the references of the Maximo objects and do not release them.

APAR: IZ67900

ISSUE: 10-10234

Application: System – Object

Description: After you upgrade WebSphere from 6.0.2.33 to 6.1.0.25, LDAPSync brings over only the first 500 records you have changed or added. If more changes or additions are made, they will not be synchronized into Maximo.

APAR: IZ68650

ISSUE: 10-10583

Application: System - Object

Description: You cannot manually filter for results in date columns.

APAR #: IZ69114

Issue(s): 10-10723

Application: System – Object

Description: When the database disconnects and becomes available again, not all areas of the applications reconnect.

APAR: IZ73859

Issue(s): 10-12310

Application: System – Object

Description: If you use a custom application that has BLOB data, a row lock contention occurs when you use the "select dummy_blob from dummy_table for update" statement, and the performance of the application is affected.

APAR: IZ74032

ISSUE: 10-12390

Application: System - Object

Description: If you duplicate an asset and immediately move this asset
as a subcomponent of another asset, the time on the ASSETTRANS.DATEMOVED
field is displayed without the seconds.

APAR: IZ74231

ISSUE: 10-12568

Application: System - Object

Description: In the Actuals tab of the Work Order application, if you
enter the "!=XXXX" command to filter the status field, the incorrect
values are returned.

APAR: IZ75236

ISSUE: 10-13489

Application: System – Object

Description: Datetime search queries fail when the time (hh:mm) is
specified after you update AIX from TL06 to TL09.

APAR: IZ78105

ISSUE: 10-15513

Application: System – Object

Description: If you use a language different from the Base Language,
you cannot change the Issue Unit in the Stocked Tool application.

APAR: IZ79110

ISSUE: 10-15878

Application: System – Object

Description: When you duplicate or change a Bulletin Board record, the
POSTBY field is not updated if the message was created by another user.

APAR: IZ80025

ISSUE: 10-16129

Application: System – Object

Description: When you clear the Waiting Materials check box in Security Groups, the security setting for this status is not removed from the Lookup dialog box.

APAR: IZ59594

Issue(s): 09-17800

Application: System – User Interface

Description: If you have the locale set to Swedish or other locale that uses breaking space as a thousands separator, and you use the Download link to send the data that you retrieved to an .xls file, Swedish numbers are not recognized as numbers in the file.

APAR: IZ67255

Issue(s): 09-23134

Application: System – User Interface

Description: The .CSS, .JSP, and .JS files do not reference a correct copyright.

APAR: IZ69076

ISSUE: 10-10703

Application: System - User Interface

Description: If the database connections are lost for any reason, Maximo does not establish new connections and you cannot use the Maximo application.

APAR: IZ70871

ISSUE: 10-11203

Application: System – User Interface

Description: When single sign-on is enabled, some data disappear from the login tracking table.

APAR: IZ73193

ISSUE: 10-11988

Application: System - User Interface

Description: The icon used to create work order on the Quick Insert Portlet is not working correctly.

APAR: IZ74135

ISSUE: 10-12499

Application: System - User Interface

Description: If you press the Enter key to fetch for results in an
Advanced Search, nothing happens.

APAR #: IZ75023

Issue(s): 10-13254

Application: System – User Interface

Description: After you install the 5.2.5 patch, you can no longer start
reports with report number or report lookup ID greater than 999.

APAR: IZ76321

Issue(s): 10-14408

Application: System – User Interface

Description: If you use tab to move to the Duration field of a task,
and you modify this field and press enter, the mouse focus is lost.

APAR: IZ76691

ISSUE: 10-14655

Application: System - User Interface

Description: After you click the Clear Changes button, you cannot
perform a search on the List screen.

APAR: IZ77985

ISSUE: 10-15462

Application: System - User Interface

Description: In the Labor Reporting application, if you select a date
using the lookup function, the date of the first record of the
Transactions table is populated instead of the filter text box.

APAR: IZ78312

Issue(s): 10-15701

Application: System – User Interface

Description: When you try to export a list of failure codes using the

download button, an internal server error 500 screen is displayed.

APAR: IZ80608

Issue(s): 10-16394

Application: System – User Interface

Description: When you view similar tickets on an incident record, you cannot move from one incident to the other by clicking the arrow beside the ticket number.

APAR: IZ77381

Issue(s): 10-15136

Application: Upgrade

Description: If you are running upgrade with test fix for PMR 46630,999,649, and the process tries to alter a column for which statistics have been defined, ConfigDB fails on SQL Server.

APAR: IZ73442

ISSUE: 10-12111

Application: Users

Description: When you register a user, the Sent time on the email notifying the Maxadmin is one hour ahead of the time the email was received in the Inbox of the Maxadmin.

APAR: IZ75491

Issue(s): 10-13688

Application: View Service Request

Description: After you apply the 6.2.5 fix, if you select a service request from the Open Service Request portlet, you are redirected to the Search for Service Request page instead of the populated view service request screen.

APAR: IZ72757

ISSUE: 10-11727

Application: Workflow

Description: An Invalid Class cast exception is thrown with certain code combinations.

APAR: IZ73231

ISSUE: 10-12036

Application: Workflow

Description: If you cancel a manual input node, the NoStatus Acting setting takes around 30 minutes to reset.

APAR: IZ77552

Issue(s): 10-15222

Application: Workflow

Description: If you route an SR ticket to a workflow, cancel the process when the Routing dialog box is displayed, and then select the 'Show Similar Tickets' action, Maximo hangs with an HourGlass and you must close the browser session to continue.

APAR: IZ69165

ISSUE: 10-10745

Application: Workflow Designer

Description: The Wait Node is fired even though the event you specified to fire the Wait Node has not occurred.

APAR: IZ72477

ISSUE: 10-11600

Application: Workflow Designer

Description: When you view a workflow map in the Work Order application, a red X is displayed instead.

APAR: IZ62293

ISSUE: 09-19337

Application: Work Order

Description: You cannot close a task if this task has materials ordered to it.

APAR: IZ72172

ISSUE: 10-11409

Application: Work Order

Description: When you specify a meter reading value that is higher than

the existing reading, a rollover gets applied and no error message is
displayed.

APAR: IZ72815

ISSUE: 10-11774

Application: Work Order

Description: An error occurs when you try to Invoice against work orders
that have task work orders with the status of CAN.

APAR: IZ73115

ISSUE: 10-11941

Application: Work Order

Description: When you are generating a work order from a PM, the
Change Status dialog box takes around 1 minute to be displayed.

APAR: IZ73675

ISSUE: 10-12264

Application: Work Order

Description: When you enter a tagout ID in the first part of a multipart
textbox, the tagout description is not displayed in the second part.

APAR: IZ74471

ISSUE: 10-12653

Application: Work Order

Description: When you add a crossover task to a work order, crossover
domains added to WOACTIVITY.ASSETNUM and WOACTIVITY.LOCATION do not work,
and the source value for the task does not cross over to populate the
target attribute.

APAR: IZ74704

ISSUE: 10-12764

Application: Work order

Description: After you add a direct issued item to the Material subtab,
you are able to edit the Accept Charge check box.

APAR: IZ74918

ISSUE: 10-13207

Application: Work Order

Description: If an asset is in the Repair or the Storeroom locations, you cannot generate work orders from the PM that contains this asset.

APAR: IZ75517

ISSUE: 10-13699

Application: Work Order

Description: The Accept Rolldown From field on the Meters tab is a read-only field.

APAR: IZ76063

ISSUE: 10-14248

Application: Work Order

Description: If you use a work order record to reorder a service and then remove a PR line from the PR record created during the reorder process, the PR reference is not removed from the Work Order.

APAR: IZ76316

ISSUE: 10-14410

Application: Work Order

Description: When you add planned material to a Task using the PKG storeroom, the following error message is displayed: "Cannot delete work plan material if an actual material exists for it."

APAR: IZ77618

Issue(s): 10-15303

Application: Work Order

Description: when you create a followup work order, the asset priority field and the location priority field are not populated.

APAR: IZ77987

Issue(s): 10-15461

Application: Work Order

Description: If you issue a direct issue item to a work order, you cannot change the status of this work order from WMATL to APPR or INPRG.

APAR: IZ78371

ISSUE: 10-15708

Application: Work Order

Description: When you change the status of a work order, an error occurs when the notification email is sent because the field length on the notification is shorter than on the email table.

APAR: IZ78798

ISSUE: 10-15879

Application: Work Order

Description: If a work order is associated to a contract that has already been closed, and you try to close the work order, an error message is displayed saying that the work order contains unapproved contracts.

APAR: IZ79170

ISSUE: 10-15911

Application: Work Order

Description: If you do not have a default insert site listed on your profile, you cannot see labor actuals.

APAR: IZ80340

ISSUE: 10-16304

Application: Work Order

Description: You can change the status of a work order by coping and pasting the status name using the right click button on your mouse.

APAR: IZ80462

Issue(s): 10-16345

Application: Work Order

Description: When you reapprove a work order, additional reservations are created for planned materials lines of the same item, and inventory reservations are created for planned material lines that were already issued.

APAR: IZ80458

Issue(s): 10-16347

Application: Work Order

Description: When the change event for scheduled start date or target start date is tiggered, the reservation quantity is incorrectly modified.

APAR: IZ81443

Issue(s): 10-16915

Application: Work Order

Description: If you try to change the status of a duplicated work order, two dialog boxes are displayed, the Problem Already Reported dialog and the Change Status dialog.

APAR: IZ82447

Issue(s): 10-16998

Application: Work Order

Description: If you create a safety plan for a location, then create a work order for a location that was not associated to the safety plan, the safety plan is not referenced on the work order.

APAR: IZ82938

Issue(s): 10-17170

Application: Work Order

Description: When a work order record is approved, the status is not checked and inventory reservations are created. If multiple requests are made by work order, the values on the quantity reserved or quantity available fields are incorrectly calculated.

APAR: IZ83473

Issue(s): 10-17513

Application: Work Order

Description: If you hyperlink to a company, the company that belongs to the wrong organization is brought up.

APAR: IZ72680

ISSUE: 10-11718

Application: Work Order Generation

Description: If you reach the trigger point for the PM and you enter a
meter reading, the work order is not generated and the Units to go field
on the PM displays a negative value.

APAR: IZ74683

Issue(s): 10-12767

Application: Work Order Generation

Description: If you use the 'Generate Work 'menu action on the PM
application to generate work orders from large PM sets,
an out of memory error occurs.

The following issues were resolved for Maximo Asset Management v6.2.6

APAR: IZ66545

ISSUE: 09-22895

Application: Actions

Description: If you use Application Designer to insert an action in the
Actions application, set the object to WORKORDER, and add Chinese
characters to the action setvalue, the Chinese characters in workflow
actions are not displayed.

APAR: IZ51656

ISSUE: 09-14325

Application: All

Description: If you change the status of one incident record, the status
of all incident records is also changed.

APAR: IZ54649

ISSUE: 09-15859

Application: Application Designer

Description: In Application Designer, if you set the wonum field input
mode to read-only for the Quick Reporting application, the software also
sets the long description to read-only as default.

APAR: IZ59233

ISSUE: 09-17536

Application: Application Designer

Description: If you insert an external URL hyperlink for a work order and some related records, the hyperlink is not launched from a child work order.

APAR: IZ65000

ISSUE: 09-21922

Application: Application Designer

Description: In the Work Order Tracking application, if you do an advanced search and select a classification, the classification drop-down is not expanded by default.

APAR: IZ65331

ISSUE: 09-22044

Application: Application Designer

Description: In the Labor Reporting application, when you specify new By Labor rows, the form moves off the screen, and you cannot access the OK button if you do not reposition the form.

APAR: IZ65467

ISSUE: 09-22205

Application: Application Designer

Description: If you use Maximo Asset Management 6.2.3 with Maximo Asset Management for Transportation 6.2.3, the Application Restriction within the Campaigns (Tr) application does not work.

APAR: IZ67261

ISSUE: 09-23137

Application: Application Designer

Description: In the Spell Checker window, you cannot increase the width of the Suggestions text box.

APAR: IZ70140

ISSUE: 10-10977

Application: Assets

Description: After a maintenance work order is completed, and the work order has labor and materials for the asset, no cost accumulates on asset.

APAR: IZ54263

ISSUE: 09-15625

Application: Assets

Description: If you move asset parents in specific patterns and generate
work orders, the software might go into a loop and throw ORA-1000:
Maximum open cursors exceeded error.

APAR: IZ57376

ISSUE: 09-16857

Application: Assets

Description: In the Locations application, when you choose the Duplicate
Location action, and a sameas relationship is missing on the
non-persistent Locations.Parent attribute, the following error message
is displayed: "The value specified XXXXXXXXXXXXXXXXXX exceeds the
maximum field length."

APAR: IZ58743

ISSUE: 09-17272

Application: Assets

Description: If you add a classification that has no attributes attached
to an asset and then try to add an attribute to the classification, the
software does not update the classification with the attribute.

APAR: IZ59576

ISSUE: 09-17748

Application: Assets

Description: If you move an asset to one site and return it to the
original site within an organization, the updated data is lost.

APAR: IZ60815

ISSUE: 09-18711

Application: Assets

Description: When you move a parent asset rotating item to a storeroom,
the software increases the balance of the child asset rotating item.

APAR: IZ61463

ISSUE: 09-18944

Application: Assets

Description: The lookup on the New Itemnum attribute in the Change
Itemnum action/window does not have an option for Tools and Stocked
Tools.

APAR: IZ61853

ISSUE: 09-19195

Application: Assets

Description: Invalid asset triggers duplicate child change records.

APAR: IZ63205

ISSUE: 09-20508

Application: Assets

Description: If you move an asset that has no meter attached and then
attach a meter to the asset, you cannot move the asset again.

APAR: IZ64422

ISSUE: 09-21499

Application: Assets

Description: After you apply a hot fix to correct issue 09-18711 and
move a parent asset back to inventory, the ancestor value of the child
asset becomes null on the asset record.

APAR: IZ66311

ISSUE: 09-22778

Application: Assets

Description: If you add a classification that has no attributes attached
to an asset and then try to add an attribute to the classification, the
software does not update the classification with the attribute.

APAR: IZ66405

ISSUE: 09-22847

Application: Assets

Description: When you change the logfile name for PMWogen cron task,
the change does not take effect until the server is restarted.

APAR: IZ66899

ISSUE: 09-23031

Application: Assets

Description: There are charge store purchase order line items. The
software cannot move asset to inventory type location.

APAR: IZ67316

ISSUE: 09-23177

Application: Assets

Description: If you fully receive a material PO and the related
work order is not closed, the software updates the asset inventory cost.

APAR: IZ67342

ISSUE: 09-23174

Application: Assets

Description: After you specify two meter readings for an asset, you
receive an average for the ASSETMETER.AVERAGE field. However, if you
change the reading history of the second reading, the
ASSETMETER.AVERAGE field is not updated for this change.

APAR: IZ69602

ISSUE: 10-10811

Application: Assets

Description: In the Master Preventive Maintenance application, if you
try to propagate the updates that you made on a master PM to the
related PMs, the application removes the meter frequency-based
values of the related PMs.

APAR: IZ69739

ISSUE: 10-10842

Application: Assets

Description: When you specify a backdated meter reading on an asset
meter that has a rollover value that is greater than zero, the delta
meter reading value is not updated correctly.

APAR: IZ63112

ISSUE: 09-20260

Application: Assignment Manager

Description: Using the default profile set to US/Mexico time zone 2, if you create a calendar that has a shift from 6 AM – 2 PM and associate a labor with this shift, you can assign a work order to the labor in Assignment Manager. However, the schedule start that the application displays is incorrect.

APAR: IZ63136

ISSUE: 09-20267

Application: Bulletin Board

Description: After you apply Maximo Asset Management 6.2.3 hot fix 025, you cannot save a newly created bulletin message record. A "not a valid value" error message is displayed.

APAR: IZ65938

ISSUE: 09-22611

Application: Bulletin Board

Description: If you use the Enter key on a bulletin message, save the message, and then expand the message title in the Bulletin Board from the Start Center portal, the message displays a <BR> tag and the line does not break.

APAR: IZ55829

ISSUE: 09-16407

Application: Changes

Description: If you apply the Move/Modify Asset action to an asset, and go to the Move tab to add a row and associate an asset with the row, the tab does not display the changes until you save them.

APAR: IZ58928

ISSUE: 09-17336

Application: Changes

Description: After you create a change record and use the Select Value button of the Vendor field, you should retrieve only the vendors for the organization that belongs to your default insert site.

APAR: IZ61123

ISSUE: 09-18788

Application: Changes

Description: On a new change record, if you choose a location from an organization and select a vendor from another location, you can choose values only from the organization that you selected for the vendor.

APAR: IZ37094

ISSUE: 08-24332

Application: Chart of Accounts

Description: If you use Application Designer to edit GLMAINT in the Chart of Accounts application, the screen locks up.

APAR: IZ62248

ISSUE: 09-19336

Application: Chart of Accounts

Description: After you apply hot fix 04 for Maximo Asset Management 6.2.2, the GL navigator lookup in the Report Administration application does not work for your custom report.

APAR: IZ68244

ISSUE: 10-10459

Application: Chart of Accounts

Description: After you add resource groups to Chart of Accounts, run the Update Database action using any of the three options available for this action, the software locks up.

APAR: IZ59122

ISSUE: 09-17476

Application: Classifications

Description: When you reclassify an asset, the software changes only the first specification attribute.

APAR: IZ59539

ISSUE: 09-17750

Application: Classifications

Description: On a new classification record, in the Attribute section, when you add the fourth new attribute, you can specify the attribute

name and description. However, you cannot specify the data type because
the applicable field becomes read-only.

APAR: IZ65324

ISSUE: 09-22062

Application: Classifications

Description: If you specify a description for a classification record
and save the record, the field for the classification description
becomes blank.

APAR: IZ65793

ISSUE: 09-22505

Application: Classifications

Description: You cannot use a space as delimiter for classifications

---

APAR: IZ66176

ISSUE: 09-22717

Application: Classifications

Description: On a new classification record, in the Attributes section,
if you add a row, select an attribute that contains a description, the
description is copied to the row. However, after you save the record,
the description is no longer displayed.

APAR: IZ68469

ISSUE: 10-10543

Application: Classifications

Description: When you are signed in to Maximo using a locale other than
en_US, and select a classification in the Assets application, the
classification attributes are not displayed.

APAR: IZ68489

ISSUE: 10-10549

Application: Classifications

Description: If you select Edit History Work Order for a closed
work order record, the Classification field is still read-only.

APAR: IZ68614

ISSUE: 10-10577

Application: Classifications

Description: On an asset record, classification is used as a description.

APAR: IZ69794

ISSUE: 10-10884

Application: Condition Monitoring

Description: Even if work orders are in canceled or closed status, you cannot delete a measure point from which the work orders were generated.

ISSUE: 09-19699

Application: Configuration

Description: If you change the Maximo database configuration using Maximo Enterprise Adapter, the processing for MXOBJECTCFG fails because all views are recreated.

APAR: IZ65470

ISSUE: 09-22234

Application: Cost Management

Description: If you specify the project ID and task ID for a work order and submit a requisition for the work order, the fields for project ID and task ID are null in the Purchase Requisitions application, on the PR Lines tab.

APAR: IZ63830

ISSUE: 09-20997

Application: Create Requisition

Description: When you are creating a desktop requisition for a service, if the unit cost for a line type of service is higher than 0, the software generates no PR.

APAR: IZ63830

ISSUE: 09-22210

Application: Create Requisition

Description: If you have the same itemnum in multiple storerooms, the incorrect storeroom is populated.

APAR: IZ66348

ISSUE: 09-22803

Application: Create Requisition

Description: You cannot set a default value for line type.

APAR: IZ68578

ISSUE: 10-10551

Application: Create Requisition

Description: If you specify a fractional quantity between -1 and 1, you must specify it before you add an item to your requisition.

APAR: IZ66707

ISSUE: 09-22963

Application: Desktop Requisitions

Description: On a new desktop requisition, if a service line has null quantity, you cannot create a PR.

APAR: IZ58778

ISSUE: 09-17275

Application: Desktop Requisitions

Description: After you change a work order from a desktop requisition draft and submit the work order, the reservation is made on the original work order instead of the changed work order.

APAR: IZ62948

ISSUE: 09-19958

Application: Doclink Browser

Description: When you start the process to add an attachment as New Web page and decide to process, the attachment is stored by mistake.

APAR: IZ67538

ISSUE: 10-10086

Application: Electronic Signature

Description: In Maximo 6.2.2 for Nuclear Power, if e-signature is not

enabled, e-audit is not turned on.

APAR: IZ60732

ISSUE: 09-18658

Application: Electronic Signature

Description: When MAXIMO.MAXSESSIONSEQ counter value reaches 100000 and the login tracking is enabled, you cannot log in to Maximo Asset Management.

APAR: IZ62668

ISSUE: 09-19734

Application: Electronic Signature

Description: E-Signature does not update the reason for all records changed on the LOGINTRACKING table in the Database Configuration application.

APAR: IZ56739

ISSUE: 09-16785

Application: E-mail Listener Configuration

Description: If you use the POP3 protocol to run the Email Listener cron task, the software applies the same MAILID to two different email accounts.

APAR: IZ47196

ISSUE: 09-12175

Application: Field Security

Description: The required fields that use Field Control do not work properly.

APAR: IZ69902

ISSUE: 10-10914

Application: Hazards

Description: On the Tag Out tab, when you click the hyperlinks from the Asset and Location fields in the Associated Tag Outs table window on a row, the lookups are opposite.

