

Collaborate, communicate and integrate with IBM software.

The **IBM Lotus Notes® and Lotus® Domino®** platform provides e-mail, calendaring and collaboration applications to help people effectively share and manage information.

Use it on its own or with these complementary products to help your business “stay on the same page,” save time and stay in control:

- **IBM Lotus Sametime®** software. Expands Lotus Domino collaboration with Web conferencing and advanced instant messaging features to help people connect without leaving the Lotus Notes desktop. (Lotus Notes license includes chat and presence awareness only.)
- **IBM Lotus Connections** software. Enables you to access and manage activities without leaving the Lotus Notes desktop, helping you better track and share tasks and to-do lists.
- **IBM Lotus Quickr™** software. Provides a rich set of content and team services to help you share content and collaborate with your teams. Users can save Lotus Notes attachments to Lotus Quickr content libraries, saving e-mail server space.
- **IBM Lotus Forms** software. Delivers XML forms with multiple signature capabilities, integrating with the Lotus Domino database and workflow capabilities.
- **IBM WebSphere® Portal** software. Adds to the Lotus Notes and Domino composite applications capability by delivering composite applications to both rich clients and browser clients, as well as to portals without modification, helping you quickly connect employees, partners and vendors, regardless of their client technology.

IBM Lotus Sametime software has marketplace-leading, award-winning enterprise instant messaging and Web conferencing capabilities—as well as built-in VoIP—which provide organizations of any size with new ways to work together across time zones and locations. The cornerstone of the IBM UC²™ strategy, Lotus Sametime software can help reduce business cycles and travel burdens, and can help businesses keep pace with their realtime work environments.

Use it on its own or with these complementary products to help your business stay on the same page, save time and stay in control:

- **IBM Lotus Notes and Domino** software. Integrate with Lotus Sametime software to provide online awareness for Lotus Domino software-based applications, so people can be “injected” into any Lotus Notes software- or browser-based Lotus Domino application.
- **IBM Lotus Quickr** software. Provides Lotus Sametime users with an online team place to share content. A connector provides the ability to drag and drop files from Lotus Quickr content libraries into Lotus Sametime chat sessions without having to leave the Lotus Sametime application.
- **IBM Lotus Connections** software. Provides social software, which can work with Lotus Sametime software to inject people and realtime collaboration into communities and blogs, helping reduce business cycles and foster innovation.
- **IBM WebSphere Portal** software. Delivers a point of personalized interaction with applications, content, processes and people, including access to Lotus Sametime functions. Lotus Sametime software is also a component of IBM® Collaboration Accelerator for WebSphere Portal software.

IBM WebSphere Portal software enables personalized interaction with applications, content, processes and people, allowing users to interact with their businesses in a more efficient way.

Use it on its own or with these complementary products to help your business stay on the same page, save time and stay in control:

- **IBM Lotus Notes and Domino** software. Provide an e-mail and collaboration environment, which can be easily integrated into a WebSphere Portal environment using a variety of Lotus Notes and Domino software-specific portlets.
- **IBM Lotus Forms** software. Provides an electronic-forms front end to WebSphere Portal software to help companies accelerate business process automation and data integration.
- **IBM® accelerators for WebSphere Portal** software. Provide software targeted to specific portal-based line-of-business projects. These offerings snap on to WebSphere Portal software to speed solution development.
 - **IBM® Dashboard Accelerator**
 - **IBM® Self-Service Accelerator**
 - **IBM® Content Accelerator**
 - **IBM Collaboration Accelerator**
 - **IBM® Enterprise Suite Accelerator**

IBM Lotus Quickr software enables collaboration by providing online team places where people can share content and collaborate to get work done more quickly.

Use it on its own or with these complementary products to help your business stay on the same page, save time and stay in control:

- **IBM Lotus Notes and Domino** software. Allow users to save attachments from Lotus Notes software directly into Lotus Quickr content libraries, saving e-mail server space.
- **IBM Lotus Sametime** software. Provides presence awareness, enterprise instant messaging and Web conferencing—built for business. Provides access to Lotus Quickr content directly in Lotus Sametime software for easy content sharing within a chat session.
- **IBM Lotus Connections** software. Provides social software to help businesses gather and exchange information through professional networks and build communities of experts who can then share Lotus Quickr content to help execute tasks more quickly.
- **IBM WebSphere Portal** software. Delivers a point of personalized interaction with applications, content, processes and people, including access to Lotus Quickr team spaces. Lotus Quickr software is also a component of IBM Collaboration Accelerator for WebSphere Portal software.

IBM Lotus Connections software is social software for business that helps empower you to be more innovative and helps you execute more quickly by using dynamic networks of coworkers, partners and customers.

Use it on its own or with these complementary products to help your business stay on the same page, save time and stay in control:

- **IBM Lotus Notes and Domino** software. Provide an activities sidebar plug-in (in Lotus Notes 8 software) that can access Lotus Connections components so your collaborative tasks and social networks are in one place.
- **IBM Lotus Sametime** software. Provides presence awareness, enterprise instant messaging and Web conferencing, which can work with Lotus Connections software to bring people and realtime capabilities to your social communities, to help you foster innovation and reduce business cycles.
- **IBM WebSphere Portal** software. Delivers a point of personalized interaction with applications, content, processes and people, including access to Lotus Connections software. Capable of accessing Lotus Connections components via portlets, so your portal-based applications and social networks can leverage one another. Lotus Connections software is also a component of IBM Collaboration Accelerator for WebSphere Portal software.
- **IBM Lotus Quickr** software. Provides online team places, where people can share content and collaborate to get work done more quickly. Team members can leverage the knowledge and people in their Lotus Connections communities or use profiles to help find experts to fill knowledge gaps.

IBM Lotus Forms software provides a dynamic front end to business processes, making it easier for users to capture and integrate forms data with existing IT systems.

Use it on its own or with these complementary products to help your business stay on the same page, save time and stay in control:

- **IBM WebSphere Portal** software. Delivers a point of interaction with applications, content (including electronic forms), processes and people. Provides an environment for further leveraging data captured via Lotus Forms software and allows users to more efficiently complete and process forms data online or offline.
- **IBM Lotus Notes and Domino** software. Provide a collaborative application platform, with robust workflow support, document-centric storage, online and offline usage, search capabilities, archiving, and granular security for business processes, which are increasingly forms based.
