**Work more easily, connect with colleagues more quickly
and reduce information overload.**

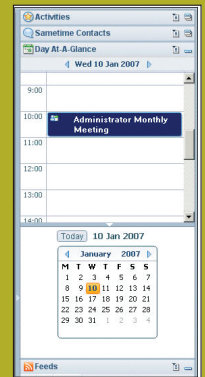

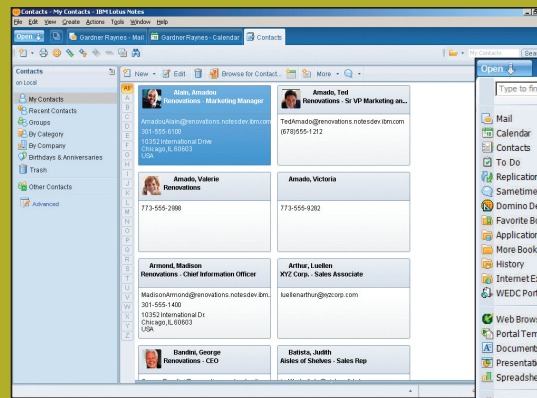

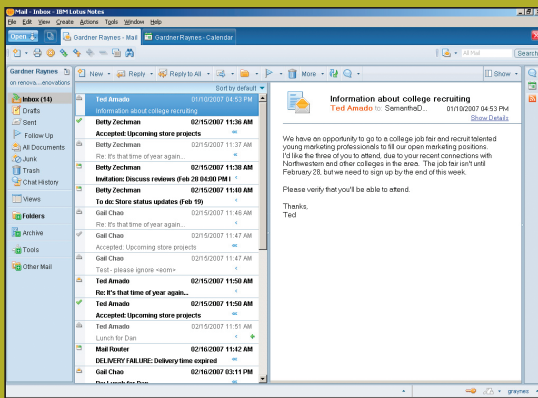

IBM Lotus Notes 8 software

More than just e-mail, calendars and contacts: IBM Lotus Notes® software

Lotus Notes 8 software helps your organization access information more easily, work more productively and collaborate more effectively than ever before. It's a collaborative business tool that supports your ability to focus on what matters most to your business: innovation. How? Through innovative functionality and an intuitive, compelling user experience.

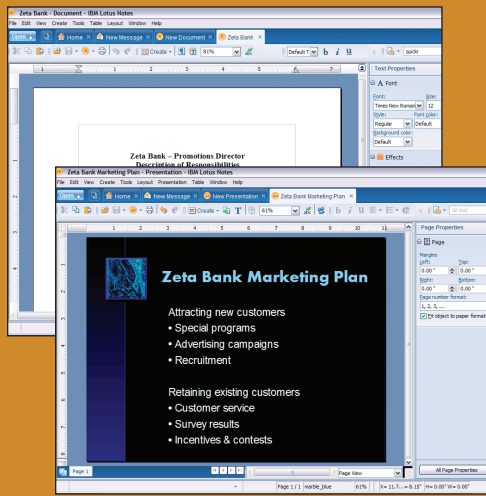

It helps you boost productivity

Not just for e-mail and scheduling, Lotus Notes 8 software introduces new capabilities like composite applications, office productivity tools, Really Simple Syndication (RSS) feeds, activity-centric computing—and more. A new side shelf allows you quick access to all the tools, applications and information you use most frequently. All brought together in an intuitive interface, so you can easily navigate features and stay focused and productive.

It brings all your critical applications together

Lotus Notes 8 software makes it easier to integrate line-of-business solutions and data into new types of applications called composite applications—mash-ups of many applications that present content from multiple systems in a single context. By bringing interactive and collaborative tools into the context of the processes and applications you and your employees use every day, composite applications help improve your effectiveness. They also enable you to leverage and extend your existing assets with increasing degrees of flexibility and agility.