APAR: IZ70722

ISSUE: 10-11143

Application: Inventory

Description: When you reconcile balances, you cannot specify a shrinkage account for items in the same storeroom.

APAR: IZ70737

ISSUE: 10-11152

Application: Inventory

Description: If you retrieve a record, choose to reorder items from the Select Action menu, disable the run in background mode, and try to run the reorder, an error occurs.

APAR: IZ59815

ISSUE: 09-17928

Application: Inventory

Description: In release 6.2.4, the crossover domain in INVVENDOR does not work.

APAR: IZ59822

ISSUE: 09-17978

Application: Inventory

Description: If you add the MXINVENDORInterface interface to a newly created external system and enable the interface, the Delete action deletes the wrong record and the Replace action does not replace the existing record.

APAR: IZ60283

ISSUE: 09-18266

Application: Inventory

Description: In release 6.2.2., incorrect GL accounts on Inventory transactions page.

APAR: IZ62335

ISSUE: 09-19370

Application: Inventory

Description: On an inventory record, after you set the expiration date

for an item to 2064 and save the record, the software changes the
expiration date to 1964.

APAR: IZ63687

ISSUE: 09-20769

Application: Inventory

Description: After you disallow negative balances, the software applies
a negative balance to the current items.

APAR: IZ63840

ISSUE: 09-21000

Application: Inventory

Description: If you apply physical count to items, the physical count
line cost of the item is incorrect on the PCOUNTADJ transaction type.

APAR: IZ64040

ISSUE: 09-21199

Application: Inventory

Description: When you move a rotating asset from an operating location
to a storeroom and view the transaction, there is no record displayed
for the rotating item.

APAR: IZ54528

ISSUE: 09-15765

Application: Invoices

Description: If you use Microsoft SQL Server to run select statements
and then calculate uninvoiced costs for a PO in
Invoice.calculateUnInvoicedTotal(), the execution of the statements is
slow.

APAR: IZ60221

ISSUE: 09-18187

Application: Invoices

Description: After you approve an invoice and then go to the Work Order
Tracking application to retrieve the related work order, the Services
subtab of the Actuals tab does not display the work order task.

APAR: IZ62167

ISSUE: 09-19270

Application: Invoices

Description: You cannot approve an invoice for an approved task work
order because the parent work order is not approved.

APAR: IZ63119

ISSUE: 09-20266

Application: Invoices

Description: If you create an invoice for a PO that has rotating items
and save the invoice, the application throws a null exception.

APAR: IZ64093

ISSUE: 09-21272

Application: Invoices

Description: If invoices for services contain large number of receipts,
they load many servectrans objects and cause out-of-memory error.

APAR: IZ64612

ISSUE: 09-21580

Application: Invoices

Description: If you copy the PO line to a new invoice, and the received
PO contains a tax rate, the software does not copy the tax rate to the
invoice.

APAR: IZ67656

ISSUE: 10-10140

Application: Invoices

Description: When you invoice a PO and the Receipt Required field is not
checked, the Receiving application does not populate the related
servrectrans line on the Receipts tab.

APAR: IZ68188

ISSUE: 10-10418

Application: Invoices

Description: If you use Maximo Enterprise Adapter to export an invoice

that has lines to a flat file, you can edit the last segment of the GL account in the file. However, if you try to import the flat file using Maximo Enterprise Adapter, the error message that is displayed does not specify the line number or the GL account that is causing the problem.

APAR: IZ65655

ISSUE: 09-22397

Application: Invoices

Description: When you receive a purchase order for materials, the received cost does not equal the purchased cost. As a result, reconciliation problems occur.

APAR: IZ69614

ISSUE: 10-10814

Application: Issues and Transfers

Description: When the same requisition number is used in two sites, items are reserved.

APAR: IZ70331

ISSUE: 10-11045

Application: Issues and Transfers

Description: If your userid is different from your personid, when you go to the Issues tab of the Issues and Transfers application to try to add a row, the following error message is displayed: "The person does not exist or is not active."

APAR: IZ53663

ISSUE: 09-15309

Application: Issues and Transfers

Description: When you add failure reports to a work order, an implementation or customization error occurs.

APAR: IZ61464

ISSUE: 09-18938

Application: Issues and Transfers

Description: The application transfers wrong quantities.

APAR: IZ65438

ISSUE: 09-22202

Application: Issues and Transfers

Description: If you try to renumber an asset when you are transferring a
rotating asset, an object read-only error occurs.

APAR: IZ69485

ISSUE: 10-10789

Application: Issues and Transfers

Description: In Maximo Asset Management 6.2.2, if you receive an error
when issuing a transaction to an external system, the transaction
is not rolled back.

APAR: IZ65448

ISSUE: 09-22204

Application: Issues and Transfers

Description: When you return task work orders from the Select Reserved
Items window, the material reservations for these work orders are
incorrectly displayed in the user interface.

APAR: IZ62616

ISSUE: 09-19657

Application: Issues and Transfers

Description: Issues and Transfers mbo does not work consistently with
external system interface.

APAR: IZ37845

ISSUE: 08-24760

Application: IPC Administration

Description: If you use Maximo Asset Management add-ons and run the
Maximo upload utility of Maximo Asset Navigator, the utility is not
connected to the Maximo application server.

APAR: IZ58003

ISSUE: 09-17083

Application: Item Master

Description: If the item description that you specify exceeds 50 characters and the item is rotating, the Meter Group field becomes editable.

APAR: IZ60058

ISSUE: 09-18107

Application: Item Master

Description: When you select delete row for an item on the Item Master Storeroom tab, and the current balance is higher than 0, you can delete the item.

APAR: IZ63963

ISSUE: 09-21139

Application: Item Master

Description: When you try to classify a rotating item that has over 7,000 assets associated with it, an out-of-memory error occurs.

APAR: IZ61297

ISSUE: 09-18874

Application: Item Master

Description: After you duplicate an item in Item Master (TR) application, the description itemspec set does not update the original itemspec set.

APAR: IZ63963

ISSUE: 09-21139

Application: Item Master

Description: If the amount of associated rotating items is large, the application locks up while you are trying to change the specifications.

APAR: IZ66644

ISSUE: 09-22940

Application: Job Plans

Description: On a job plan record, if you add a new material, specify an item that has a default vendor, tab out, and save the record, the Vendor field is read-only and is not populated with the applicable value.

APAR: IZ63175

ISSUE: 09-20391

Application: KPI Manager

Description: If you add a new column to the KPIMAIN object, run ConfigDB, install Maximo Asset Management fix pack 6.2.5, and then run updatedb, the installer returns an error.

APAR: IZ68013

ISSUE: 10-10247

Application: KPI Manager

Description: You cannot create KPIs in Maximo Asset Management 6.2.5.

APAR: IZ68052

ISSUE: 10-10275

Application: KPI Manager

Description: You cannot create KPIs in Maximo Asset Management 6.2.5.

APAR: IZ55243

ISSUE: 09-16076

Application: Labor

Description: When the software receives inbound labor transactions with an action of add/change, the software ignores the changes for the person record and the following error message is displayed: "Cannot delete this person because this person is named on a labor record."

APAR: IZ62086

ISSUE: 09-19260

Application: Labor

Description: When the result set has many records, an issue in the LABORCRAFTRATE appValidate method causes low processing performance.

APAR: IZ63095

ISSUE: 09-20259

Application: Labor

Description: In the Work Order Tracking application, on an approved work order, the security restrictions do not work for the select labor option.

APAR: IZ68109

ISSUE: 10-10321

Application: Labor

Description: If you retrieve a craft result set and try to change the status of all the related labor records, you receive a message of change status confirmation. However, the status of each record remains unchanged.

APAR: IZ68345

ISSUE: 10-10497

Application: Labor

Description: If you renew a qualification for a labor, the software sets the expiry date to null.

APAR: IZ62756

ISSUE: 09-19842

Application: Labor Reporting

Description: If you create a domain to control regular hours in the Work Order application, and then add a value for regular hours that is higher than 24 on a work order record, the "Regular hours XX is not valid" message is not displayed.

APAR: IZ63947

ISSUE: 09-21135

Application: Labor Reporting

Description: You can load non-work labor transactions with an associated work order into Maximo by using Maximo Enterprise Adapter.

APAR: IZ59578

ISSUE: 09-17751

Application: Lease and Rental Contracts

Description: On a contract record that has at least 200 invoices, if you run the Select Revise Contract action, add your memo in the resulting window, the software locks up.

APAR: IZ60829

ISSUE: 09-18720

Application: Lease and Rental Contracts

Description: When you try to import contractassets to a lease contract
that has many assets associated with it, the product performance becomes
slow.

APAR: IZ57378

ISSUE: 09-16860

Application: Locations

Description: When you create a location record and try to associate it
with a system before you save the record, an error occurs.

APAR: IZ57609

ISSUE: 09-16949

Application: Locations

Description: If you create a storeroom location record by using
Maximo Enterprise Adapter for Oracle Applications 11i, an error is found
because of a null value that is retrieved for the Loctype of the record.

APAR: IZ59114

ISSUE: 09-17426

Application: Locations

Description: When you try to change the status of multiple records all
at once, only the status of the first record is changed.

APAR: IZ66811

ISSUE: 09-22997

Application: Locations

Description: If you create a location on site 2 with the same name as
the one for a location on site 1, and then assign one or more persons
to the location on site 1, the application prevents you from deleting
the location on site 2.

APAR: IZ69045

ISSUE: 10-10689

Application: Locations

Description: If you use Database Configuration to change the default value of the locations status to "Not ready," the Locations application is not updated for this change.

APAR: IZ65477

ISSUE: 09-22274

Application: Master Contracts

Description: If the end date of a master contract is greater than 2049, you cannot associate contracts with the master contract.

APAR: IZ56173

ISSUE: 09-16533

Application: Maximo Enterprise Adapter

Description: If you use Maximo Enterprise Adapter to import warranty assets to a warranty contract, and the contract already has many associated assets, the software performance becomes slow.

APAR: IZ59241

ISSUE: 09-17549

Application: Maximo Enterprise Adapter

Description: After you upgrade the software to release 6.2.4, you can receive a purchase order in the Receipts application. However, the software does not populate WONUM and TASKID fields in the Maximo Enterprise Adapter mxgltxn_iface.

APAR: IZ62737

ISSUE: 09-19819

Application: Maximo Enterprise Adapter

Description: Each time you change the database, the object structure is changed and you have to sort the order in which Maximo Enterprise Adapter writes the elements to XSD or XML.

APAR: IZ65319

ISSUE: 09-22042

Application: Organizations

Description: When you try to filter on the description on-site based options, the application does not filter and generates an error in the log file.

APAR: IZ65641

ISSUE: 09-22387

Application: Organizations

Description: After you apply hot fix 026 for Maximo Asset Management 6.2.4, if you do not have a default insert site and try to create a PO, no message is displayed to warn you that a default insert site is needed.

APAR: IZ65642

ISSUE: 09-22389

Application: Organizations

Description: After you apply hot fix 026 for Maximo Asset Management 6.2.4, if a user does not havea default insert site when he tries to create a PR, no warning message is displayed to warn that a default insert site is needed.

APAR: IZ62611

ISSUE: 09-19622

Application: Person Groups

Description: After you filter for a user site to which the group default does not belong and add a new member of the group, the following error message is displayed: "There must be at least one group default for any group with team members."

APAR: IZ14441

ISSUE: 08-11703

Application: Preventive Maintenance

Description: On the Job Plan Sequence tab, the description fields tab for equipment, location, and job plan fields can be edited.

APAR: IZ59683

ISSUE: 09-17857

Application: Preventive Maintenance

Description: When you try to set the meter reading of an existing work order using the "Set Reading at Last Work Order" action, the entire new reading value is added to the number of "Units to go."

APAR: IZ62595

ISSUE: 09-19619

Application: Preventive Maintenance

Description: If you generate a work order from a PM that has a job plan, and the job plan has a work group, the work order inherits the workgroup of the PM job plan. However, the software does not populate the lead and workgroup fields on the PM.

APAR: IZ64955

ISSUE: 09-21830

Application: Preventive Maintenance

Description: When you try to set the meter reading of an existing work order using the "Set Reading at Last Work Order" action, the entire new reading value is added to the number of "Units to go".

APAR: IZ65472

ISSUE: 09-22236

Application: Preventive Maintenance

Description: If a PM contains a route that has route stops, and the route stops contain assets or locations that are in "Not ready" status, you can generate work orders from this PM.

APAR: IZ68547

ISSUE: 10-10548

Application: Purchase Contracts

Description: If you create a term and flag it to be editable and add the term to a release PO from a contract, the term cannot be edited.

APAR: IZ56030

ISSUE: 09-16457

Application: Purchase Contracts

Description: If you attach a new document to a newly created purchase contract, approve and revise the contract, the attached document is not displayed in the revised contracted.

APAR: IZ59240

ISSUE: 09-17547

Application: Purchase Contracts

Description: After you install hot fix for issue 09-14892, if you copy over two PR lines that have different sites to a purchase contract, you can use the View PR Line Items action. However, the resulting window does not display all the copied lines for the purchase contract.

APAR: IZ59504

ISSUE: 09-17746

Application: Purchase Contracts

Description: When you create a purchase contract from an RFQ, the software obtains the vendor information from the company record instead of the RFQ.

APAR: IZ63473

ISSUE: 09-20629

Application: Purchase Contracts

Description: If you try to approve a release PO, the software calculates the related service receipt invoice variance incorrectly. As a result, you cannot approve the PO.

APAR: IZ59642

ISSUE: 09-17856

Application: Purchase Orders

Description: On an approved PO record that has partial receipts of one or more PO Lines, you cannot set the PO receipt status to complete and close the PO in the same inbound transaction of Maximo Enterprise Adapter.

APAR: IZ59761

ISSUE: 09-17915

Application: Purchase Orders

Description: You can create POs and PRs in inactive sites.

APAR: IZ61330

ISSUE: 09-18893

Application: Purchase Orders

Description: After an item is changed, the software does not update the PO line total cost.

APAR: IZ62392

ISSUE: 09-19373

Application: Purchase Orders

Description: When you create an internal PO, the software applies the storeroom control account value to the PO credit account.

APAR: IZ62700

ISSUE: 09-19733

Application: Purchase Orders

Description: If you create an RFQ from a PR and then apply the same GL debit account to the related PO and the RFQ, the PO cost still keeps the GL debit account from the PR cost.

APAR: IZ65436

ISSUE: 09-22170

Application: Purchase Orders

Description: If you try to receive ordered services of a PO that has distributed costs, the software creates a receipt and a return for the PO. As a result, the following message is displayed: "A quantity of XXX.X is being received against PO Line 1, which exceeds the order quantity of XXXX.0 by XXX.X."

APAR: IZ66312

ISSUE: 09-22777

Application: Purchase Orders

Description: In the Issues and Transfers application, on the Transfer In tab, when you use the Select PO Item In Transit button to receive the items from a courier, the associated PO and PO line are not updated in the Purchase Orders application.

APAR: IZ67680

ISSUE: 10-10139

Application: Purchase Orders

Description: When you use an internal PO for transferring from one location to another, and the transfer in quantity exceeds the transfer out quantity, the software does not display an error message.

APAR: IZ69807

ISSUE: 10-10872

Application: Purchase Orders

Description: After you create and approve an invoice for a partial
quantity of a service PO, and then try to receive the remaining quantity
of the PO by using the Receiving application, a message is displayed to
warn you that the quantity being received on the PO line exceeds
the total ordered quantity. As a result, the cost amount for the new
received line is incorrect.

APAR: IZ69812

ISSUE: 10-10886

Application: Purchase Orders

Description: If you have no default information, when you apply
hot fix 033 to the product release 6.2.4 and try to create a PO, the
software does not display a message to warn you that you cannot insert
or update a record without a default insert site.

APAR: IZ54334

ISSUE: 09-15690

Application: Purchase Requisitions

Description: When you create a release PO, the software does not copy
terms and conditions from the master contract to the PO.

APAR: IZ55999

ISSUE: 09-16446

Application: Purchase Requisitions

Description: The direct link to the Purchase Contracts application does
not work and returns to the List tab on the Go To Purchase Contracts
link.

APAR: IZ62712

ISSUE: 09-19763

Application: Purchase Requisitions

Description: If you change the RFQ line number, the RFQ link becomes
broken.

APAR: IZ62982

ISSUE: 09-20071

Application: Purchase Requisitions

Description: When you create an internal PR, the software applies the storeroom control account value to the PR credit account.

APAR: IZ63641

ISSUE: 09-20718

Application: Purchase Requisitions

Description: If you duplicate a PR, and the site and organization are different from those applied for the user default site, the PR line of the duplicated PR has the incorrect ORGID.

APAR: IZ64547

ISSUE: 09-21579

Application: Purchase Requisitions

Description: If you create a record, the application still displays the data that you specified for the previous record on the PO Lines tab.

APAR: IZ65667

ISSUE: 09-22508

Application: Purchase Requisitions

Description: When regional settings are French Canadian and you try to cancel a PR that was created by an MR, a database error on MRID occurs.

APAR: IZ67670

ISSUE: 10-10138

Application: Purchase Requisitions

Description: If you change the status of one incident record, the status of all incident records is also changed.

APAR: IZ51208

ISSUE: 09-13959

Application: Receiving

Description: On a service receipt record that contains inspections, when you try to change the status from WINSP to COMP, the software locks up.

APAR: IZ56247

ISSUE: 09-16573

Application: Receiving (Maximo Enterprise Adapter)

Description: When you receive rotating items by using the MXRCVROTITM interface, the software does not update the average cost.

APAR: IZ57483

ISSUE: 09-16885

Application: Receiving

Description: In Maximo Asset Management 6.2.4, if you change the quantity and conversion on receipts, the unit cost is changed.

APAR: IZ59713

ISSUE: 09-17869

Application: Receiving

Description: When you receive and inspect items on a PO, the application creates two transactions: RECEIPT and TRANSFER. As a result, the loaded cost on the TRANSFER transaction is different from the PO total base cost and cost on the RECEIPT transaction.

APAR: IZ60095

ISSUE: 09-18132

Application: Receiving

Description: When you reject the quantity of a PO line while you are changing the inspection status,the prorate cost fields become incorrect on the Matrectrans table.

APAR: IZ60103

ISSUE: 09-18128

Application: Receiving

Description: Single distribution cost PO line displays multiple lines on return.

APAR: IZ60808

ISSUE: 09-18716

Application: Receiving

Description: In the Receiving application, on a PO record, after you select the Ordered Items button, change the PO quantity, and then run your SQL query tool, the exchange rate for some currencies is not correct.

APAR: IZ64793

ISSUE: 09-21725

Application: Receiving

Description: An invoice on receipt that is from a payment schedule is calculated incorrectly.

APAR: IZ65442

ISSUE: 09-22203

Application: Receiving

Description: The actual date on transfer for inspection required items is the same as the actual date of the receipt.

APAR: IZ65706

ISSUE: 09-22509

Application: Receiving

Description: In Maximo Asset Management 6.2.2, the sum of all invoice quantities for invoice INVNUM for line LINENUM of purchase order PONUM exceeds the quantity that was received.

APAR: IZ65744

ISSUE: 09-22511

Application: Receiving

Description: If the ItemSetID of your default insert site is different from the receipt item ItemSetID, you cannot receive direct issue items.

APAR: IZ66114

ISSUE: 09-22681

Application: Receiving

Description: if you return the entire quantity of PO ordered items, the software returns the material items with positive values.

APAR: IZ66473

ISSUE: 09-22889

Application: Receiving

Description: On a record, when you receive a lotted item, specify the shelf life, the application calculates the correct year, for example, 2064. However, after you save the record, the application changes the year to 1964.

APAR: IZ67235

ISSUE: 09-23138

Application: Receiving

Description: If you receive items and prorated services and quantities are negative, the matrectrans record has different prorating details.

APAR: IZ67236

ISSUE: 09-23139

Application: Receiving

Description: When you change the inspection status on the item line that has associated standard service prorated, the prorated cost and loaded cost are nulled out.

APAR: IZ67279

ISSUE: 09-23141

Application: Receiving

Description: The calendar lookup does not work correctly for Default Table Data Date attributes.

APAR: IZ67987

ISSUE: 10-10248

Application: Receiving

Description: Once there is one record of receipt, the software stops counting the invoice in the calculation.

APAR: IZ68490

ISSUE: 10-10530

Application: Receiving

Description: An invoice variance updates matrectrans incorrectly.

APAR: IZ68045

ISSUE: 10-10272

Application: Reorders

Description: In the Inventory application, if you mark items for reorder, a PR and a PO are created. However, if you retrieve the PO created from the reorder and view the PR lines, the PR lines and PO lines do not match.

APAR: IZ63179

ISSUE: 09-20394

Application: Request for Quotations

Description: After you use Application Designer to add a unit cost field to the RFQ Lines tab, you can find the field in the Request for Quotation application. However, if you set the unit cost field to 0.00 for an RFQ line, the software returns a JAVA.LANG.CLASSCASTEXCEPTION error.

APAR: IZ63393

ISSUE: 09-20619

Application: Request for Quotations

Description: If you copy PR lines to an RFQ that has associated terms and conditions, the following message is displayed:
"Attribute SENDTOVENDOR does not exist."

APAR: IZ64611

ISSUE: 09-21576

Application: Roles

Description: When you create a role of type PERSONGROUP, you cannot manually specify OWNERGROUP as the value.

