

Documentation Update for APAR IZ43948:

Symptom:

In the ITIM V4.6 Database and Schema Reference, the POLICYVIOLATIONS field in RECONCILIATION table is not explained in detail.

Note:

The section 2.5.16 of IBM Tivoli Identity Manager Database and Schema Reference Version 4.6 will be updated as below in a future version.

2.5.16 RECONCILIATION table

This table contains the summary of the information for reconciliation on various service instances. The table contains an entry for all completed reconciliations on various service instances.

| Column Name | Description | Data Type |
|-------------------|---|-----------|
| RECONID * | An identifier that identifies a reconciliation uniquely. | varchar |
| ServiceDN | The DN of the service for which this entry is recorded. | varchar |
| ProcessedAccounts | The number of processed accounts for this service instance, during last runs of reconciliation. | int |
| LocalAccounts | The number of New Local Accounts created for this service instance. | int |
| TimUserAccounts | The number of accounts for this service instance, which also hold Tivoli Identity Manager accounts. | int |
| PolicyViolations | <p>Number of accounts for which policy violations were found during this reconciliation. This value is incremented only when one or more attribute values of the account on the remote resource are different from the attribute values of the local account and any attribute value of the account on resource is non-compliant according to the provisioning policies defined in ITIM.</p> <p>If the account on the remote resource and the local account are the same (all attribute values are the same), any non-compliant attribute values will not result in the POLICYVIOLATIONS field being incremented.</p> | int |
| STARTED | Time when reconciliation started. | timestamp |
| COMPLETED | Time when reconciliation completed. | timestamp |

* Indicates that the column is part of the primary key of this table