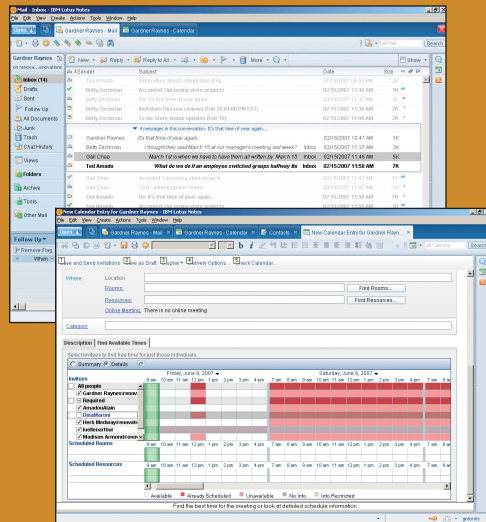

It gives you office productivity tools

Lotus Notes 8 software comes with an integrated suite of productivity tools that you can access from a central location. These productivity tools allow you to create, edit and collaborate on a wide variety of file types, including word-processing documents, spreadsheets and presentations. By providing support for OpenDocument Format (ODF), the IBM productivity tools can import and edit Microsoft® Office documents and export those documents to ODF for sharing with ODF-compliant applications and solutions. And that can help keep you from becoming locked-in to any one vendor's proprietary technology.

It delivers intelligent e-mail and calendaring

Taking productivity to the next level, IBM Lotus Notes and Lotus® Domino® 8 software increases your efficiency with new, intelligent e-mail, calendaring and contact enhancements. Designed to support the way you work, it's almost as if Lotus Notes 8 software senses what you need before you need it. You save time, reduce mistakes and work smarter. It's everything you could ask for in a world-class collaboration solution and more!

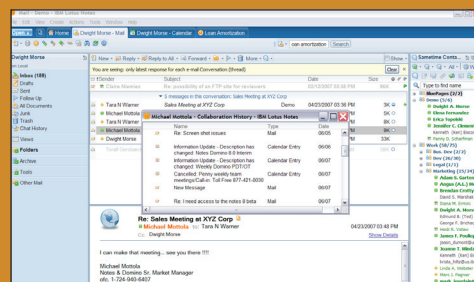

It helps you communicate easily

With Lotus Notes 8 software, you can instantly connect with your teams. Share expertise in real time through integrated instant messaging and presence awareness. Reduce e-mails and phone calls by quickly and easily collaborating with colleagues and other project participants inside and outside your organization—from a single user interface.

It lets you work when and where you want

Access your databases and collaborative tools whether you're connected to the network or working offline. Lotus Notes replication technology helps you get what you need quickly when working offline by replicating e-mail and applications with data, logic and security controls. So you can be as productive as possible—regardless of location. You can even access your critical business information from personal digital assistants, such as RIM BlackBerry devices, with optional third-party software.

* Activity-centric computing requires an optional activities server.

It's intuitive

Lotus Notes 8 software features a redesigned and more intuitive interface, which lets end users work the way they want to. Access e-mail, documents and business applications in one place—with just one password to manage everything. Quickly find the information you need by previewing messages, vertically or horizontally, and by gathering and viewing threaded e-mails. View highlights in a monthly calendar to keep track of important meetings and appointments. Find contacts more quickly by using business card-like views with embedded photographs.

It's geared for your business

More than 130 million people have used IBM Lotus Notes and Domino software in both small and large businesses worldwide. Lotus Notes 8 software runs on Microsoft Windows® and Linux® operating systems—offering you a choice of client platforms. Lotus Notes and Domino 8 software provides you with a security-rich environment to keep you focused on your business, not on technical issues. And Lotus Notes and Domino 8 software is designed to be easy to use and to adapt as your business needs evolve.

For more information

A new architecture, new capabilities and enhancements to time-tested features make IBM Lotus Notes 8 collaboration software ideal for helping your organization increase productivity, work more efficiently and drive more revenue.