APAR: IZ68743

ISSUE: 10-10624

Application: Reporting - Actuate

Description: Work order details report shows date 2030 as 1930.

APAR: IZ55523

ISSUE: 09-16239

Application: Reporting - Actuate

Description: When you run an Actuate report, the long description formatting is not kept.

APAR: IZ59856

ISSUE: 09-18104

Application: Reporting - Actuate

Description: When some users run Direct Print, a login failed error is thrown in the Maximo logs. When users exceed the amount of failed login attempts, their account is locked.

APAR: IZ61801

ISSUE: 09-19105

Application: Reporting - Actuate

Description: Asset cost rollup report does not post material charges.

APAR: IZ63759

ISSUE: 09-20908

Application: Reporting - Actuate

Description: You cannot print PR details using the Direct Print function.

APAR: IZ66142

ISSUE: 09-22687

Application: Reporting - Actuate

Description: Work order details report calculates actual labor page totals incorrectly.

APAR: IZ58769

ISSUE: 09-17274

Application: Reporting - Actuate Reports

Description: After you install hot fix dated 12/11/08 in Maximo 6.2.1 and upgrade from Oracle 10.2.0.3 to 10.2.0.4, the special characters that are in the Long Description field render incorrectly in reports.

APAR: IZ69797

ISSUE: 10-10883

Application: Reporting - Administration

Description: If you do not select records before direct print, an out of
memory error occurs.

APAR: IZ59142

ISSUE: 09-17475

Application: Reporting - Administration

Description: If additional synonym domain values are added for the
domainid TKCLASS and maxvalue of incident, service request, or problem,
then an error is thrown by the ticket details report when run from either
of the applications.

APAR: IZ60218

ISSUE: 09-18183

Application: Reporting - Administration

Description: When a report has a required or a non-required parameter on
the request page, the report should not run from the direct print icon.
The report still runs from the icon only when the flag "required" is
removed from Maximo Report Admin.

APAR: IZ61682

ISSUE: 09-19025

Application: Reporting - Administration

Description: In the Database Configuration application, if you try to
run a report that has override label values as a secondary language user,
the Report lookup field on the report request page does not display the
correct override label values of the report until you restart Maximo.

APAR: IZ61868

ISSUE: 09-19196

Application: Reporting - Administration

Description: If you select work order details report from the application
toolbar for direct printing and the auto-print function starts, the PDF
output is not updated for the changed report labels.

APAR: IZ65541

ISSUE: 09-22271

Application: Reporting - Administration

Description: Asset cost rollup report is not rolling up in the
Matusetrans from 0->1.

APAR: IZ65524

ISSUE: 09-22275

Application: Reporting - Administration

Description: In the Incident (Oil) application, the Incident List and
Incident Details reports return "No pages to display".

APAR: IZ59132

ISSUE: 09-17473

Application: Search Solutions

Description: There is a default WHERE clause that creates an unwanted
filter on the records.

APAR: IZ61503

ISSUE: 09-18956

Application: Service Request

Description: If you create a synonym for the internal status Resolved and
try to use this synonym to set the status of an incident, the status is
displayed as Resolved in the Service Request application and not as the
synonym.

APAR: IZ64831

ISSUE: 09-21723

Application: Service Request

Description: On a new service request record, after you select a GL
account value from the value lookup, the following error message is
displayed: "BMXAA4198E - Organization needed for GL attribute GLACCOUNT
on object 1."

APAR: IZ65330

ISSUE: 09-22064

Application: Service Request

Description: On a new service request record, if you specify a classification that is not used in other tickets, and then take ownership of the service ticket and show similar tickets, the Service Requests application locks up.

APAR: IZ66586

ISSUE: 09-22915

Application: Service Request

Description: When you create a service request and try to add an asset under the related assets section, the following error message is displayed: "Location XXXX is not a valid location.
Only operating, repair, salvage, and vendor locations are valid.
Storeroom, courier and labor locations are not valid."

APAR: IZ59732

ISSUE: 09-17911

Application: Storerooms

Description: The Storerooms application does not display STOREROOM type locations that have different synonyms.

APAR: IZ51163

ISSUE: 09-13912

Application: System - Object

Description: If a database connection reference count reaches a pre-set number, the following warning message is repeatedly displayed: "WARN. Debugging with mxe.db.refcount property is replaced by DbConnectionWatchDog.Please set SqlLogger to DEBUG level to debug connection reference count."

APAR: IZ61805

ISSUE: 09-19110

Application: System - Object

Description: Query contains invalid condition when comparing column name that ends in 1 with a value of 1.

APAR: IZ62252

ISSUE: 09-19330

Application: System - Object

Description: You can attach a document to a closed service request
ticket, but cannot delete a document from the ticket.

APAR: IZ65563

ISSUE: 09-22378

Application: System - Object

Description: In a Maximo Asset Management 6.2.2 environment that has
Maximo Calibration 6.2 installed, if you specify a long description for
a new work order and the description exceeds the maximum field length,
an error occurs. If you click Cancel, the software does not clear
the Long Description field.

APAR: IZ67246

ISSUE: 09-23133

Application: System - Object

Description: The Contact IBM menu, which is on the software Help menu,
must have the Online Support Resources link.

APAR: IZ69612

ISSUE: 10-10812

Application: System - Object

Description: When the TRM rules manager changes the MboSetInfo class,
hashmap errors occur and affect performance on Java virtual machines.

APAR: IZ55831

ISSUE: 09-16415

Application: System - User Interface

Description: Download result set to Excel 2007. Excel 2007 opens as a
recovered document.

APAR: IZ56275

ISSUE: 09-16579

Application: System - User Interface

Description: In any application, if you try to retrieve a saved query
using the query drop-down menu, and the query name contains special
characters, the drop-down menu does not list the query.

APAR: IZ56466

ISSUE: 09-16651

Application: System - User Interface

Description: In an English language database for which the charset is
not AL32UTF8, Spanish users cannot enter back tick.

APAR: IZ58931

ISSUE: 09-17338

Application: System - User Interface

Description: In Maximo Asset Management 6.2.4, Internet Explorer 7
times out with multiple tabs.

APAR: IZ59594

ISSUE: 09-17800

Application: System - User Interface

Description: If you have the locale set to Swedish or other locale that
uses breaking space as a thousands separator, and you use the Download
link to send the data that you retrieved to an .xls file, Swedish numbers
are not recognized as numbers in the file.

APAR: IZ60796

ISSUE: 09-18715

Application: System - User Interface

Description: If you access a cloned application using a profile that has
a secondary language set, the tabs and menu bar items for this cloned
application are not translated into the secondary language.

APAR: IZ62040

ISSUE: 09-19257

Application: System - User Interface

Description: In the advanced search of any application, a problem with
data fields and date lookup occurs.

APAR: IZ63143

ISSUE: 09-20387

Application: System - User Interface

Description: After you apply hot fix 030 to the product release 6.2.3, if you select the Select all check box and clear the check box for the first record, the check box for each record is cleared.

APAR: IZ64033

ISSUE: 09-21197

Application: System - User Interface

Description: If you enable the electronic signature for descriptions in the Domains application, change a domain description, and save the changes, the Electronic Signature window is not displayed.

APAR: IZ66663

ISSUE: 09-22931

Application: System - User Interface

Description: After you deploy the maximo.ear file, log in to the product, and access the Work Order Tracking application, the Web browser takes some minutes to load the application. If you close the browser during application loading and log in to the product again, invalid bindings occur in the application.

APAR: IZ66870

ISSUE: 09-23028

Application: System - User Interface

Description: When you use your SQL tool to update the xcoordinate of a workflow to a value that is greater than 999, the Workflow application does not display the related workflow canvas.

APAR: IZ67154

ISSUE: 09-23103

Application: System - User Interface

Description: In the Calendars application, if you define the 30-day months to have shift hours on Thursday and Friday, and then set the current date to the last day of any 31-day month, the shift hours of the 30-day months are moved to Saturday and Sunday.

APAR: IZ67255

ISSUE: 09-23134

Application: System - User Interface

Description: Java™ pages need IBM licenses.

APAR: IZ67464

ISSUE: 10-10015

Application: System - User Interface

Description: Changes are required to enable the form-based LDAP authentication.

APAR: IZ67743

ISSUE: 10-10174

Application: System - User Interface

Description: After you deploy the maximo.ear file, log in to the product, and open the Work Order Tracking application, the Web browser takes some minutes to load the application. If you close the browser during application loading and log in to the product again, invalid bindings occur in the application.

APAR: IZ63825

ISSUE: 09-21004

Application: Ticket Templates

Description: If you create a ticket template that contains associations with a classification and an activity, and then create a service request, the classification is not taken over to the activity on the service request.

APAR: IZ63746

ISSUE: 09-20910

Application: Tools

Description: When a tool rate is referenced on its rotating asset and the tool rate changes, the Assets application is not updated.

APAR: IZ66398

ISSUE: 09-22845

Application: Updatedb

Description: When you run the V600_516.class script during the product database update from version 6.2 to version 6.2.5, the following error message is displayed: "Cannot insert duplicate key row in object 'dbo.sigoption' with uniqueindex 'sigoption_ndx1'."

APAR: IZ67185

ISSUE: 09-23100

Application: Updatedb

Description: The updatedb.bat script changes the length values of the INVOICECOST.LOCATIONNONPER and LOCATIONS.LOCACTION attributes even if the length values were greater in previous release.

APAR: IZ67534

ISSUE: 10-10079

Application: Updatedb

Description: When you run the V600_680 script file, the following error occurs: "ORA-00001: Unique constraint (MAXUPG.MAXVARS_NDX1)."

APAR: IZ61879

ISSUE: 09-19194

Application: Users

Description: The security groups are not working as independent groups.

APAR: IZ63092

ISSUE: 09-20256

Application: Warranty Contracts

Description: On the Associated Assets tab, when you try to view a contract, the following error message is displayed: "A relationship called VIEWCONTINPUT does not exist for the WARRENTYASSET business object."

APAR: IZ66309

ISSUE: 09-22770

Application: Warranty Contracts

Description: On a warranty contract record, if you select Go to Assets from asset detail, select an asset whose site is different from the site of the contract, you are not prevented from returning with this asset value to the Warranty Contracts application.

APAR: IZ70138

ISSUE: 10-10978

Application: Workflow

Description: The Route Workflow menu item does not work when selected from Select Action.

APAR: IZ58883

ISSUE: 09-17284

Application: Workflow

Description: If you change the status of a workflow process on a work order while running your asset management software on a DB2 or SQL Server database, and the workflow process uses the NOSTATUS and ONNOSTATUS actions, the software becomes unresponsive.

APAR: IZ63681

ISSUE: 09-20770

Application: Workflow

Description: When you open the Workflow Administration application, you see an error on the console: INCORRECT SYNTAX NEAR ','

APAR: IZ64811

ISSUE: 09-21727

Application: Workflow Designer

Description: The Workflow toolbar icon does not work as expected.

APAR: IZ56650

ISSUE: 09-16729

Application: Workflow Designer

Description: When you reassign a work order by using the workflow, you can update a user display name on the person table. This might cause users to use this function inappropriately.

APAR: IZ62811

ISSUE: 09-19897

Application: Work Order Tracking

Description: On the Plans tab, under the Labor section, if you add a new task, use the select value that is next to task, and the select the task, the Task field is not populated for labor.

APAR: IZ66766

ISSUE: 09-22973

Application: Work Order Tracking

Description: In the Preventive Maintenance application, after you run a query and use the Generate Work Orders window to generate work orders from PMs, an "ORA-01000: maximum open cursors exceeded" error occurs.

APAR: IZ07115

ISSUE: 07-27273

Application: Work Order Tracking

Description: When you try to create a task for a task order, the "Record has been updated by another user. The "Refetch and try again" error message is displayed and the record is not saved.

APAR: IZ55415

ISSUE: 09-16193

Application: Work Order Tracking

Description: In the advanced search, a performance problem for assigned labor occurs.

APAR: IZ55677

ISSUE: 09-16322

Application: Work Order Tracking

Description: After you apply hot fix 030 of the product release 6.2.3, the Date and Time field for work order actuals does not display the time of the local user.

APAR: IZ56196

ISSUE: 09-16539

Application: Work Order Tracking

Description: Added doclink property does not work.

APAR: IZ56595

ISSUE: 09-16691

Application: Work Order Tracking

Description: The Services tab displays incorrect unit price.

APAR: IZ60377

ISSUE: 09-18323

Application: Work Order Tracking

Description: You cannot change the value for regular hours because it is not an independent value from the start and end time and is automatically calculated.

APAR: IZ60370

ISSUE: 09-18329

Application: Work Order Tracking

Description: On an active job plan that has tasks, if you attach a document to an operating asset, set the software to copy link to work order for that document, and then create a work order for the asset and the job plan, the software attaches the document to each job plan task.

APAR: IZ62293

ISSUE: 09-19337

Application: Work Order Tracking

Description: You cannot close a task that has a material on a purchase order.

APAR: IZ62684

ISSUE: 09-19738

Application: Work Order Tracking

Description: Crossover domain overrides 'Go To <app>' WHERE clause set in the attribute's field class. This is evident when attempting a cross-site "Go To Job Plans" from the Work Order Tracking application. Problem also occurs anywhere the 'from' application main object is SITE-level, and the 'to' application main object is SYSTEMORGSITE-level.

APAR: IZ63303

ISSUE: 09-20505

Application: Work Order Tracking

Description: The Location and Asset fields cannot be edited on the Actuals tab for a child work order. However, at line level, the fields can be edited.

APAR: IZ65454

ISSUE: 09-22206

Application: Work Order Tracking

Description: When you add a job plan to a parent work order, the following error message is displayed: "Cannot copy job plan XXXXXXX. Task XX is used by another task."

APAR: IZ65540

ISSUE: 09-22273

Application: Work Order Tracking

Description: If you belong to a security group that has rights to only change status in the Work Order Tracking application, you cannot view the synonym status values for WAPPR in the product release 6.2.4.

APAR: IZ66378

ISSUE: 09-22804

Application: Work Order Tracking

Description: On a work order, if you specify the parent asset to be the same as the asset, you cannot change the work order status to complete.

APAR: IZ66444

ISSUE: 09-22846

Application: Work Order Tracking

Description: In either Work Order Tracking or Quick Reporting, when you specify a Failure Remark, the product always sets Remark Date to the current date and time as default.

APAR: IZ66928

ISSUE: 09-23038

Application: Work Order Tracking

Description: On a work order record, if you open the detail menu drilldown from the Asset field, the software displays only one asset.

APAR: IZ67476

ISSUE: 10-10032

Application: Work Order Tracking

Description: If you assign labors to work order tasks and try to filter the labor names by specifying chained data source names, an error occurs.

APAR: IZ67951

ISSUE: 10-10238

Application: Work Order Tracking

Description: If you delete planned labor and use more than four decimal places in the ESTLABHRS value, the application does not update the ESTLABHRS value to zero.

APAR: IZ70180

ISSUE: 10-10976

Application: Work Order Tracking

Description: In the Work Order Tracking application, you can change the description of the tools that are associated with a work order.

The following issues were resolved for Maximo Asset Management v6.2.5

APAR: IZ44294

ISSUE: 09-11267

Application: Activities

Description: When you are creating communication from many applications, if there is a large set of data for people, person groups, or roles, and you are selecting recipients, the system performance becomes slow.

APAR: IZ48601

ISSUE: 09-12800

Application: Application Designer

Description: In the Asset application, if you set the properties of the "Asset" field on the Asset tab to "read-only," the Long Description window is also set to read-only.

APAR: IZ51617

ISSUE: 09-14154

Application: Application Designer

Description: In the Work Order Tracking application, you can no longer use an href link to go from a record to another in the Work Order tab.

APAR: IZ53743

ISSUE: 09-15355

Application: Application Designer

Description: If you are using Internet Explorer 7, some of the panels from the Search More screen are not correctly displayed in Application Designer.

APAR: IZ48412

ISSUE: 09-12715

Application: Asset Catalog

Description: In the Security Groups application, if you enter a WHERE clause on the Restrictions tab to prevent a group of users from accessing an item, a user from that group can search the item using the Classification Search.

APAR: IZ43013

ISSUE: 09-10704

Application: Assets

Description: Report downtime in the Work Order application saves double entry in the Asset application Total Downtime field.

APAR: IZ48219

ISSUE: 09-12626

Application: Assets

Description: If you move a parent asset, the asset is moved, but its child assets are disassociated from it.

APAR: IZ50659

ISSUE: 09-13642

Application: Assets

Description: If you create an asset, duplicate it, and set the location and serial number of the original asset for the duplicated asset, the

following message is displayed: "BMXAA2660E - Storeroom XXXX is not a valid inventory location."

APAR: IZ52825

ISSUE: 09-14810

Application: Assets

Description: In the Work Order application, when you modify the numeric attribute of an asset using the Specifications tab of the Move/Modify Attribute option of the Select Action menu, the value is not changed in the Assets application.

APAR: IZ53560

ISSUE: 09-15250

Application: Assets

Description: In the Work Order Tracking application, when you try to create a downtime report for an asset with a 24-hour shift on the calendar, the downtime hours are not correctly calculated.

APAR: IZ54263

ISSUE: 09-15625

Application: Assets

Description: If you move asset parents in specific patterns, an apparent loop in the assettrans data might be created. The assettrans data is used by getWarrantyInfo to reconstruct the asset hierarchy as of a specific date.

APAR: IZ54539

ISSUE: 09-15770

Application: Assets

Description: If a location is used in two different sites with the same name and you try to classify this location as a parent in a hierarchy on both sites, the following message is displayed: "A location cannot be its own parent."

APAR: IZ54828

ISSUE: 09-15947

Application: Assets

Description: You cannot change attributes by choosing Move/Modify Assets from the Select Action menu.

APAR: IZ55840

ISSUE: 09-16410

Application: Assets

Description: On a new asset or location meter, when you change the meter
name from a continuous or gauge to a characteristic meter, the
MeasureUnitId attribute is not cleared, but it becomes read-only.

APAR: IZ56675

ISSUE: 09-16730

Application: Assets

Description: After the parent asset is moved to a different location,
the child assets lose the relationship to the parent asset. The parent
field of the child assets becomes null.

APAR: IZ43652

ISSUE: 09-10944

Application: Chart of Account

Description: If you select some GL components using the Select Action
menu and disable them, return to the Maintenance screen, and enable them
again, the -9999 error occurs.

APAR: IZ43810

ISSUE: 09-11010

Application: Classification Catalog

Description: If you create an asset by duplicating another asset,
the Specification tab numeric value is populated with trailing zeros.

APAR: IZ44928

ISSUE: 09-11539

Application: Classification Catalog

Description: In the Classifications application, if you search on
Classification Path, the application does not return correct list.

APAR: IZ45538

ISSUE: 09-11789

Application: Classification Catalog

Description: If you create a classification with a non-numeric
CLASSSTRUCTUREID and do a Location Classification Search, the
classification value is not displayed.

APAR: IZ46836

ISSUE: 09-12053

Application: Classification Catalog

Description: When you select the attribute for a new ClassStructure
record and type an OrgID/Site ID for an existing AssetAttribute record
that did not have this field populated, a new AssetAttribute record is
inserted with the OrgID/SiteID populated.

APAR: IZ48196

ISSUE: 09-12625

Application: Classification Catalog

Description: Maximo Enterprise Adapter does not consistently take data
delivered using a Web service and build an asset description in the order
that is defined in the Classification application.

APAR: IZ49443

ISSUE: 09-13029

Application: Classification Catalog

Description: When you try to delete a classification that is not being
used, the following error message is displayed: "The classification
cannot be deleted. It is being actively being used."

APAR: IZ50035

ISSUE: 09-13348

Application: Classification Catalog

Description: In the Classifications application, after you retrieve any
record from the system and try to add an attribute that does not exist
from the Children table window, a message is displayed to warn you that
the attribute is not valid. If you clear the invalid attribute and press
Enter to obtain a list of valid attributes, the following error message
is displayed: "Please enter correct values for attributes."

APAR: IZ50051

ISSUE: 09-13353

Application: Classification Catalog

Description: In the Tools application, if you select a tool ID that has the Rotating flag checked, assign a classification table, and save the record, the following error message is displayed: "BMXAA4210E - Database error number 2601 has occurred. QADB02 cannot insert duplicate key row in object 'dbo.assetspechist' with unique index 'assetspechist_ndx2'."

APAR: IZ52243

ISSUE: 09-14430

Application: Classification Catalog

Description: In the Classifications application, when you try to add an attribute to a classification that is already active and is used by an item or an asset, the following error message is displayed: "Database error number -180 has occurred. The syntax of the string representation of a date/time value is incorrect."

APAR: IZ53987

ISSUE: 09-15508

Application: Classification Catalog

Description: When there are classstructure IDs that have the same last four digits, the wrong classification is returned.

APAR: IZ59624

ISSUE: 09-17811

Application: Classification Catalog

Description: If you specify 10 as the default numeric value for a classification attribute, the system displays the value with 10 decimals.

APAR: IZ49998

ISSUE: 09-13302

Application: Company

Description: In the Inventory application, if a user is set as primary vendor for one or more items and you try to disqualify this user, you receive an error message instead of a warning message.

APAR: IZ51611

ISSUE: 09-14149

Application: Company

Description: When you disqualify a parent of a branch vendor, the branch vendor also loses its relationships, and no error message is displayed if the branch vendor is the primary vendor for at least one item.

APAR: IZ49999

ISSUE: 09-13305

Application: Configurable Start Center

Description: In the Bulletin Board application, when you use the Enter key to make a bulletin message shorter so that it does not run of screen, the <BR> tag is displayed, and the line does not break.

APAR: IZ52233

ISSUE: 09-14416

Application: Configurable Start Center

Description: If you add a portlet graph from a PM generated work order with timestamp, the portlet graph always displays 12:00 AM as the time.

APAR: IZ52938

ISSUE: 09-14958

Application: Configurable Start Center

Description: After you apply the latest hot fix of version 6.2, the result legend becomes unreadable.

APAR: IZ45449

ISSUE: 09-11744

Application: Configuration

Description: When you are upgrading Maximo from version 5 - 6, the configdb.bat utility cannot change a non-existing column that must be created during the upgrade process. However, the problem does not happen because of a duplicated index name that is found before the database configuration.

APAR: IZ47508

ISSUE: 09-12257

Application: Configuration

Description: In the Database Configuration application, when you navigate through attributes, or try to save a record after adding or changing an attribute, an error occurs.

APAR: IZ47800

ISSUE: 09-12361

Application: Configuration

Description: After the configdb.bat utility finishes installing
Service Request Manager IF0002 with an error, no error message is
isplayed. However, you can find the error message in the log.

APAR: IZ52566

ISSUE: 09-14626

Application: Configuration

Description: In the Preventive Maintenance application, if you add an
attachment to a PM record, update the doclinks relationship by including
some statements, and there is a null value in the union statement that
is inside of the select statement, no SQL is run when you log in to
Maximo again and retrieve the PM record.

APAR: IZ52618

ISSUE: 09-14661

Application: Configuration

Description: If you add an attribute that contains searchtype=TEXT,
delete the attribute, and save the record, you can log off and shut down
the application server. After you wait until one minute and run the
configdb.bat file, an error occurs.

APAR: IZ54251

ISSUE: 09-15602

Application: Create Requisition

Description: In the Desktop Requisition application, if the primary and
default vendors are different for an item, and you clear the Vendor
field, you cannot submit the desktop requisition.

APAR: IZ49405

ISSUE: 09-13028

Application: Desktop Requisitions

Description: The status of a desktop requisition changes to APPR,
instead of remaining WAPPR, when the associated purchase requisition is
canceled.

APAR: IZ50176

ISSUE: 09-13418

Application: Desktop Requisitions

Description: If a desktop requisition contains rotating items and is
associated to a PO, when you receive the PO or close the PO and
invoicing, the desktop requisition status does not change to CLOSE.

APAR: IZ51729

ISSUE: 09-14202

Application: Desktop Requisitions

Description: If a PR Line is associated to an MR Line, and you delete
the PR Line, the MR Line is not updated.

APAR: IZ53846

ISSUE: 09-15401

Application: Desktop Requisitions

Description: If you use Desktop Requisitions to view the PR Lines from a
request previously submitted in the Purchase Requisitions application,
both the project id and task ID fields are shown as null.

APAR: IZ55973

ISSUE: 09-16417

Application: Desktop Requisitions

Description: The system creates item reservations even when the desktop
requisition is not submitted.

APAR: IZ45362

ISSUE: 09-11694

Application: Domains

Description: The RELATETYPE values are missing in MAXDOMAIN.

APAR: IZ48608

ISSUE: 09-12813

Application: Domains

Description: In the Asset application, after you retrieve an asset,
click the Specification tab, type a value in the numeric value field,
and tab out of the field, some numbers are randomly deleted.

APAR: IZ56278

ISSUE: 09-16578

Application: Domains

Description: If you set a location value as the crossover domain in the
Database Configuration application and create a service request, the
location value is not automatically populated.

APAR: IZ42605

Issue: 09-10479

Application: Drilldown

Description: If you open a work order and drill down the associated
asset, the Drilldown window opens on the Location tab, instead of the
Asset tab. In addition, the Location field on the Location tab is blank
and the Asset field on the Asset tab is not populated with the correct
asset number.

APAR: IZ42974

ISSUE: 09-10656

Application: Drilldown

Description: In the Incident application or Service Request application,
if you select the global ticket search from the Global Ticket ID field,
the application returns closed global tickets.

APAR: IZ48596

ISSUE: 09-12770

Application: E-Audit

Description: If you enable an audit for the ContractPurch table in the
Database Configuration, and the table is used in a view, you cannot add
a record in the Purchase Contracts application.

APAR: IZ52948

ISSUE: 09-14955

Application: E-mail Listener

Description: When the length of the Send from e-mail address field of an
inbound communication is longer than the length defined in the COMMLOG

object, an error occurs.

APAR: IZ51291

ISSUE: 09-14029

Application: Failure

Description: When you select a failure code in the Work Order
application, you can change the failure code type.

APAR: IZ45429

ISSUE: 09-11708

Application: Field Security

Description: You cannot create application-specific Field Control records
because of an index violation.

APAR: IZ44148

ISSUE: 09-11180

Application: Hazards

Description: On the Hazards and Precautions subtab, the Related Asset
field displays the wrong asset.

APAR: IZ45298

ISSUE: 09-11640

Application: Inventory

Description: In release 6.2.2, the current balance is not updated
correctly in inventory transaction (INVTRANS) table for reconcile
balance (RECBALDJ) transaction.

APAR: IZ45497

ISSUE: 09-11745

Application: Inventory

Description: In the Inventory application, if you set an item as spare
part of an asset, every time you move the asset, a new row is created in
the Used On section of the Where Used tab.

APAR: IZ46097

ISSUE: 09-11979

Application: Inventory

Description: In the Issues and Transfers application, if you issue a
work order and the associated item, the item is double issued.

APAR: IZ47004

ISSUE: 09-12140

Application: Inventory

Description: The incorrect account is used for issue and return
transactions.

APAR: IZ47268

ISSUE: 09-12184

Application: Inventory

Description: The solution for APAR IZ15475 does not work as expected.

APAR: IZ48109

ISSUE: 09-12581

Application: Inventory

Description: You cannot add and save a remark to the Where Used tab of a
rotating item.

APAR: IZ48546

ISSUE: 09-12760

Application: Inventory

Description: You cannot issue an item to a location that is at a
different site because the Location lookup field is empty.

APAR: IZ48640

ISSUE: 09-12815

Application: Inventory

Description: You cannot change the length of "Modelnum" attribute of
Inventory object using Database Configuration application.

APAR: IZ49868

ISSUE: 09-13264

Application: Inventory

Description: In the Item Master application, if an item is associated to two storerooms and you try to delete a related storeroom that has 0 balance and no open PR or PO records associated, the following message is displayed: "The inventory record is still associated with a purchase requisition. It cannot be deleted."

APAR: IZ50288

ISSUE: 09-13469

Application: Inventory

Description: In the Purchase Order application, the To Lot field is assigned an incorrect lotnum, preventing the inspection status from being changed in the Receiving application when an inspection is required.

APAR: IZ50570

ISSUE: 09-13639

Application: Inventory

Description: In the Inventory application, the last receipt cost of an item with a quantity of one and a conversion rate greater than one is incorrect after an invoice containing the item is approved.

APAR: IZ50660

ISSUE: 09-13641

Application: Inventory

Description: When Maximo Enterprise Adapter uses the MXINVVENDORInterface integration point to update item vendor records that have changes to bid prices or last cost value, an error message warns you that records do not exist. This prevents you from updating the invvendor record.

APAR: IZ51066

ISSUE: 09-13879

Application: Inventory

Description: If an item is issued to a work order from the Inventory application, FINANCIALPERIOD is null in the MATUSETRANS table.

APAR: IZ51188

ISSUE: 09-13953

Application: Inventory

Description: In the Purchase Requisitions application, if you create a PR and add an existing inventory item in the PR Lines tab, the associated manufacturer, model, and catalog number are not automatically populated.

APAR: IZ51171

ISSUE: 09-13954

Application: Inventory

Description: In the Inventory application, when you reorder an item that has been added to multiple storerooms at the same site, the item is not reordered.

APAR: IZ51184

ISSUE: 09-13955

Application: Inventory

Description: If you set the inventory options to create approved POs for internal reorders in the Organizations application, and then reorder multiple items, the system creates multiple PO lines. However, all the costlinenums on pocost.costlinenum have the same values.

APAR: IZ52155

ISSUE: 09-14380

Application: Inventory

Description: When you move the rotating item that is associated with a parent asset to an operating location, the parent asset is moved, but the Inventory application creates incorrect inventory balances. In addition, the rotating item that is associated with the child asset is not moved to the operating location.

APAR: IZ52462

ISSUE: 09-14607

Application: Inventory

Description: When you are saving an inventory with a different locale, if the economic order quantity is between 0 and 0.5, an error occurs.

APAR: IZ52870

ISSUE: 09-14890

Application: Inventory

Description: If you save two assets that share the same number in two
different sites, go to the Where Used tab in the Inventory application,
retrieve a spare part that is associated to the asset in site 1, the tab
shows that the asset is in site 2.

APAR: IZ54569

ISSUE: 09-15780

Application: Inventory

Description: You cannot add and save a remark to the Where Used tab of
a rotating item.

APAR: IZ55830

ISSUE: 09-16416

Application: Inventory

Description: In the Inventory application, when you try to transfer an
item to a bin and or lot that does not have an expiration day using the
'Transfer Current Item' option from the select action menu, the
expiration day is updated to the expiration day from the transfer bin.

APAR: IZ44029

ISSUE: 09-11098

Classification: Invoices

Description: You cannot change the invoice status to PAID when the
conversion factor is used during the receipt.

APAR: IZ44300

ISSUE: 09-11270

Application: Invoices

Description: If you set an invoice tolerance to 0 and assign the invoice
tolerance to a group of users, the users receive an error when they try
to approve invoices.

APAR: IZ44350

ISSUE: 09-11280

Application: Invoices

Description: If a purchase order has two invoices and you approve only
one of the invoices with the PO Close check box selected, the system
closes the purchase order.

APAR: IZ45737

ISSUE: 09-11850

Application: Invoices

Description: If you use "Filter" to get the invoice line that must be updated, and the unit cost of the invoice line is updated, the pretax and invoice totals are not correctly calculated on the Invoice Lines tab.

APAR: IZ48293

ISSUE: 09-12672

Application: Invoices

Description: If the invoice line quantity is greater than the PO line quantity for a material, and the PO line has no receipts, the Invoice application does not save the associated invoice.

APAR: IZ49536

ISSUE: 09-13125

Application: Invoices

Description: If receipts are created from invoices and the Issue To field is blank, the associated invoices that contain a prorated standard service cannot be approved.

APAR: IZ50339

ISSUE: 09-13519

Application: Invoices

Description: You cannot approve an invoice when the quantity of the item received does not match the quantity on the associated purchase order.

APAR: IZ52235

ISSUE: 09-14412

Application: Invoices

Description: When a variance occurs for a partial receipt, no invoice trans type of invoice is generated.

APAR: IZ52983

ISSUE: 09-14969

Application: Invoices

Description: When you are invoicing in a different currency to the purchase order, the service totals are incorrect.

APAR: IZ37845

Issue: 08-24760

Application: IPC Admin

Description: When you run Navigator's Maximo upload utility, the Maximo upload utility does not connect to the Maximo server with add-on applications.

APAR: IZ47332

ISSUE: 09-12210

Application: Issues and Transfers

Description: In the Inventory application, if you create an item with condition codes and associate it to a rotating asset, then issue the item to a work order in the Issues and Transfers application, the item cost for condition code=REPAIR is incorrect.

APAR: IZ47421

ISSUE: 09-12219

Application: Issues and Transfers

Description: After you apply fix pack 6.2.2, the task IDs for work orders are not displayed in the Issues and Transfers application.

APAR: IZ51308

ISSUE: 09-14030

Application: Issues and Transfers

Description: In the Issues and Transfers application, if you receive an error when issuing a transaction to an external system, the transaction is not rolled back.

APAR: IZ53895

ISSUE: 09-15442

Application: Issues and Transfers

Description: In the Inventory application, when you try to issue a rotating asset, the wrong condition code is selected even after you specify the right condition code.

APAR: IZ53924

ISSUE: 09-15463

Application: Issues and Transfers

Description: If you send a MXINVISSUE transaction using XML or interface tables and populate the ISSUETO tag, the data is not written to the matusetrans table.

APAR: IZ56560

ISSUE: 09-16689

Application: Issues and Transfers

Description: When you save the actual material usage on an approved work order while using the Maximo Enterprise Adapter interface tables, the "IFACE#NOITEM" error message is displayed.

APAR: IZ46928

ISSUE: 09-12136

Application: Item Master

Description: You should not be able to set two default vendors in Item Master.

APAR: IZ47996

ISSUE: 09-12437

Application: Item Master

Description: In the Item Master application, attributes disappear from the Specifications tab when a file is imported with a CLASSSTRUCTREID value that matches one already present in Maximo.

APAR: IZ52439

ISSUE: 09-14572

Application: Item Master

Description: If the number of associated rotating items is large, the Item Master application locks up while you are trying to change the specifications.

APAR: IZ52568

ISSUE: 09-14625

Application: Item Master

Description: If you try to add an item that is not in the item set of
the default insert site, the window does not display the default site of
the item that you retrieved. You cannot complete the action.

APAR: IZ53890

ISSUE: 09-15445

Application: Item Master

Description: You cannot transfer a lotted item to another bin in
inventory balance if this item already exists in the new bin even with
a different lotnum.

APAR: IZ53235

ISSUE: 09-15036

Application: Job Plan

Description: If you associate a job plan with a work order, the work o
rder storeroom becomes the default storeroom for the job plan material.

APAR: IZ53944

ISSUE: 09-15502

Application: KPI Manager

Description: The Created Date field does not display the correct
creation date of the KPI.

APAR: IZ50883

ISSUE: 09-13797

Application: Labor

Description: If the work order actuals are associated with a labor
contract, and the labor contract uses a foreign currency, the work order
actuals are not converted into the base currency.

APAR: IZ36536

Issue: 08-23995

Application: Labor Reporting

Description: After you set start and end time for actuals under
work orders, the total time is calculated correctly. After you delete

the total time, which is set to 0.00, the total time is not correctly
calculated.

APAR: IZ42328

Issue: 09-10366

Application: Labor Reporting

Description: In the Labor Reporting application of Maximo Asset
Management 6.2.3, if you insert a row in the Labor field, retrieve an
asset in the Asset field using Open Drilldown, select the asset, and then
click on the blue square icon, no date is returned to populate the Asset
field.

APAR: IZ50032

ISSUE: 09-13349

Application: Labor Reporting

Description: A labor record can be approved and invoiced against a
canceled labor rate contract.

APAR: IZ52417

ISSUE: 09-14553

Application: Labor Reporting

Description: The labor refresh count does not refresh labor entries.

APAR: IZ53490

ISSUE: 09-15192

Application: Labor Reporting

Description: If you enter a contract number after you specify a task ID
that has a different debit account number from the GL account number of
the associated work order, the debit account number is set back to the
work order GL account number.

APAR: IZ44784

ISSUE: 09-11461

Application: Locations

Description: In Application Designer, after you add the CONTROLACC
attribute to the Locations Main screen, the attribute is read-only.

APAR: IZ58266

ISSUE: 09-17125

Application: Locations

Description: In a cloned Locations application, the Return with Value
link does not work.

APAR: IZ58217

ISSUE: 09-17117

Application: Master Contracts

Description: When you use a currency different from US dollars, the
following error message is displayed: "An unknown error has occurred.
Please contact your system administrator for assistance."

APAR: IZ48684

ISSUE: 09-12878

Application: Maximo Enterprise Adapter

Description: When you have connectivity problems, the JMS cron task
generates nullpointer exceptions.

APAR: IZ49784

ISSUE: 09-13241

Application: Maximo Enterprise Adapter

Description: When you create an interface table that includes a CLOB
column, and the CLOB column is not a long description, you receive an
error.

APAR: IZ53477

ISSUE: 09-15196

Application: Maximo Enterprise Adapter

Description: If there are not CLOB data type columns in the interface
tables, and when Maximo Enterprise Adapter tries to write CLOB data into
interface tables, the following error Message is displayed:
"ora-1000 - maximum open cursors exceeded."

APAR: IZ53964

ISSUE: 09-15507

Application: Maximo Enterprise Adapter

Description: When you are using the Web Service of the MXRCVROTITMInterface for the receipt of multiple receipt transactions with asset numbers and serial numbers provided, the following error message is displayed: "Required Field Asset is blank."

APAR: IZ54239

ISSUE: 09-15606

Application: Maximo Enterprise Adapter

Description: When you try to send an inbound or outbound message to the queues and the connection fails, this connection failure is cached in the jms class and the "cannot write transaction to queue" error occurs in the applications server logs for the continuous queues.

APAR: IZ06542

Issue: 07-26810

Application: Move Equipment

Description: In release 5.2 or 5.1, when you move some equipment from site A to site B, the associated safety information is not copied to the new site. If you return the equipment to the original site, the safety information reappears.

APAR: IZ49371

ISSUE: 09-13030

Application: Organizations

Description: In the Hazards application, users can view precautions from sites they do not have access to.

APAR: IZ53558

ISSUE: 09-15253

Application: People

Description: In the People application, you cannot use the Primary Calendar field to query.

APAR: IZ56746

ISSUE: 09-16779

Application: People

Description: You cannot use the advanced search to query a primary shift value.

APAR: IZ51037

ISSUE: 09-13865

Application: Person Groups

Description: When you change the group default person and delete the original default person, the following error message is displayed: "There can only be one group default for any single group."

APAR: IZ52262

ISSUE: 09-14450

Application: Precautions

Description: If you insert a precaution for a new work order after you change the default insert site for a specific user, the system populates the work order precaution table with a precaution site that is different from the default site.

APAR: IZ43712

ISSUE: 09-10941

Application: Preventive Maintenance

Description: The Sliding-Readings and Sliding-Days Average Calculation methods do not work correctly because when the application averages some meter readings, the delta of the first reading in the range is included.

APAR: IZ51198

ISSUE: 09-13960

Application: Preventive Maintenance

Description: If a parent PM record and the child PM records are in the draft status, and you change the status of the parent record to inactive, the child records also become inactive.

APAR: IZ53520

ISSUE: 09-15198

Application: Preventive Maintenance

Description: In a Maximo 6.2.3 PM record, you can edit the "Adjust Next Due Date" field only if you check the "Use Last Target Start Date" and the "Adjust Next Due Date" fields and you do not save the record.

APAR: IZ51730

ISSUE: 09-14201

Application: Purchase Contracts

Description: If you create a purchase contract, sign in to Maximo again
as a different user, and associate the purchase contract with a purchase
requisition, the Entered By field is populated with the user who created
the purchase contract.

APAR: IZ52713

ISSUE: 09-14721

Application: Purchase Contracts

Description: If you install the hot fix for 09-13236, revise a contract,
and the contract end date is greater than the start date, an error is
received.

APAR: IZ52911

ISSUE: 09-14892

Application: Purchase Contracts

Description: If you try to copy multiple PRs to their corresponding
purchase contracts, and the PRs share the same PR number and belong to
two different organizations that share the same company, the PRs are not
correctly copied.

APAR: IZ54922

ISSUE: 09-16012

Application: Purchase Contracts

Description: If you create a contact for a company in more than one
organization, using the same company name but different contact
information, the Purchase Contracts application does not filter
the contacts by orgid in the look up for the Contact field.

APAR: IZ59147

ISSUE: 09-17477

Application: Purchase Contracts

Description: When you send in a transaction using Maximo Enterprise
Adapter, an MXPCINTERFACE transaction using Action=Replace does not
update the descriptions of the existing lines.

APAR: IZ43178

ISSUE: 09-10709

Application: Purchase Orders

Description: In a duplicated purchase order, if you change the PO line
type from material to service and keep the PO line GL debit account that
is used in the original work order, the PO line GL debit account displays
a null value.

APAR: IZ47626

ISSUE: 09-12298

Application: Purchase Orders

Description: If you create a PO, partially receive a PO line, create and
approve an invoice for the PO, the MATRECTRANS.QUANTITY field is
populated with the incorrect value.

APAR: IZ47648

ISSUE: 09-12303

Application: Purchase Orders

Description: If you include a PO line cost of six-digit number in a PO
and distribute the costs, the loaded costs and line cost are not equal.

APAR: IZ47971

ISSUE: 09-12425

Application: Purchase Orders

Description: The Copy PR Lines to PO function does not work on a
database that contains large sets of records.

APAR: IZ48393

ISSUE: 09-12683

Application: Purchase Orders

Description: You cannot set the default value for "Linetype" to any
value other than 'item'.

APAR: IZ50053

ISSUE: 09-13351

Application: Purchase Orders

Description: A problem with cross-site operations causes purchase requisitions to remain closed after you cancel an associated purchase order.

APAR: IZ50044

ISSUE: 09-13352

Application: Purchase Orders

Description: In the Receiving application, the value in the Currency Line Cost field is not transferred to the Received Line Cost field of the corresponding PO Line when a PO Line item requires inspection.

APAR: IZ50263

ISSUE: 09-13466

Application: Purchase Orders

Description: When you mark the GL Debit Account field on PO line as required on the user interface, the field on an approved PO is not displayed as read-only.

APAR: IZ51153

ISSUE: 09-13915

Application: Purchase Orders

Description: When you try to create a PO from a PR that is in local currency, and the PO is associated to a contract in a foreign currency, the following error message is displayed: "The cost on purchase order line 1 is not equally distributed."

APAR: IZ52194

ISSUE: 09-14417

Application: Purchase Orders

Description: When you select an approved PR, and the PR has contract and non-contract lines, the contract lines are not available and not copied from PR to PO.

APAR: IZ52392

ISSUE: 09-14551

Application: Purchase Orders

Description: After you create an integration object as the only MBO, add an integration point processing class to override recurrence, and add a service contract line to a PO, the PO line event starts and writes

the outbound transaction successfully. If you send an inbound transaction, the PO updates the PO line, and the outbound PO line transaction is sent. However, the PO line fails on recurrence override.

APAR: IZ53572

ISSUE: 09-15255

Application: Purchase Orders

Description: You can change the status of approved, received, and invoiced POs to unapproved and set the quantity of the PO lines to a value that is lower than the value that has already been approved.

APAR: IZ54666

ISSUE: 09-15893

Application: Purchase Orders

Description: When you create a PO from an RFQ, the wrong RBNI account is used as a credit account.

APAR: IZ55826

ISSUE: 09-16405

Application: Purchase Orders

Description: If you have the same PONUM in two different sites, you cannot cancel a PO when the vendor has been disqualified in one of the sites.

APAR: IZ56001

ISSUE: 09-16443

Application: Purchase Orders

Description: When you delete a PO line from a PO, and the PO was created from multiple PRs, the system reopens all the PRs. If you do not change the lines from a PR, the system closes those PRs.

APAR: IZ47011

ISSUE: 09-12144

Application: Purchase Requisitions

Description: After you approve a work order that contains two lines, reorder the line related to the PO, the system generates a PR. If you open the PR, which is waiting for approval, and delete line 1 on the PR lines tab, the following error message is displayed: "Work Plan Objects must have an Owner or Work Order."

APAR: IZ47453

ISSUE: 09-12254

Application: Purchase Requisitions

Description: Users who do not have the Approve Purchase Requisitions right in the Signature Security application can approve purchase requisitions.

APAR: IZ48066

ISSUE: 09-12520

Application: Purchase Requisitions

Description: When you add a PR line and change the line type, the system does not clear the long description of a previously added item.

APAR: IZ48065

ISSUE: 09-12523

Application: Purchase Requisitions

Description: When you add a PR line and change the line type, the system does not clear the long description of a previously added item.

APAR: IZ48246

ISSUE: 09-12633

Application: Purchase Requisitions

Description: The tax code is not populated on the PR during the reorder process.

APAR: IZ48631

ISSUE: 09-12816

Application: Purchase Requisitions

Description: When a purchase requisition is canceled, the PR line is not removed from the Plans tab in the Work Order application.

APAR: IZ50746

ISSUE: 09-13690

Application: Purchase Requisitions

Description: You can duplicate a PR even if you are in a site different from the one set as default insert site for the original PR.

APAR: IZ51281

ISSUE: 09-14003

Application: Purchase Requisitions

Description: If you associate an approved purchase contract with a PR, approve the PR, and then suspend the contract, you can approve the duplicate PR.

APAR: IZ51716

ISSUE: 09-14203

Application: Purchase Requisitions

Description: When you mark the GL Debit Account field on POLine as required on the user interface, the field on a approved PO is not displayed as read-only.

APAR: IZ52310

ISSUE: 09-14510

Application: Purchase Requisitions

Description: If you associate an approved purchase contract with a PR, approve the PR, and then suspend the contract, you can approve the duplicate PR.

APAR: IZ40735

Issue: 08-25711

Application: Quick Reporting

Description: When you add an application exception to a downtime report and then cancel the downtime report dialog box and save the report, duplicate entries for this downtime report are being created and you get an error message when you try to specify the required fields for the downtime report again.

APAR: IZ42624

Issue: 09-10477

Application: Receiving

Description: If you create a PO using a non-base currency and try to receive an associated item that requires inspection, the linecost and

currencyunit cost type lines are incorrect in MATRECTRANS table.

APAR: IZ42621

ISSUE: 09-10481

Application: Receiving

Description: If Maximo Enterprise Adapter tries to process service receipt transactions from Oracle Financial, the transactions are not processed.

APAR: IZ44845

ISSUE: 09-11490

Application: Receiving

Description: After you receive rotating items, the associated ActualDate is not correct on the MatRecTrans TRANSFER records.

APAR: IZ45311

ISSUE: 09-11642

Application: Receiving

Description: If you create a required field from a PO or the Matrectrans table, and there are other empty required fields, a validation error occurs only on the first field. Subsequent empty fields pass the validation.

APAR: IZ45356

ISSUE: 09-11698

Application: Receiving

Description: When you are doing an additional service receipt for a PO line, the receipt line disappears.

APAR: IZ45582

ISSUE: 09-11797

Application: Receiving

Description: The advanced search for a packing slip number fails in the Receiving application.

APAR: IZ45705

ISSUE: 09-11838

Application: Receiving

Description: If you set the Packing Slip field to 'required' in the
Application Designer application, you leave the Packing Slip field blank,
and try to receive the items using the Select Ordered Items button in
the Receiving application, the items are saved.

APAR: IZ46843

ISSUE: 09-12094

Application: Receiving

Description: If you create a PO for a service, approve and receive the
service, the service quantity that is returned surpasses the quantity
that is received.

APAR: IZ47186

ISSUE: 09-12171

Application: Receiving

Description: If you change the conversion while you are receiving items,
the wrong costs are saved.

APAR: IZ47187

ISSUE: 09-12174

Application: Receiving

Description: If you change the conversion while you are receiving items,
the wrong costs are saved.

APAR: IZ48042

ISSUE: 09-12494

Application: Receiving

Description: After you add an item to a storeroom using a
Maximo Enterprise Adapter receipt transaction, the system creates an
inventory record. However, the order unit is not copied from the
item master record.

APAR: IZ48297

ISSUE: 09-12673

Application: Receiving

Description: If a return is made on the PO line, you cannot approve an invoice for the original invoice line amount.

APAR: IZ51185

ISSUE: 09-13956

Application: Receiving

Description: After you fully or partially receive all the items on the PO, the system does not update the items status.

APAR: IZ51664

ISSUE: 09-14193

Application: Receiving

Description: When you receive material against planned material, the status does not change from WMATL to APPR.

APAR: IZ51669

ISSUE: 09-14204

Application: Receiving

Description: When you generate a receipt for an internal purchase order that requires an inspection, the receiving storeroom is not debited.

APAR: IZ54324

ISSUE: 09-15666

Application: Receiving

Description: You cannot reject or return lotted items that require inspection.

APAR: IZ58755

ISSUE: 09-17273

Application: Receiving

Description: If you recall and change any line type to a MATERIAL Line type, the system does not record receipts correctly. There is a mismatch between the PO Lines and Matrectrans tables.

APAR: IZ47500

ISSUE: 09-12250

Application: Reorder

Description: If you do multiple service reorders and use the
Clear Reorder locks function, the reorders are not cleared from
REORDERPAD Table.

APAR: IZ54575

ISSUE: 09-15798

Application: Reorder

Description: The reorder point is not reached, but a PR is still
generated.

APAR: IZ55308

ISSUE: 09-16107

Application: Reorder

Description: In the Inventory application, when you try to re-order an
item, you receive an empty e-mail for the process if you do not use the
preview function before submitting the re-order request.

APAR: IZ39757

Issue: 08-25542

Application: Reporting - Actuate

Description: After you set a date range for an incident report,
the associated query does not filter the incident records by the date
range that you set.

APAR: IZ44589

ISSUE: 09-11352

Application: Reporting - Actuate

Description: If a start date is less than 31 days before today, and this
date is used for the date parameter, the update report fails and the
Divide by zero error message is displayed.

APAR: IZ48190

ISSUE: 09-12627

Application: Reporting – Actuate

When you use the Direct Printing, you are prompted to confirm whether you
allow the system to use unsigned jar files.

APAR: IZ49510

ISSUE: 09-13066

Application: Reporting - Actuate

Description: In the Work Order Tracking application, when you try to print multiple records by using direct print work order details report, only the first record is sent to the printer.

APAR: IZ51725

ISSUE: 09-14205

Application: Reporting - Actuate

Description: The asset cost rollup report includes material charges for work orders that are not closed or canceled.

APAR: IZ52377

ISSUE: 09-14522

Application: Reporting - Actuate

Description: If you run the open WO and PM report from the Preventive Maintenance application for Maximo for Oil and Gas, some SQL server errors occur.

APAR: IZ52935

ISSUE: 09-14953

Application: Reporting - Actuate

Description: When you try to use Direct Print, the process fails and the following message is displayed: "Your immediate report print request cannot be processed at this time. Please contact your system administrator."

APAR: IZ53503

ISSUE: 09-15197

Application: Reporting - Actuate

Description: In the Work Tracking application, when you try to execute a work order list report for a work order that has carriage return, the system locks up with a JS error.

APAR: IZ53866

ISSUE: 09-15403

Application: Reporting – Actuate

Description: In the Work Order Tracking application, when you try to
print multiple records by using direct print work order details report,
only the first record is sent to the printer.

APAR: IZ54333

ISSUE: 09-15670

Application: Reporting – Actuate

Description: When you try to use direct print, the process fails and the
following message is displayed: "Your immediate report print request
cannot be processed at this time. Please contact your system
administrator."

APAR: IZ54880

ISSUE: 09-15998

Application: Reporting – Actuate

When you choose any report from the View Reports tab and click the print
icon, the following error message is displayed: "Unable to build error
page due to internal error."

APAR: IZ58752

ISSUE: 09-17276

Application: Reporting - Actuate

Description: After you apply a hot fix, the work order direct print
function prints reports only in a portrait mode and requests you to use
A4 paper.

APAR: IZ45466

ISSUE: 09-11746

Application: Reporting – Actuate Reports

Description: The negative values on inventory transactions report are
not displayed with the minus sign.

APAR: IZ54517

ISSUE: 09-15764

Application: Reporting – Administration

Description: After you select multiple work orders to change status, and the work orders have attachments, you can print the work orders as part of the status change. However, the attachments are not printed.

APAR: IZ54605

ISSUE: 09-15808

Application: Reporting – Administration

Description: If you duplicate a report that contains parameters and change the parameters before you save new duplicated report, the system applies the parameter changes to the original report.

APAR: IZ50797

ISSUE: 09-13721

Application: Reports Team BIRT Report

Description: You cannot print large scanned PDF file attachments.

APAR: IZ48624

ISSUE: 09-12818

Application: Reports Team BIRT Report

Description: When two identical .doc files are attached to two separate work orders, Maximo makes Microsoft Word to open, but only one of the attached files is printed.

APAR: IZ55459

ISSUE: 09-16196

Application: Request for Quotations

Description: You cannot create an RFQ from a purchase contract without specifying charge values in the purchase contracts.

APAR: IZ49531

ISSUE: 09-13089

Application: Security Groups

Description: In the Receiving application, the security setting of the login user is not used for the Selected Order Items button.

APAR: IZ54442

ISSUE: 09-15724

Application: Service Level Agreements

Description: The system takes from 10 to 15 minutes to apply a service level agreement to a ticket.

APAR: IZ42656

ISSUE: 09-10486

Application: Service Request

Description: If Maximo Enterprise Adapter tries to process service receipt transactions from Oracle Financial, the transactions are not processed.

APAR: IZ51568

ISSUE: 09-14142

Application: Service Requests

Description: If you create a relationship in the Ticket Object, you can associate an asset to a closed service request.

APAR: IZ53621

ISSUE: 09-15290

Application: Service Requests

Description: In the Changes application, you cannot select assets using the Select Value menu.

APAR: IZ53789

ISSUE: 09-15362

Application: Service Requests

Description: If you create a service request and select an affected person, the system does not return the site that is associated with the person.

APAR: IZ54367

ISSUE: 09-15725

Application: Service Requests

Description: The system takes from 10 to 15 minutes to apply a service level agreement to a ticket.

APAR: IZ53762

ISSUE: 09-15353

Application: Solutions

Description: If you delete a solution record, and the solution record is in use for some ticket, the system does not validate the deletion process.

APAR: IZ44239

ISSUE: 09-11883

Application: System - Object

Description: If the CN has '\' or '/' characters, the LDAPsync file does not bring accounts down from the active directory.

APAR: IZ45166

ISSUE: 09-11609

Application: System - Object

Description: If you add a new attribute to the wochangestatus object in the Database Configuration manager, when you try to change the status in the Work Order Tracking application, you cannot retrieve the value list for this new attribute.

APAR: IZ45772

ISSUE: 09-11880

Application: System - Object

Description: When you are running the updatedb utility to install Maximo for Utilities 6.3 on Maximo Asset Management 6.2.2, an error occurs.

APAR: IZ47432

ISSUE: 09-12220

Application: System - Object

Description: In the Purchase Requisitions application, if you enter a value in the default table data of the GL field and create the first purchase requisition, the GL field is populated. However, when you create the second purchase requisition, the GL field is not populated.

APAR: IZ47574

ISSUE: 09-12270

Application: System - Object

Description: If you select a role, person, or person group in the Create
Communication window, and the role, person, or person group contains a
large set of data, the response is slow and causes the server to lock up.

APAR: IZ49601

ISSUE: 09-13134

Application: System - Object

Description: The LDAP synchronizer should update the Maximo PRIMARY
phonenumber before it inserts a new primary phonenumber.

APAR: IZ49730

ISSUE: 09-13183

Application: System - Object

Description: A large number of bulletin board records can cause Maximo
to run out of memory, resulting in a crash.

APAR: IZ49823

ISSUE: 09-13266

Application: System - Object

Description: The MboSetInfo stores the EventTopic object as serializable.
However, the EventTopic tree is not serializable. The conflict between
the two objects causes an exception error when activating a work flow
process with a condition node and two task nodes.

APAR: IZ51257

ISSUE: 09-14002

Application: System - Object

Description: In the Escalations application, if you create an escalation
condition for the work orders using the OR operator, the escalation
cron task collects records that do not match the condition.

APAR: IZ51437

ISSUE: 09-14070

Application: System - Object

Description: After you click Select Action > Associate Systems with
Location, a database cursor is left open. Eventually you run out of
cursors and the system cannot function.

APAR: IZ53221

ISSUE: 09-15035

Application: System - Object

Description: If you use Maximo 6.2.1 with Oracle WebLogic 9.2.2,
 you cannot download the result set to Microsoft Excel®.

APAR: IZ54612

ISSUE: 09-15845

Application: System - Object

Description: If you use a non-English locale in the profile and select
a planned labor, the following error message is displayed:
"The date/time format is not valid."

APAR: IZ56183

ISSUE: 09-16530

Application: System - Object

Description: Unlike Maximo, when you send in a change record using
Maximo Enterprise Adapter, a database configuration import causes the
configdb process to rebuild all associated views.

APAR: IZ39991

Issue: 08-25586

Application: System - User Interface

Description: While you are adding GL components, rows on PO Lines,
and rows on tasks in a work order, the Internet browser performance
gradually degrades.

APAR: IZ42178

Issue: 09-10284

Application: System - User Interface

Description: In the Work Order Tracking application of Maximo Asset
Management 6.2.3, if you try to change the profile information by
typing a letter in the default insert site and pressing Enter,
a window opens and you can select one of the options available.

However, the change does not become effective.

APAR: IZ42236

Issue: 09-10313

Application: System - User Interface

Description: If you create a Select Action menu item and assign a URL
to the item, the item does not load the URL.

APAR: IZ43612

ISSUE: 09-10890

Application: System - User Interface

Description: If you adjust your browser window to fit to the
Advanced Search screen size and use the advanced search, the text
labels overlap each other and are not aligned.

APAR: IZ44190

ISSUE: 09-11208

Application: System - User Interface

Description: In the Contracts module, any contract created with an end
date greater than "12/31/49" produces the following error:
"The end date should be greater than or equal to the start date."

APAR: IZ44407

ISSUE: 09-11284

Application: System - User Interface

Description: If you add a multiline text box to the Advanced Search
of the Roles application and try to use the multiline text box,
you cannot type anything in the text box.

APAR: IZ44768

ISSUE: 09-11455

Application: System - User Interface

Description: In the Work Order Tracking application, if you open a
record, choose to create a communication action, click on the
trash can icon for a communication template attachment, and click Send,
the e-mail that is sent still contains the attachment.

APAR: IZ46778

ISSUE: 09-12045

Application: System - User Interface

Description: In the Work Order Tracking application, if you click the
Clear filter fields icon that is on the List tab, the application
returns all opened work orders instead of clearing the fields.

APAR: IZ47469

ISSUE: 09-12258

Application: System - User Interface

Description: The Select Value is displayed even though
"Turn Smart Fill Off" is checked for the table column.

APAR: IZ47988

ISSUE: 09-12430

Application: System - User Interface

Description: In the Work Order Tracking application, if you drill down
to select a location or asset, the system does not return the correct
search pattern.

APAR: IZ48014

ISSUE: 09-12493

Application: System - User Interface

Description: If the name of a saved query contains quotation marks,
the Current Query field is disabled.

APAR: IZ48579

ISSUE: 09-12772

Application: System - User Interface

Description: Maximo Asset Management 6.2.3 is exposed to cross-site
scripting.

APAR: IZ48908

ISSUE: 09-12875

Application: System - User Interface

Description: When you integrate Maximo Asset Management 6.2.2 with
IBM Tivoli Access Manager to provide Single Sign on capabilities,
you cannot access any Maximo application using the Go To
menu.

APAR: IZ49154

ISSUE: 09-12891

Application: System - User Interface

Description: After you apply Maximo 6.2.2 hot fix 030, the system
cannot wrap the table columns using the
wrapwebclient.wrapreadonlycolumn=true property.

APAR: IZ49279

ISSUE: 09-12936

Application: System - User Interface

Description: If you change an asset description field by replacing
an uppercase with lowercase and move to another field, the description
value changes back to what it was.

APAR: IZ49437

ISSUE: 09-13035

Application: System - User Interface

Description: After you log off Maximo, you can re-enter the system
without authenticating by clicking the Back button in your browser
and refreshing the page.

APAR: IZ49821

ISSUE: 09-13236

Application: System - User Interface

Description: In the Contracts module, if you create a purchase contract
and the end date ends in year 2052, the following error message is
displayed: "The end date should be greater than or equal
to the start date."

APAR: IZ50189

ISSUE: 09-13424

Application: System - User Interface

Description: In the Calendars application, when you use the calendar
icon to reset the start date, the date moves back one month.

APAR: IZ50740

ISSUE: 09-13689

Application: System - User Interface

Description: When the Wonum attribute has 'autokey' set and is read-only,
the description also becomes read-only.

APAR: IZ51651

ISSUE: 09-14160

Application: System - User Interface

Description: In the Assignment Manager application, if you download the
labor hours that an .xls file contains and open the file, you cannot sum
the labor hours in Excel.

APAR: IZ51650

ISSUE: 09-14161

Application: System - User Interface

Description: In the Assignment Manager application, if you download the
labor hours that an .xls file contains and open the file, you cannot
sum the labor hours in Excel.

APAR: IZ53313

ISSUE: 09-15088

Application: System - User Interface

Description: After you install hot fix build number 24 - 27 for
Maximo 6.2.3, the Advanced Search Calendar lookup does not work.

APAR: IZ53389

ISSUE: 09-15111

Application: System - User Interface

Description: If you sign in to Maximo as maxadmin and create a script
entry in the Bulletin Board application, your browser locks.

APAR: IZ53392

ISSUE: 09-15112

Application: System - User Interface

Description: After you manually change AM to PM in a calendar control,
the system does not apply the changes.

APAR: IZ56759

ISSUE: 09-16784

Application: System - User Interface

Description: If you use the select records check box, the system
displays a blank display message box.

APAR: IZ54564

ISSUE: 09-15777

Application: Terms and Conditions

Description: If you create a release PO and add terms and conditions,
you cannot delete this newly added terms and conditions.

APAR: IZ50501

ISSUE: 09-13562

Application: Users

Description: If you sign in to Maximo as a user that does not have
"authorize group reassignment" rights in some security groups, you can
grant users to access these groups.

APAR: IZ54460

ISSUE: 09-15727

Application: Users

Description: You cannot revoke a user's database access using
the Database Access window.

APAR: IZ55694

ISSUE: 09-16361

Application: Users

Description: When the vendor name is too long, an invoice error occurs.

APAR: IZ43352

ISSUE: 09-10811

Application: Workflow

Description: If you are a read-only access user and try to change the status of a work order that is in a workflow in the Workflow application, the status does not change.

APAR: IZ45707

ISSUE: 09-11837

Application: Workflow

Description: If you start a material requisition into workflow and it completes the process, when you go to start it in workflow again, it is not started and the following error message is displayed: "Process 'name' is already active on the current record and there are no assignments for you."

APAR: IZ40902

Issue: 09-10056

Application: Work Order Tracking

Description: When you are setting the scheduled start date and time, you cannot use the up and down arrows to set time.

APAR: IZ43576

ISSUE: 09-10860

Application: Work Order Tracking

Description: In the Report Downtime, if the difference between start date and end date is multiple of one hour, the Hours field displays 60 minutes, instead of changing it to 1 hour.

APAR: IZ44062

ISSUE: 09-11116

Application: Work Order Tracking

Description: From a parent work order that contains location and asset, create a task work, save it, and move it to the Task Work Order. If you try to move or modify the associated asset using the Select Action menu, a window opens without displaying the asset.

APAR: IZ44189

ISSUE: 09-11206

Application: Work Order Tracking

Description: If you filter on the Work Order Plans/Actuals tab
by entering a wildcard character in the Task ID field,
the system locks up.

APAR: IZ44764

ISSUE: 09-11458

Application: Work Order Tracking

Description: When you are creating a communication template from a
work order, Maximo locks up.

APAR: IZ46793

ISSUE: 09-12052

Application: Work Order Tracking

Description: If you create a work order, insert a task, include
a measurement point and the measurement value in the task, and do not
enter the asset information, no error message is displayed. However,
you can find errors in the stack trace.

APAR: IZ46853

ISSUE: 09-12089

Application: Work Order Tracking

Description: If you do not populate the required failureclass field,
click Select Owner, and enter the information in the E-signature window,
you cannot set the ownership for a work order.

APAR: IZ48263

ISSUE: 09-12647

Application: Work Order Tracking

Description: If you try to change a work order to 'COMP' status,
the status change fails.

APAR: IZ48619

ISSUE: 09-12819

Application: Work Order Tracking

Description: If you try to change the status of a work order, and
an open PO is attached, the work order status does not change. However,
the date of the work order status changes.

APAR: IZ48698

ISSUE: 09-12881

Application: Work Order Tracking

Description: If you set order unit as a required field, add services to
a work order, and you do not specify the order unit for the services,
you should not be able to save the record.

APAR: IZ49537

ISSUE: 09-13122

Application: Work Order Tracking

Description: If you select many work orders for the same asset
and try to move the asset to another location, the following error
message is displayed: "Record has been updated by another user.
Refetch and try again."

APAR: IZ49790

ISSUE: 09-13234

Application: Work Order Tracking

Description: After you receive all direct issued items, the system does
not update the work order status from WMATL TO APPR.

APAR: IZ50352

ISSUE: 09-13528

Application: Work Order Tracking

Description: When you are viewing work orders and PMs, the system takes
about 20 minutes to run the query.

APAR: IZ51856

ISSUE: 09-14276

Application: Work Order Tracking

Description: After you create a work order that has tasks in the
Work Order Tracking application, you can open the work order and change
its status in the Quick Reporting application. However, the long
description for the tasks is cleared.

APAR: IZ52916

ISSUE: 09-14901

Application: Work Order Tracking

Description: When you are adding an asset for a child work order, the system should not display decommissioned assets or allow you to select them.

APAR: IZ53363

ISSUE: 09-15093

Application: Work Order Tracking

Description: After you set up an electronic signature for a work order, run DBconfig, restart the application server, and then try to edit the history of the work order, you are not prompted for the signature.

APAR: IZ53423

ISSUE: 09-15158

Application: Work Order Tracking

Description: When you select a planned labor on a duplicated work order, the system does not copy the craft and skill.

APAR: IZ53547

ISSUE: 09-15254

Application: Work Order Tracking

Description: After you report downtime for a work order, the application returns to another work order.

APAR: IZ55415

ISSUE: 09-16193

Application: Work Order Tracking

Description: When you run a query for an assigned labor, the system might take 30 minutes to complete the query.

APAR: IZ56195

ISSUE: 09-16528

Application: Work Order Tracking

Description: When you try to remove a safety plan from a Work Order, the following error message is displayed:

"Record has been updated by another user."

APAR: IZ56194

ISSUE: 09-16532

Application: Work Order Tracking

Description: If the original work order has an attached safety plan,
you cannot save the duplicated work order.

The following issues were resolved for Maximo Asset Management v6.2.4

APAR: IZ31376

ISSUE: 08-21247

Application: Actions

Description: When workflow process has been assigned to some users during
the process and the Stop Workflow window is selected, then the list of
users displayed in the table is not always the currently assigned users.
Rather, the table might contain users that have already completed
their assignments.

APAR: IZ42273

ISSUE: 09-10336

Application: Application Designer

Description: You cannot set a default for StoreLoc in the
Quick Reporting application using the AppFieldDefaults table.

APAR: IZ39789

ISSUE: 08-25545

Application: Application Designer

Description: The fields on the user interface detect when the mouse
button is released while the pointer is over a field, which causes the
field to be made active.

APAR: IZ36122

ISSUE: 08-23797

Application: Application Designer

Description: The dynamic default value does not work when you do
a quick insert.

APAR: IZ35453

ISSUE: 08-23274

Application: Application Designer

Description: When you minimize a child table, the parent table is also
minimized.

APAR: IZ34154

ISSUE: 08-22671

Application: Application Designer

Description: In 6.2.2, you cannot export multiple application
definitions to 1.xml file.

APAR: IZ34137

ISSUE: 08-22653

Application: Application Designer

Description: If the Password Required field in the Application Designer
is blank, the field can be saved in the work order Tracking Application.

APAR: IZ33504

ISSUE: 08-22197

Application: Application Designer

Description: Errors appear in the console when you add a table in the
Application Designer.

--

APAR: IZ32456

ISSUE: 08-21702

Application: Application Designer

Description: You cannot create a shortcut in the Access Key field in
the Select Action menu in the Application Designer.

APAR: IZ31434

ISSUE: 08-21297

Application: Application Designer

Description: In the properties window, when a value is typed into the
Input Mode, Change Event, or GOTO Application fields in lowercase, the
value should be validated and changed to uppercase.

APAR: IZ29723

ISSUE: 08-20074

Application: Application Designer

Description: When you create a Long Description using the
Application Designer in the Work Order application, the Problem Code
and Failure Code fields are not read-only.

APAR: IZ34177

ISSUE: 08-22669

Application: Asset Catalog

Description: A user without a default site cannot select classifications
in Service Desk > SR > Classifications > "Classify" Detail menu.

APAR: IZ37187

ISSUE: 08-24420

Application: Assets

Description: When you select an asset, choose Swap Assets from the
Select Action menu, and click the Detail menu icon of the
Replacing Asset list, the list of assets takes too much time to display.

APAR: IZ39741

ISSUE: 08-25539

Application: Assets

Description: Maximo 6.2.3 users are experiencing performance problems
when moving an ASSET from one location to another.

APAR: IZ37496

ISSUE: 08-24527

Application: Assets

Description: If one location has a different rotating item associated
with it, the swap function performs an action for one item, but not for

another item.

APAR: IZ33676

ISSUE: 08-22335

Application: Assets

Description: When a downtime code is entered in Domain DOWNCODE and an Organization is specified, the code does not appear in the Downtime Code Value List in the Report Downtime window.

APAR: IZ33543

ISSUE: 08-22159

Application: Assets

Description: The following error message is received when you click Next: "Do you want to save your changes before continuing."

APAR: IZ33398

ISSUE: 08-22101

Application: Assets

Description: When reporting downtime against an asset from the Work Order Tracking application the Assetstatus.operational value is reversed.

APAR: IZ31647

ISSUE: 08-21359

Application: Assets

Description: The following error message is received when you select Planned Tools on the Actuals tab for a rotating asset tool: "Field quantity is read-only."

APAR: IZ30772

ISSUE: 08-20814

Application: Assets

Description: An upgrade sets different lengths for the same reference attributes and objects.

APAR: IZ29812

ISSUE: 08-20149

Application: Assets

Description: Error occurs when copying spare parts from one asset to another. Also, the item remarks are not copied to the new asset.

APAR: IZ39642

ISSUE: 08-25528

Application: Assignment Manager

Description: If you try to assign a labor to a task that is marked as COMP, the status of the associated labor assignment should remain ASSIGNED.

APAR: IZ32961

ISSUE: 08-21908

Application: Assignment Manager

Description: The Assignment Manager download function is not using the correct seven-day window.

APAR: IZ31211

ISSUE: 08-21165

Application: Assignment Manager

Description: If the query that is selected contains an Order By clause, the Select Labor query in Assignment Manager does not work.

APAR: IZ31204

ISSUE: 08-21162

Application: Assignment Manager

Description: When you attempt to assign to a labor resource that only has five hours available in their calendar for today and no further hours on any future days, the Maximo application freezes and there are no errors in the log files.

APAR: IZ41069

ISSUE: 09-10131

Application: Attachment Documents

Description: When you associate folders in the Work Order Tracking application, the system locks up.

APAR: IZ33702

ISSUE: 08-22344

Application: Attachment Documents

Description: The Service Request does not carry over the Attachment to the created Work Order.

APAR: IZ35669

ISSUE: 08-23597

Application: Bulletin Board

Description: The Bulletin Board Application is not working correctly when duplicating existing messages.

APAR: IZ40968

ISSUE: 09-10070

Application: Changes

Description: When you go to Move/Modify Assets from the Select Action menu and you add a new Asset using the Modify tab, then you click the Move tab and click New Row, two different Change Numbers are displayed.

APAR: IZ38514

ISSUE: 08-24922

Application: Chart of Accounts

Description: When deactivating a GL component that is used in a large number of GL account codes, an 'out of memory' errors occur.

APAR: IZ30880

ISSUE: 08-20833

Application: Chart of Accounts

Description: You are able to delete a GL component even though the status is 'Active/ Used in GL accounts' on open records.

APAR: IZ27644

ISSUE: 08-18793

Application: Chart of Accounts

Description: 'External Tools Control Accounts' and 'Internal Tools
Control Accounts' security settings should be removed.

APAR: IZ43547

ISSUE: 09-10850

Application: Classification Catalog

Description: If you use the classification search to display only the
attributes that you want by adding some data one by one to the
Alphanumeric Value field as you go, each time you press Filter,
all values currently entered in the Alphanumeric Value field are cleared.

APAR: IZ42441

ISSUE: 09-10407

Application: Classification Catalog

Description: If the item of a duplicated asset and the item of the
original asset have the same classification hierarchy structure,
and you associate the duplicated asset with another item, then the
duplicated asset does not reflect its new associated item.

APAR: IZ38901

ISSUE: 08-25113

Application: Classification Catalog

Description: The Classification Description is missing from the
classification record.

APAR: IZ36925

ISSUE: 08-24257

Application: Classification Catalog

Description: In the Asset Classification search, column titles can be
blank in the Select Value window.

APAR: IZ35512

ISSUE: 08-23363

Application: Classification Catalog

Description: Using a Numeric Range Domain within a Classification has
no effect and you receive an error.

APAR: IZ33130

ISSUE: 08-21999

Application: Classification Catalog

Description: The system hangs when adding three attributes to 16,000 assets.

APAR: IZ40032

ISSUE: 08-25588

Application: Communication Template

Description: The default template is not selected the first time a communication is created on an Incident Record.

APAR: IZ33924

ISSUE: 08-22528

Application: Condition Monitoring

Description: The MeasurePointWoGenCronTask cron task causes the MXServer to run out of memory due to the number of MeasurePoints and Meter objects that persist on the server.

APAR: IZ31788

ISSUE: 08-21426

Application: Configurable Start Center

Description: The 'result set query' that is selected does not include all attributes that should be available.

APAR: IZ29923

ISSUE: 08-20263

Application: Configuration

Description: The user-defined GL account field only validates against forms, not actual component values that are defined in the Database Configuration application.

APAR: IZ34986

ISSUE: 08-22992

Application: Configuration

Description: Configdb.bat fails with Maximo 6 if statistics that have the same name as an index exist on an SQL Server database.

APAR: IZ34016

ISSUE: 08-22583

Application: Configuration

Description: You cannot create interface tables with more than 16 character names using DB2.

APAR: IZ33935

ISSUE: 08-22541

Application: Configuration

Description: RestoreFromBackup should drop indexes before loading data and recreate indexes afterward.

APAR: IZ33817

ISSUE: 08-22476

Application: Configuration

Description: The user wants a pre-check before running DBCONFIG.

APAR: IZ40755

ISSUE: 09-10004

Application: Cost Management

Description: If you assign a cost management project to a work order and go to Cost Management from the Detail menu in the Project ID field, the Project tab is blank.

APAR: IZ42709

ISSUE: 09-10506

Application: Crafts

Description: If a labor record is associated with more than one craft, the default craft no longer works.

APAR: IZ33071

ISSUE: 08-21963

Application: Currency

Description: The Total Base Cost in the PO Application is calculated with the exchange rate from Org1 even when the POI was created for Org2.

APAR: IZ26549

ISSUE: 08-18364

Application: Currency

Description: During receipt reversal, the tax rate is calculated incorrectly.

APAR: IZ40464

ISSUE: 08-25658

Application: Database Configuration

Description: During the upgrade from release 6.2.1 to release 6.2.2, there is mismatch between the maxsysindexes/maxsyskeys table and the DB2 catalog tables.

APAR: IZ26933

ISSUE: 08-18608

Application: Drilldown

Description: Selection using the drilldown denies a valid selection after the first selection resulted in an error or exception.

APAR: IZ31807

ISSUE: 08-21435

Application: Electronic Signature

Description: Electronic signature does not work when you generate a PM from the List tab.

APAR: IZ32553

ISSUE: 08-21755

Application: Failure

Description: You cannot filter in the Copy Failure Hierarchy window in the Failure Code Application.

APAR: IZ34191

ISSUE: 08-22729

Application: Field Security

Description: When you attempt to change the status of newly created job plan, you should receive an error when the status changes from DRAFT to ACTIVE.

APAR: IZ43924

ISSUE: 09-11057

Application: Incident

Description: If there are two person records with the same user name and you choose one of the records to associate with a new incident, the Affected Person field is populated with the wrong record.

APAR: IZ39647

ISSUE: 08-25529

Application: Incident

Description: On the Activities tab, the Workflow and Owner buttons are accessible, and you are able to perform actions on these buttons even though you have read-only access.

APAR: IZ33550

ISSUE: 08-22196

Application: Incident

Description: You cannot create communications from within incidents.

APAR: IZ33158

ISSUE: 08-21995

Application: Incident

Description: You cannot create communications from within incidents.

APAR: IZ31362

ISSUE: 08-21251

Application: Incident

Description: When there are no documents attached to an incident and the Originating Record of that incident, some documents are shown in an incident unexpectedly.

APAR: IZ31600

ISSUE: 08-21357

Application: Incident

Description: On the Activities tab, the Workflow and Owner buttons are accessible, and you are able to perform actions on these buttons even though you have read-only access.

APAR: IZ29567

ISSUE: 08-19947

Application: Installation

Description: The About Maximo information does not show the version of Maximo core and Maximo Mobile.

APAR: IZ40485

ISSUE: 08-25664

Application: Inventory

Description: The Assembly Kit and Deassembly Kit do not update the current balance of child items.

APAR: IZ39853

ISSUE: 08-25556

Application: Inventory

Description: The Site does not validate when you have an item with multiple vendors at different sites. The Vendor field is populated with the first vendor in the list regardless of site.

APAR: IZ39303

ISSUE: 08-25355

Application: Inventory

Description: There should not be a download limit in the Inventory application.

APAR: IZ38520

ISSUE: 08-24925

Application: Inventory

Description: The Physical Count can be set in the future and when you reconcile the balances, the reconciliation can take place before the actual count date.

APAR: IZ38379

ISSUE: 08-24869

Application: Inventory

Description: For a condition enabled item, when you send the inbound Maximo Enterprise Adapter transaction MXINVENTORY and it has not been added to a storeroom, the transaction fails.

APAR: IZ37664

ISSUE: 08-24602

Application: Inventory

Description: When changing the site, the Select Value in to Storeroom is not populating in the Transfer Current Item window.

--

APAR: IZ37451

ISSUE: 08-24524

Application: Inventory

Description: An additional line is created in the Vendors section when you try to add a non-disqualified vendor after you tried to add a disqualified vendor.

APAR: IZ31323

ISSUE: 08-21227

Application: Inventory

Description: For a condition-enabled item, the incorrect Standard Cost and Average Cost are displayed.

APAR: IZ31263

ISSUE: 08-21178

Application: Inventory

Description: The Physical count balance does not take into account balances from multiple bins.

APAR: IZ31184

ISSUE: 08-21118

Application: Inventory

Description: The Expiration Date of a lotted item is overwritten during a transfer.

APAR: IZ31183

ISSUE: 08-21125

Application: Inventory

Description: The following error message is received after GL Validation has been deactivated: "GL DEBIT ACCOUNT IS NOT VALID".

APAR: IZ42971

ISSUE: 09-10646

Application: Invoices

Description: If you do not have rights to the WAPPR status in the Invoice application, you should not be able to see synonym status values and select them.

APAR: IZ42761

ISSUE: 09-10563

Application: Invoices

Description: The invoice matching process for the Maximo Enterprise Adapter inbound invoice transactions is run when the collaboration switch is set to turn off this process.

APAR: IZ42395

ISSUE: 09-10370

Application: Invoices

Description: When you add a standard service on the invoice and a contract is used, the pop-up value list for the item field contains no records.

APAR: IZ42392

ISSUE: 09-10369

Application: Invoices

Description: If receipts are created from invoices and the Issue To field
is blank, the associated invoices that contain a standard service
cannot be approved.

APAR: IZ35802

ISSUE: 08-23662

Application: Invoices

Description: The POLINES are not copied to the invoice.

APAR: IZ31759

ISSUE: 08-21421

Application: Invoices

Description: You cannot change the status of an invoice to the synonym
value of ENTERED.

APAR: IZ44329

ISSUE: 09-11279

Application: Issues and Transfers

Description: If you transfer a PO from a storeroom to another,
the Receipt field should display the status of COMP.

APAR: IZ39884

ISSUE: 08-25564

Application: Issues and Transfers

Description: When you transfer the same items with two different
conditions the current balance updates incorrectly.

APAR: IZ37852

ISSUE: 08-24755

Application: Issues and Transfers

Description: New field added to the Issues and Transfer application
should be editable, rather than read-only, in the Select Items for
Return window.

APAR: IZ36674

ISSUE: 08-24105

Application: Issues and Transfers

Description: The following error message is received when you attempt to transfer a non-rotating item from one site on an organization to another site within a different organization: "Not a valid material usage transaction GL account. Either the required components are not filled or the component's values are not valid."

APAR: IZ35020

ISSUE: 08-21306

Application: Purchase Orders

Description: The following error message is displayed when you try to approve a PO after changing the Unit Cost: "Could not change PO #### status to APPR. PO cannot be approved. The Cost of the release PO exceeds the maximum value of 1000 USD on the Contract by 800 USD".

APAR: IZ31248

ISSUE: 08-21166

Application: Purchase Orders

Description: The Quantity Received (polines.rcdquantity) is improperly calculated when you create a partial receipt and then a partial invoice for the received quantity.

APAR: IZ43128

ISSUE: 09-10701

Application: Purchase Requisitions

Description: After you delete a PO line, the status of the cross-site PR that was referenced to that PO line does not change, and the PO line reference is not removed from the cross-site PR.

APAR: IZ40652

ISSUE: 08-25685

Application: Purchase Requisitions

Description: Contract Reference field is populated even though it is read-only.

APAR: IZ40458

ISSUE: 08-25657

Application: Purchase Requisitions

Description: An 'incorrect status' message is displayed after a failed attempt to change the PR to a status of STOS.

APAR: IZ38420

ISSUE: 08-24885

Application: Purchase Requisitions

Description: The following error message is displayed when downloading data in PR application result set page:
"Error 500--Internal Server Error."

APAR: IZ36112

ISSUE: 08-23793

Application: Purchase Requisitions

Description: Lookup for Work Order field in PR Lines shows no values.

APAR: IZ34173

ISSUE: 08-22668

Application: Purchase Requisitions

Description: PRs are not opening after PO lines are deleted.

APAR: IZ32729

ISSUE: 08-21828

Application: Purchase Requisitions

Description: When the PR is approved and is set to CLOSE PR and create PO when the items are from contract, it created as a PO for each line on this PR.

APAR: IZ31383

ISSUE: 08-21300

Application: Purchase Requisitions

Description: The following error message is displayed when saving a record after changing the newly create Site field in the Charge To section: "Purchase requisition line 1 must have at least one purchase requisition cost line associated with it."

APAR: IZ31232

ISSUE: 08-21168

Application: Purchase Requisitions

Description: When you select the Allow Receipts against Services by Default in the PO Options, the Receipts Required flag is not set when doing a Reorder on Services.

APAR: IZ38655

ISSUE: 08-24960

Application: Quick Reporting

Description: The wrong work order is displayed after you add a downtime.

APAR: IZ37783

ISSUE: 08-24718

Application: Quick Reporting

Description: If you are in a different time zone than the database server, then the transaction date, start time, and finish time are incorrect.

APAR: IZ42998

ISSUE: 09-10657

Application: Receipts

Description: You should not be able to enter a 0 quantity for receipts in the Receipts application.

APAR: IZ41175

ISSUE: 09-10149

Application: Receipts

Description: The P-Card Receiving application requires that you are granted access to the regular Receiving application so that your P-Card Receiving application works.

APAR: IZ40702

ISSUE: 08-25698

Application: Receipts

Description: The Select Ordered Items feature does not work unless
the security group is granted the Select Ordered Items option in the
core Receiving application.

APAR: IZ39489

ISSUE: 08-25519

Application: Receipts

Description: You cannot receive multiple service line items.

APAR: IZ39048

ISSUE: 08-25202

Application: Receipts

Description: While switching from receiving an item to the Inventory
application, the user interface displays the first Storeroom, in
alphabetic order, that the item is in.

APAR: IZ37743

ISSUE: 08-24697

Application: Receipts

Description: The following error is received when you save a record:
"ADD is not allowed on MATUSETRANS".

APAR: IZ37433

ISSUE: 08-24520

Application: Receipts

Description: E-Sig is not activating on Change of Status for
Inspect-on-Receipt items.

APAR: IZ37079

ISSUE: 08-24328

Application: Receipts

Description: The Default Table data section was added to the Receipts
tabs for Materials and Services. All fields are populated except for

the Remarks field.

APAR: IZ36284

ISSUE: 08-23924

Application: Receipts

Description: The Packing Slip field should be validated only when selecting the next record.

APAR: IZ34544

ISSUE: 08-22857

Application: Receipts

Description: The Packing Slip field is not taken into account when you receive items.

APAR: IZ34108

ISSUE: 08-22585

Application: Receipts

Description: The following error message is displayed when you receive an item: "The balance in the bin will become negative as a result of this transaction. "

APAR: IZ32557

ISSUE: 08-21760

Application: Receipts

Description: When a service is received, the Commodity and Commoditygroup columns in the SERVRECTRANS table are not populated.

APAR: IZ32397

ISSUE: 08-21700

Application: Receipts

Description: The following error message is displayed when you receive Rotating Items: "Record has been updated by another user. Refetch and try again".

APAR: IZ31758

ISSUE: 08-21432

Application: Receipts

Description: When receiving a Purchase Order that has a large quantity of Receipt lines for Rotating Items, the server might stop working.

APAR: IZ31364

ISSUE: 08-21250

Application: Receipts

Description: The following error message is displayed when clicking Select Items for Return and when filtering by the Entered By field: 'Cannot query on field entered by'.

APAR: IZ31016

ISSUE: 08-20901

Application: Receipts

Description: The autopopulating of lotnum is inconsistent.

APAR: IZ21303

ISSUE: 08-15967

Application: Receipts

Description: You cannot receive a large quantity of a rotating item in the Receiving application.

APAR: IZ38899

ISSUE: 08-25110

Application: Reorder

Description: The reorder point is not reached, but a PR is still generated.

APAR: IZ37740

ISSUE: 08-24691

Application: Reorder

Description: Time stamps are in EST when the user's profile is set for Central.

APAR: IZ33674

ISSUE: 08-22301

Application: Reorder

Description: Direct Issue items and services do not run with European locale and language settings.

APAR: IZ31945

ISSUE: 08-21516

Application: Reorder

Description: The PRs Unit Cost is incorrect.

APAR: IZ39451

ISSUE: 08-25516

Application: Reporting - Actuate

Description: The download window is not displayed, unless you try to run the report and download it at the same.

APAR: IZ35664

ISSUE: 08-23609

Application: Reporting - Actuate

Description: With Internet Explorer 7, the following error is received when you choose Direct Print: "The web page you are viewing is trying to close the window. Do you want to close this window?"

APAR: IZ28635

ISSUE: 08-19373

Application: Reporting - Actuate

Description: PDFs created from Scanned Documents are not printing with the Work Pack.

APAR: IZ37215

ISSUE: 08-24417

Application: Reporting - Actuate

Description: The following error message is displayed when a field that is defined as a Dynamic Text Field contains the letters "y" or "Y", or "n", or "N" by themselves, and a WO Details report is run from Maximo: "Basic Error:1002module:afc dynamictext.bas line 1205:user error."

APAR: IZ33927

ISSUE: 08-22530

Application: Reporting - Actuate

Description: A Maximo "where clause" causes the SQL to fail when passed
to reports running on Oracle.

APAR: IZ39018

ISSUE: 08-25173

Application: Reporting - Actuate

Description: "Summary of Asset Failures by Location" report fails to
run in Maximo 6.2.3 with Oracle.

APAR: IZ37822

ISSUE: 08-24764

Application: Reporting - Actuate

Description: The Inventory Adjustments Report contains incorrect values.

APAR: IZ31063

ISSUE: 08-20947

Application: Reporting - Actuate

Description: In the Asset Measurement History Report, the graph output
is incorrect.

APAR: IZ40317

ISSUE: 08-25635

Application: Reporting - Actuate

Description: The Direct Print icon does not function properly when
using SSL for Maximo.

APAR: IZ39097

ISSUE: 08-25311

Application: Reporting - Actuate

Description: You cannot print attached documents.

APAR: IZ38490

ISSUE: 08-24918

Application: Reporting - Actuate

Description: If the planned material list for a Work Order has records
with duplicate item numbers, only one of the records is displayed in
the Work Order Pick List report.

APAR: IZ38062

ISSUE: 08-24820

Application: Reporting - Actuate

Description: When a report that has required parameters is registered
in Report Administration, the parameters appear on the registration
screen.

APAR: IZ36673

ISSUE: 08-24104

Application: Reporting - Actuate

Description: If Print Work Orders is selected on records with
attachments, a status change is not refreshing.

APAR: IZ36670

ISSUE: 08-24103

Application: Reporting - Actuate

Description: A problem occurs when displaying data.

APAR: IZ33352

ISSUE: 08-22095

Application: Reporting - Actuate

Description: Inventory ABC analysis database works only for MAXADMIN
group users.

APAR: IZ31859

ISSUE: 08-21501

Application: Reporting - Actuate

Description: If you select work orders on the List tab, change their
status, and click the print option, the unselected work orders are
printed instead of the selected ones.

APAR: IZ09061

ISSUE: 07-28921

Application: Reporting - Actuate

Description: The PO Details Report displays incorrect data for the
"Ship To Address".

APAR: IZ39133

ISSUE: 08-25307

Application: Reporting Administration

Description: After all the XML files are regenerated for reports,
all the request pages are displayed in English rather than the language
with which you are logged on.

APAR: IZ37061

ISSUE: 08-24308

Application: Request for Quotations

Description: An error occurs when you attempt to go from the
RFQ Quotations tab to the Inventory tab.

APAR: IZ35335

ISSUE: 08-23140

Application: Request for Quotations

Description: Record is not found in the MAXVARS table for MAXVAR PR
Approval.

APAR: IZ37782

ISSUE: 08-24721

Application: Roles

Description: In the Asset List, the location from another site is saved
to the database.

APAR: IZ39981

ISSUE: 08-25584

Application: Roles

Description: A problem occurs when you send an e-mail notification from Workflow.

APAR: IZ36012

ISSUE: 08-23759

Application: Roles

Description: If the workflow role is changed from Userdata to Dataset, it does not work.

APAR: IZ31982

ISSUE: 08-21568

Application: Roles

Description: A relationship error occurs when you use a dot ('.') within a Person Group name.

APAR: IZ43112

ISSUE: 09-10699

Application: Routes

Description: When the site of a route stop location is different from the route site, and you try to save the route, the Route Stop disappears.

APAR: IZ38963

ISSUE: 08-25163

Application: Safety Hazards

Description: If a hazard has a description with over 50 characters, you cannot add the hazard to a safety plan.

APAR: IZ30242

ISSUE: 08-20512

Application: Safety Hazards

Description: When two different sites have a safety plan with the same name and you link to safety plans from a work order, the wrong safetyplan might be displayed.

APAR: IZ35324

ISSUE: 08-23141

Application: Security Groups

Description: The security option "Set Work Order status to Waiting for Materials" does not prevent users from changing the status to WMATL.

APAR: IZ39505

ISSUE: 08-25514

Application: Service Desk

Description: If an inactive user is selected, the Name lookup in Service Requests displays inactive users, but does not save or fill out additional information.

APAR: IZ35536

ISSUE: 08-23387

Application: Service Desk

Description: In the Summary column, you cannot change from sorting in ascending order to sorting in descending order.

APAR: IZ36487

ISSUE: 08-23980

Application: Service Request

Description: In the Service Request application, when you click Self Service > Service Requests > Create Service Request, E-Sig does not work.

APAR: IZ31189

ISSUE: 08-21123

Application: Service Request

Description: The wrong Person information is displayed when you use the "GO TO Person" application in the Incident application.

APAR: IZ37279

ISSUE: 08-24463

Application: Solutions

Description: The following error message is displayed after entering information in Service Desk > Solutions: "The value PPOLLINGER exceeds the maximum field length."

APAR: IZ39105

ISSUE: 08-25305

Application: Start Center

Description: The e-mail address is displayed incorrectly in the Start Center portlet.

APAR: IZ40656

ISSUE: 08-25683

Application: System

Description: When a new relationship is created for a text field, the Maximo user interface ignores relationships that have a NULL value.

APAR: IZ40174

ISSUE: 08-25620

Application: System

Description: You cannot add characters (ASCII Decimal 96) character to the Work Order description.

APAR: IZ38200

ISSUE: 08-24823

Application: System

Description: The Summary Asset Failure by Location Report does not run correctly.

APAR: IZ35852

ISSUE: 08-23692

Application: System – Object

Description: If the MaxServiceSet, MaxObjectSet, and MaxAttributeSet objects are compiled for release 7.1.1, any RMI invocation of these objects causes an error.

APAR: IZ40726

ISSUE: 08-25708

Application: System – Object

Description: The Default Value does not work on child tables.

APAR: IZ36497

ISSUE: 08-23978

Application: System – Object

Description: Execution of scripts in the hot fix dated 09/19/08 generated errors in the log.

APAR: IZ32478

ISSUE: 08-21701

Application: System – Object

Description: An Advanced Search results in an error when you use an extra language.

APAR: IZ31798

ISSUE: 08-21434

Application: System – Object

Description: The Where Clause adds (type not in ('STOREROOM')) multiple times regardless of how many times you add a different query.

APAR: IZ31010

ISSUE: 08-20900

Application: System – Object

Description: When the Long Description has been created in one language and then modified in another language, a multilanguage 6.2.1 database error occurs due to invalid column index.

--

APAR: IZ43209

ISSUE: 09-10735

Application: System – User Interface

Description: The second time you click Advanced Search on the List tab, the Classification field is not cleared.

APAR: IZ40706

ISSUE: 08-14587

Application: Work Order Tracking

Description: On a duplicate Work Order, the Craft is not displayed.

APAR: IZ18550

ISSUE: 08-14520

Application: Work Order Tracking

Description: You cannot use an Item Master record that does not have an
inventory on a plan.

APAR: IZ18151

ISSUE: 08-14314

Application: Work Order Tracking

Description: The following error is received when tabbing out of the
Rotating Asset field: 'Rotating Asset xxx is not a valid asset, or its
status is not an operating status'.

APAR: IZ17721

ISSUE: 08-13943

Application: Work Order Tracking

Description: When the Craft field is changed (or a new Craft is entered)
and the Work Order is saved in APPR state, the Rate field is set to 0.00.

APAR: IZ17507

ISSUE: 08-13782

Application: Work Order Tracking

Description: Hazards and precautions are not updated correctly when
changes are made, causing unpredictable results.

APAR: IZ17110

ISSUE: 08-13514

Application: Work Order Tracking

Description: Duplicate Labors are added on the Work Order Actuals when you sort on the Labor column.

APAR: IZ17105

ISSUE: 08-13696

Application: Work Order Tracking

Description: History Work Order should not be able to be edited.

APAR: IZ16851

ISSUE: 08-13338

Application: Work Order Tracking

Description: In 6.2.1 with a SQL database, when using the select value for an attribute when searching Classification search in work order tacking, an 'assetcatalog#NoAttribute' occurs.

APAR: IZ16690

ISSUE: 08-13176

Application: Work Order Tracking

Description: The Select Value field in the Advanced Search for Failure Class does not work.

APAR: IZ16270

ISSUE: 08-12945

Application: Work Order Tracking

Description: The Apply Route action does not limit routes displayed to the correct sites.

APAR: IZ15476

ISSUE: 08-12368

Application: Work Order Tracking

Description: There is no requirement in Maximo in Maximo that the PersonID and the UserID are the same.

APAR: IZ14932

ISSUE: 08-11986

Application: Work Order Tracking

Description: Select Records in the List tab does not work correctly.

APAR: IZ13941

ISSUE: 08-11353

Application: Work Order Tracking

Description: When creating a follow-up Work Order from an existing
Work Order, the REPORTEDBY field is defaulting to the REPORTEDBY value
for the original Work Order rather than defaulting to the user that
created the follow up Work Order.

Application: Reorder

Description: SQL Server scripts used in hot fix package are not correct.

APAR: IZ00358

ISSUE: 07-19273

Application: Reorder

Description: If you attach the PR lines to a PO on another site, items are inadvertently copied on the next reorder for that site.

APAR: None

ISSUE: 07-17264

Application: Reporting - Actuate

Description: Reports added through Reports Administration do not appear in the Quick Access menu.

APAR: None

ISSUE: 07-12629

Application: Reporting - Actuate

Description: Reports do not run in Maximo 6.2 and later releases when LDAP is enabled.

APAR: None

ISSUE: 07-12341

Application: Reporting - Actuate

Description: Reports show incorrect date format.

APAR: None

ISSUE: 07-12185

Application: Reporting - Actuate

Description: When using Direct Print, the printed report does not use the Locale settings from the user profile.

APAR: None

ISSUE: 07-11477

Application: Reporting - Actuate

Description: List Report does not run after running a saved query with formatting.

APAR: None

ISSUE: 07-11320

Application: Reporting - Actuate

Description: Bound variable added in Service Groups application results in error message when report SQL runs.

APAR: None

ISSUE: 07-11277

Application: Reporting - Actuate

Description: Error generated due to password case sensitivity issues in SQL Server 2005.

APAR: None

ISSUE: 07-10768

Application: Reporting - Actuate

Description: Asset cost rollup fetches all assets on the database and it
takes ages to complete
(asset_costrollup_act and asset_costrollup_update_act.rod) - SQL Server
or Oracle.

APAR: None

ISSUE: 07-10736

Application: Reporting - Actuate

Description: Users receive Actuate log in screen when they attempt to
run reports.

APAR: None

ISSUE: 07-10699

Application: Reporting - Actuate

Description: Inventory balance shows up incorrectly on report.

APAR: None

ISSUE: 07-10528

Application: Reporting - Actuate

Description: Business Objects Enterprise Licenses for Oracle are not
being released.

APAR: None

ISSUE: 07-10276

Application: Reporting - Actuate

Description: When Print with Workpack is selected, Work Order attachments
print multiple times and Assets application attachments do not print.

APAR: None

ISSUE: 06-18889

Application: Reporting - Actuate

Description: When scheduling a query, the Actuate Server can only use
Eastern Standard Time.

APAR: None

ISSUE: 06-20834

Application: Reporting - Actuate

Description: If you are sending a report through e-mail and press the
Enter key when entering comments, an error message appears when you
click Submit to send the report.

APAR: None

ISSUE: 06-20201

Application: Reporting - Actuate

Description: Open work orders and PMs report fails if you are reporting
against an asset with a meter.

APAR: None

ISSUE: 06-20155

Application: Reporting - Actuate

Description: Blank screen appears instead of request page.

APAR: None

ISSUE: 06-19392

Application: Reporting - Actuate

Description: Multiple attached documents not detected.

APAR: None

ISSUE: 06-11038

Application: Reporting - Actuate

Description: First line does not appear when printing Direct Print
reports.

APAR: None

ISSUE: 88080

Application: Reporting - Actuate

Description: Issues related to sending a report through e-mail.

APAR: None

ISSUE: 13038

Application: Reporting - Actuate

Description: A custom method is used to generate a unique report output
name based on a time stamp and the report name. If users click on the
same report within the same one second window, the name for all those
report output files is identical.

APAR: IZ14185

ISSUE: 08-11465

Application: Reporting - Actuate

Description: Users receive Actuate login screen when trying to run
reports.

APAR: IZ12655

ISSUE: 08-10498

Application: Reporting - Actuate

Description: Users receive Actuate login screen when trying to run
reports.

APAR: IZ12522

ISSUE: 08-10427

Application: Reporting - Actuate

Description: Unable to Direct Print when context name is changed.

APAR: IZ11240

ISSUE: 08-10406

Application: Reporting - Actuate

Description: When the system creates a MBO for each maxattribute record
when generating a report, there is a potential performance problem.

APAR: IZ11556

ISSUE: 07-30398

Application: Reporting - Actuate

Description: Report output files generate incorrectly when multiple

reports are submitted at the same second.

APAR: IZ10905

ISSUE: 07-30019

Application: Reporting - Actuate

Description: Preview option not available on second tab (Sorting) or third tab (Groups) when creating a query report.

APAR: IZ10075

ISSUE: 07-29627

Application: Reporting - Actuate

Description: When LDAP is enabled in Maximo 6.2x, reports do not run.

APAR: IZ09834

ISSUE: 07-29483

Application: Reporting - Actuate

Description: A report enabled for Direct Print cannot print both the report and the attached document together.

APAR: IZ09588

ISSUE: 07-29294

Application: Reporting - Actuate

Description: Connections to the Oracle database are not being released.

APAR: IZ09597

ISSUE: 07-29291

Application: Reporting - Actuate

Description: .XML file for WOPRINT_ACT.ROX does not generate.

APAR: IZ09302

ISSUE: 07-29085

Application: Reporting - Actuate

Description: When two documents are attached, only the second one is printed.

APAR: IZ09294

ISSUE: 07-29081

Application: Reporting - Actuate

Description: Inventory Balance report displays incorrect amounts.

APAR: IZ09104

ISSUE: 07-28978

Application: Reporting - Actuate

Description: In those reports with attachments, the attachments are not always printed correctly.

APAR: IZ08951

ISSUE: 07-28922

Application: Reporting - Actuate

Description: When sending a report using e-mail, the system searches for that report repeatedly resulting in a performance issue.

APAR: IZ09061

ISSUE: 07-28921

Application: Reporting - Actuate

Description: PO Details report shows incorrect data in Ship to Address field.

ISSUE: 08-22174

Application: Reporting Administration

Description: When you use direct print and direct print with attachments, several issues might occur such as reports not sequencing with the attachments, long delays in printing the report or attachment, and problems arising when you use several versions of Java Development Kit.

APAR: IZ07174

ISSUE: 07-27398

Application: Reporting - Actuate

Description: Reports fail without warning if path to attached documents

is not set.

APAR: IZ06844

ISSUE: 07-27104

Application: Reporting - Actuate

Description: E-mail lookup does not return any records.

APAR: IZ06068

ISSUE: 07-26466

Application: Reporting - Actuate

Description: Labels appear incorrectly in non-English language database.

APAR: IZ05953

ISSUE: 07-26118

Application: Reporting - Actuate

Description: INVENTORY_ABC_UPDATE_ACT.ROD not updating the database.

APAR: IZ05820

ISSUE: 07-25975

Application: Reporting - Actuate

Description: Labels on queries are not updated in Actuate after being
updated in Maximo.

APAR: IZ05779

ISSUE: 07-25930

Application: Reporting - Actuate

Description: The Open Work Orders and PM report displays sites to which
the user does not have
access.

APAR: IZ04753

ISSUE: 07-24909

Application: Reporting - Actuate

Description: Unable to add single quotation marks to report parameters.

APAR: IZ04739

ISSUE: 07-24906

Application: Reporting - Actuate

Description: Maximo opens multiple screens when printing a report.

APAR: IZ03294

ISSUE: 07-23117

Application: Reporting - Actuate

Description: Failure Hierarchy Report generates no information with
French data.

APAR: IZ02715

ISSUE: 07-22168

Application: Reporting - Actuate

Description: Reports show GMT time instead of local time if run using
the Direct Print icon.

APAR: IZ02626

ISSUE: 07-21954

Application: Reporting - Actuate

Description: Print with attachments selection printing all attachments
when only some are selected.

APAR: IZ02451

ISSUE: 07-21780

Application: Reporting - Actuate

Description: Incorrect current balance values.

APAR: IZ01954

ISSUE: 07-21308

Application: Reporting - Actuate

Description: Labor Utilization Report will not report hours for the

first of that month if that is also the start date.

APAR: IZ01877

ISSUE: 07-21100

Application: Reporting - Actuate

Description: RSSE coding issue when adding more than 100 groups.

APAR: None

ISSUE: 06-17189

Application: Request for Quotations

Description: A canceled PR appears in RFQ Lines when the PR number appears in two sites.

APAR: None

ISSUE: 06-15658

Application: Request for Quotations

Description: RFQLINE.PONUM and RFQLINE.POLINENUM cannot be updated if you delete multiple lines from the Purchase Order created from the Request for Quotation.

APAR: IZ11958

ISSUE: 07-30460

Application: Request for Quotations

Description: Cursor does not move sequentially from field to field.

APAR: IZ08286

ISSUE: 07-28334

Application: Request for Quotations

Description: Status appears incorrectly.

APAR: None

ISSUE: 07-15612

Application: Routes

Description: Not all job plans are found when performing an advanced

search.

Description: When downloading assets to Excel, the wrong asset number is saved if the asset contains a hyphen.

APAR: None

ISSUE: 07-16972

Application: System – User Interface

Description: A new row is inadvertently created when tabbing out from
the Hours field.

APAR: None

ISSUE: 07-15975

Application: System – User Interface

Description: Application Link does not function correctly if user does
not have access to original application.

APAR: None

ISSUE: 07-15469

Application: System – User Interface

Description: Inability to save unless you select Save twice or tab out
of the field.

APAR: None

ISSUE: 07-15019

Application: System – User Interface

Description: After finding a record and choosing a sub-tab, selecting
Download generates an error or displays incorrect results.

APAR: None

ISSUE: 07-14997

Application: System – User Interface

Description: Cannot set default to enable the Editable check box when
creating a row.

APAR: None

ISSUE: 07-14941

Application: System – User Interface

Description: Read only Date and Time fields can be changed through the

calendar.

APAR: None

ISSUE: 07-14808

Application: System – User Interface

Description: Tooltip/Field hint provides incorrect information.

APAR: None

ISSUE: 07-13843

Application: System – User Interface

Description: Internal server error appears when downloading in Excel.

APAR: None

ISSUE: 07-13105

Application: System – User Interface

Description: Two debug windows appear when "&debug=1" is appended to the
end of a URL address.

APAR: None

ISSUE: 07-12312

Application: System – User Interface

Description: When special characters are used in the description of a
record and the download link is selected, data is not being included in
the download or is incorrect.

APAR: None

ISSUE: 07-11947

Application: System – User Interface

Description: Clicking Clear on Advanced Search screens initiates a
search.

APAR: None

ISSUE: 07-10772

Application: System – User Interface

Description: Characters in selected languages display incorrectly.

APAR: None

ISSUE: 06-18025

Application: System – User Interface

Description: Issues related to selecting Enter key on filtered data.

APAR: None

ISSUE: 06-17719

Application: System – User Interface

Description: Maximo does not have multiple tab capabilities.

APAR: None

ISSUE: 06-17715

Application: System – User Interface

Description: Calendar control does not toggle properly.

APAR: None

ISSUE: 06-13649

Application: System – User Interface

Description: In large databases, the download button causes the generation of one MBO per row. The system runs out of memory.

APAR: None

ISSUE: 94249

Application: System – User Interface

Description: Error results from a large number of location records.

APAR: IZ16681

ISSUE: 08-13211

Application: System – User Interface

Description: If you press Tab too quickly or for too long a duration, the system will tab endlessly between fields.

APAR: IZ14876

ISSUE: 08-11970

Application: System – User Interface

Description: After installing hot fix 01142008, unable to copy and paste in long description.

APAR: IZ14246

ISSUE: 08-11544

Application: System – User Interface

Description: When the GL account number is too long to display in the GL account field, the wrong labor value appears when you hover over the field.

APAR: IZ14031

ISSUE: 08-11392

Application: System – User Interface

Description: Line break is removed at multiline text box after installing hot fix build 12112007.

APAR: IZ13682

ISSUE: 08-11095

Application: System – User Interface

Description: Unable to copy and paste into fields using the context menu commands.

APAR: IZ13136

ISSUE: 08-10886

Application: System – User Interface

Description: Tabbing sequence does not allow changes to minutes section of Target Start field in Work Order Tracking.

APAR: IZ12664

ISSUE: 08-10509

Application: System – User Interface

Description: System does not validate text or accept pasted text after applying hot fix 6.2.1.

APAR: IZ12518

ISSUE: 08-10414

Application: System – User Interface

Description: Hours appears as "00" instead of "12" in time field during 12:00 hour.

APAR: IZ12263

ISSUE: 08-10231

Application: System – User Interface

Description: Cannot download a table to Excel format, if a table has previously been downloaded.

APAR: IZ11946

ISSUE: 07-30453

Application: System – User Interface

Description: Installation of hot fix removes line breaks from long description.

APAR: IZ11946

ISSUE: 07-30453

Application: System – User Interface

Description: Installation of hot fix removes line breaks from long description.

APAR: IZ11455

ISSUE: 07-30375

Application: System – User Interface

Description: Long descriptions are not saved after applying Release 6.2.1 hot fix.

APAR: IZ10762

ISSUE: 07-29948

Application: System – User Interface

Description: Different where clauses for field security information rows are not allowed.

APAR: IZ10698

ISSUE: 07-29937

Application: System – User Interface

Description: User not allowed to move from tab to tab in Workflow process.

APAR: IZ10022

ISSUE: 07-29622

Application: System – User Interface

Description: Inadvertent read only message appears after applying hot fix 6.2.1.

APAR: IZ10020

ISSUE: 07-29615

Application: System – User Interface

Description: System reverts to table detail of a different row than the one the user saves.

APAR: IZ10040

ISSUE: 07-29614

Application: System – User Interface

Description: Search no longer functions after applying hot fix 6.2.1.

APAR: IZ10025

ISSUE: 07-29613

Application: System – User Interface

Description: User must click twice to save text box edit.

APAR: IZ10014

ISSUE: 07-29612

Application: System – User Interface

Description: Incorrect field updated when new data is entered.

APAR: IZ09575

ISSUE: 07-29284

Application: System – User Interface

Description: System does not retain Where clause information when conducting an advanced search.

APAR: IZ09506

ISSUE: 07-29234

Application: System – User Interface

Description: When you create a communication and attach a file, that file does not appear in the attachments list.

APAR: IZ09722

ISSUE: 07-29423

Application: System – User Interface

Description: After installing hot fix 6.2.1 112007, the value inserted in the Details field of a Service Request disappears if you refresh the screen.

APAR: IZ09558

ISSUE: 07-29233

Application: System – User Interface

Description: Bookmarks do not work when the USER ID does not match the LOGIN ID.

APAR: IZ09293

ISSUE: 07-29078

Application: System – User Interface

Description: System creates a row when user tabs away from the last text box.

APAR: IZ09289

ISSUE: 07-29075

Application: System – User Interface

Description: Actions, such as clicking OK, must be performed multiple times to take effect.

APAR: IZ09316

ISSUE: 07-29114

Application: System – User Interface

Description: After applying hot fix 6.2.1 112007 to 6.2.1, a problem results with the security groups in the Mobile application.

APAR: IZ09222

ISSUE: 07-29021

Application: System – User Interface

Description: After applying hot fix, lookups do not function correctly in Aviation application.

APAR: IZ09075

ISSUE: 07-28929

Application: System – User Interface

Description: Tab action does not work correctly in Date field of calendar lookup.

APAR: IZ09091

ISSUE: 07-28933

Application: System – User Interface

Description: System hangs up with large number of asset or location records.

APAR: IZ07859

ISSUE: 07-28034

Application: System – User Interface

Description: Shortcut keys CTRL+ and CTRL- do not work for changing a date in localized German database.

APAR: IZ07548

ISSUE: 07-27664

Application: System – User Interface

Description: After applying hot fix, the link from a notification e-mail does not open the correct record.

APAR: IZ07421

ISSUE: 07-27578

Application: System – User Interface

Description: You must click OK twice to save record.

APAR: IZ07136

ISSUE: 07-27270

Application: System – User Interface

Description: Search functionality does not work properly.

APAR: IZ06854

ISSUE: 07-27106

Application: System – User Interface

Description: "JAVA.NET.MALFORMEDURLEXCEPTION IN LOGOUT_JSPSERVICE" error message appears.

APAR: IZ06795

ISSUE: 07-27034

Application: System – User Interface

Description: The TABTYPE domain contains a value that is longer than the length of the domain.

APAR: IZ05692

ISSUE: 07-25934

Application: System – User Interface

Description: System deletes data row after you enter information and tab away from the field.

APAR: IZ05463

ISSUE: 07-25652

Application: System – User Interface

Description: Selecting Tab key inadvertently deletes a row.

APAR: IZ04822

ISSUE: 07-24976

Application: System – User Interface

Description: If you disable Route Workflow for a group, it still appears in the application.

APAR: IZ04584

ISSUE: 07-24574

Application: System – User Interface

Description: When downloading data to an Excel Spreadsheet, not all data is carried over.

APAR: IZ04229

ISSUE: 07-24291

Application: System – User Interface

Description: Original values return to time fields after these values are deleted.

APAR: IZ04202

ISSUE: 07-24279

Application: System – User Interface

Description: Tabbing between the textbox and check box causes the check box to change its value.

APAR: IZ04195

ISSUE: 07-24275

Application: System – User Interface

Description: Download function does not work on Select Value lookups.

APAR: IZ03730

ISSUE: 07-23565

Application: System – User Interface

Description: After applying hot fixes, the keyboard interaction function
no longer works.

APAR: IZ02492

ISSUE: 07-21802

Application: System – User Interface

Description: Database error number 907 appears indicating that a right
parenthesis is missing.

APAR: IZ02446

ISSUE: 07-21707

Application: System – User Interface

Description: Formatting of long description text does not carry over
when exporting table data to Excel.

APAR: IZ02222

ISSUE: 07-21530

Application: System – User Interface

Description: After applying hot fix, client has problem creating new
rows on applications tab.

APAR: IZ01651

ISSUE: 07-20766

Application: System – User Interface

Description: After applying hot fix 6.2.1 and rebuilding the ear files,
a split screen appears with two JSP errors.

APAR: IZ00733

ISSUE: 07-19389

Application: System – User Interface

Description: Query executes after pressing the Clear button.

APAR: IZ09289

ISSUE: 06-19196

Application: System – User Interface

Description: Must click some buttons twice when performing certain tasks, such as adding an item to a storeroom.

APAR: None

ISSUE: 07-19714

Application: Tag Outs/Lock Outs

Description: Unnecessary records generated when duplicating the tag out record.

APAR: None

ISSUE: 07-10412

Application: Translation

Description: Values in the NumericDomain table cannot be translated.

APAR: IZ05000

ISSUE: 07-25049

Application: Translation

Description: In Korean language, when a user tries to see a work log in the Incident or Problem application, no data are displayed in the Work Log tab.

Application: Work Order Tracking

Description: System fails to save work order and displays message,
"Work order already exists."

APAR: IZ05058

ISSUE: 07-25223

Application: Work Order Tracking

Description: Issue regarding completing work orders.

APAR: IZ04738

ISSUE: 07-24905

Application: Work Order Tracking

Description: Issue related to crossover of information from job plan to work plan.

APAR: IZ04661

ISSUE: 07-24795

Application: Work Order Tracking

Description: Installed hot fix 07-13843 has caused issue with attaching a job plan to a work order.

APAR: IZ04042

ISSUE: 07-24099

Application: Work Order Tracking

Description: When entering planned material, the item description remains read-only when line type is special order.

APAR: IZ03853

ISSUE: 07-23863

Application: Work Order Tracking

Description: Parent appears incorrectly when the same WONUM is used at different sites.

APAR: IZ03499

ISSUE: 07-23347

Application: Work Order Tracking

Description: The Has Children flag does not update when tasks are removed from the work order.

APAR: IZ02597

ISSUE: 07-21844

Application: Work Order Tracking

Description: Maximo 6.x Hazard application does not support multiple organizations.

APAR: IZ01735

ISSUE: 07-20772

Application: Work Order Tracking

Description: When you deleted a child using the table window, the child's children are not deleted.

APAR: IZ01714

ISSUE: 07-20771

Application: Work Order Tracking

Description: WORKORDER.STATUSDATE updates incorrectly when you attempt to close a work order on a date that occurs in the future.

APAR: IZ01033

ISSUE: 07-19842

Application: Work Order Tracking

Description: The application restriction on the Application Designer does not work.

APAR: IZ10198

ISSUE: 07-10199

Application: Work Order Tracking

Description: In Oracle, Maximo loses a database connection every time the Print Work Orders check box is selected on the Change Work Order Status dialog box.

APAR: IZ16662

ISSUE: 06-13670

Application: Work Order Tracking

Description: Select Value value list is empty for Failure Class field.

APAR: None

ISSUE: 07-17193

Application: Work View

Description: When selecting View Work Order and PMs from child detail
menu, the record appears incorrectly.

The following issues were resolved for Maximo Asset Management v6.2.1

ISSUE: 06-19513

Application: Assets

Description: Meter reading erroneously rolling down to *former* CHILD
even when reading date > move to null PARENT' date (See LD...).

ISSUE: 06-19258

Application: Assets

Description: Cannot Enter Meter Readings in Assets (Cal) without
Read Access to Core Assets application.

ISSUE: 06-18655

Application: Chart of Accounts

Description: "The date is not within a valid financial period" on
receipt when validate financial periods is cleared in chart of accounts.

ISSUE: 06-17717

Application: Chart of Accounts

Description: You get error "The GL Account is required for the holding
location for this site" when receiving an item even with GL validation
deactivated.

ISSUE: 06-19342

Application: Classifications

Description: Classification shows all items regardless of the

site/org/itemset of the item.

ISSUE: 06-19949

Application: Classifications

Description: Need the ability to increase/change the length of the
Assetspec.alnvalue to be greater than 25 characters.

ISSUE: 06-15555

Application: Classifications

Description: Cannot select top-level node in classification drilldown
utility when attempting to select a classification for record querying.

ISSUE: 06-16029

Application: Configuration

Description: Cannot change autokeyname for a view attribute. Works fine
for table attributes.

ISSUE: 07-10166

Application: Configuration

Description: You get error "More than one attribute has Primary Key
equal to 1" when increasing length of Description field.

ISSUE: 06-20959

Application: Create Service Request

Description: Unable to create service request. You get database error
when 'submit' button is clicked.

ISSUE: 06-15168

Application: Electronic Audit

Description: You cannot enable e-audit for internal tables (like domains)
which means that you cannot audit values being added/removed for domains.

ISSUE: 06-19311

Application: E-mail Listener

Description: E-mail with attachment fails to get processed by
E-mail Listener.

ISSUE: 06-20604

Application: E-mail Listener

Description: Maximo does not create Service Request when sending emails with attached file with accent in the name of the file.

ISSUE: 06-16442

Application: Inventory

Description: When you issue to a work order that has a value for FINCNTRLID from Inventory, the value is not populated in the matusetrans table.

ISSUE: 06-19383

Application: Inventory

Description: Prorated Service line with invoice variance does not calculate average cost correctly for Inventory items.

ISSUE: 06-20297

Application: Inventory

Description: The purchased item tax amount will not add to average cost correctly if you do not add the item to the storeroom.

ISSUE: 06-21098

Application: Inventory

Description: Incorrect New Cost in Cost of Inventory Adjustment for item with 0 cost.

ISSUE: 06-15771

Application: Inventory

Description: Deleted items from reorder report are not removed when the reorder report is run again (invpurch_act.rox).

ISSUE: 06-83673

Application: Inventory Issue

Description: When backdating transactions such as an Issue or a Labor Reporting, no choice is given as to whether the next or current financial

period should be used.

ISSUE: 06-19551

Application: Inventory Issue

Description: You get the error "The Balance in this Bin will become negative as a result of this transaction" when issuing a Rotating asset.

ISSUE: 06-20568

Application: Inventory Issue

Description: Inability to open issues and transfer application on SQL Server 2000 SP4 with large number of location records (over >80000).

ISSUE: 06-20981

Application: Inventory Issue

Description: Issuing a reserved Tool to task work order Actual Financial

Transactions cannot be reported because the Accepts Charges flag is set to no.

ISSUE: 06-18543

Application: Inventory Issue

Description: "Please enter a requisition line that already exists" Item cannot be issued if requesting location that belongs to a different site using Desktop Requisition.

ISSUE: 06-18445

Application: Invoices

Description: Client finds invoice without a PO if due date is populated and no service receipt is written to the servrectrans table.

ISSUE: 06-18587

Application: Invoices

Description: Invoices - Direct Issue are not setting EnteredAsTask properly on Invoicecost and MATUSETRANS tables.

ISSUE: 06-19680

Application: Invoices

Description: Invoices - Distribute Costs - Invoice Match records are not being generated for Invoice Cost Lines with same GL & WO as Line 1.

ISSUE: 06-21002

Application: Invoices

Description: Invoice application - Getting error 'Specified object not found' when typing in PO value under invoice tab in PO details.

ISSUE: 07-10078

Application: Invoices

Description: INVOICETRANS not getting updated for invoices created by Pay on Receipt POs.

ISSUE: 06-15460

Application: Invoices

Description: Invoices - Distribute Costs are not handling rounding errors for Taxes & Prorated Costs.

ISSUE: 06-17235

Application: Item Master

Description: Item Master - Item Assembly Structure tab - Belongs To description incorrectly displayed as you move up the hierarchy.

ISSUE: 06-19168

Application: Item Master

Description: Maximo should support Condition Code Enabled Items in IAS.

ISSUE: 06-20395

Application: Job Plan

Description: You get the error "Database Error 907 has Occurred ORA-00907: Missing Right Parenthesis" or "ORA-00933: SQL Command Not Properly Ended" when attempting to delete a Job Plan Task whose Task ID is over 1000.

ISSUE: 06-19394

Application: KPI Manager

Description: For WebSphere system, square characters display instead of correct Chinese text on KPI chart if KPIMAIN.DESCRIPTION's value includes Chinese.

ISSUE: 06-17829

Application: Locations

Description: You get the error "You have encountered an implementation or customization problem" when attempting to search for a GL Account from within the Locations application.

ISSUE: 06-11836

Application: Master PM

Description: Meter information is not copied from Master PM to associated PM on patch 4 build 100.

ISSUE: 06-20626

Application: Maximo Enterprise Adapter

Description: Maximo Enterprise Adapter permits inbound issues to closed work orders.

ISSUE: 06-19959

Application: Person Groups

Description: You get "Out Of Memory" error when assigning a workflow delegate to a person record.

ISSUE: 06-20621

Application: Person Groups

Description: You get error "An Unknown Error Has Occurred.
Please Contact Your System Administrator For Assistance. Null" when attempting to make changes to a Person Record with the hot fixes for issues 06-19959 and 06-16492 applied to a 6.0.03 environment.

ISSUE: 06-19232

Application: Purchase Contracts

Description: Data is not crossing over using a crossover domain from Purchase Contracts to Purchase Orders.

ISSUE: 06-19252

Application: Purchase Contracts

Description: Users need write permission on Contracts for Release PO Creation.

ISSUE: 06-17632

Application: Purchase Orders

Description: You get error ORA-00001: unique constraint (MAXIMO.INVVEND_NDX1) violated.

ISSUE: 06-18027

Application: Purchase Orders

Description: PO cannot be approved when CATALOG number is modified. The system throws an index violation against the INVVENDOR table.

ISSUE: 06-21470

Application: Purchase Orders

Description: Canceled PR with same PRNUM showing on the Copy PRLines to PO dialog box.

ISSUE: 06-20636

Application: Purchase Requisitions

Description: You get the error that Vendors details on the contract do not match the vendor specified on the PR/PO when trying to associate a contract to a PR.

ISSUE: 06-12497

Application: Receiving

Description: MATRECTRANS.ACTUALCOST and MATRECTRANS.UNITCOST are not calculating correctly upon receipt if Conversion factor is > 1 on the PO. This value should be expressed in terms of the inventory issue cost.

ISSUE: 06-19554

Application: Receiving

Description: Inspection status is changed to COMP before the rotating item is actually received.

ISSUE: 06-19582

Application: Receiving

Description: The TOSTORELOC and FROMSTORELOC columns become null when an item is returned.

ISSUE: 06-20892

Application: Receiving

Description: Po Lines with a quantity of 1 not taking exchange rate into account.

ISSUE: 06-20915

Application: Receiving

Description: Material Receipt and Inspection Required GL Problem.

ISSUE: 06-17451

Application: Receiving

Description: Rounding of the unit cost field when calculated from linecost/quantity causes receipts and invoicing not to match PO when linecost=qty*unitcost (rounded).

ISSUE: 06-19626

Application: Reorder

Description: You get error "An unknown error has occurred.
Please contact your system administrator for assistance.null" when running reorder.

ISSUE: 06-20694

Application: Reorder

Description: Reorder Direct issue picking up the wrong Site ID.

ISSUE: 06-11104

Application: Reorder

Description: Reorder Items Detail does NOT dismiss when running the reorder in background.

ISSUE: 06-19199

Application: RFQ

Description: Quotations tab - after copying RFQ lines, if you do not save the record and enter a unit cost, unit is deleted upon save.

ISSUE: 06-15619

Application: Reporting - Actuate Reports

Description: Work Order Details report does not display long descriptions for a selection of WOs in SQL Server (woprint_act.rox).

ISSUE: 06-19547

Application: Reporting - Actuate Reports

Description: Work Order Details (woprint_act.rox) - dates in header do not adjust for users time zone (applies to other reports, too).

ISSUE: 06-20468

Application: Security Groups

Description: Problem with "Independent of other groups" function in the group.

ISSUE: 06-17833

Application: Service Desk

Description: Database error number 170 has occurred... incorrect syntax near 'and' when creating new row against an activity.

ISSUE: 06-20558

Application: Service Requests

Description: A removed asset is carried over from an SR when creating work order from the SR.

ISSUE: 06-20459

Application: System

Description: Apop queries all records when return to list tab after insert record and save - slow performance on SQL Server.

ISSUE: 06-19444

Application: System User Interface

Description: Missing check boxes on lookups.

ISSUE: 06-16457

Application: System User Interface

Description: Failure type does not carry over to Failure Reporting tab.

ISSUE: 06-17166

Application: Terms and Conditions

Description: Descriptions and Long Descriptions are editable on terms set to be NOT editable.

ISSUE: 06-19535

Application: Workflow

Description: Records are moving through Wait nodes with event =maximo.sr.statuschange.* on any update to the SR, not just status changes.

ISSUE: 06-19204

Application: Workflow Designer

Description: Expression Builder in Workflow Designer has no OK or Cancel button.

ISSUE: 06-19433

Application: Work Order Tracking

Description: In Edit Work History, you cannot use Select buttons for Labor / Material / tool buttons when updating Actuals in Edit Work History (Also see issue 06-19436).

ISSUE: 06-19257

Application: Work Order Tracking

Description: You cannot enter meter readings in Work Order Tracking (Cal) without read access to core Assets application.

ISSUE: 06-19784

Application: Work Order Tracking

Description: Issued rotating tool does not appear in WO Actuals Tools subtab.
