Speaker: *Kevin Hosozawa*, Product Manager, Tivoli IT Asset Management Portfolio, IBM Software Group

Broadcast date: November 29, 2012, 11:00 a.m. EST / 4:00 p.m. GMT / UTC

Developed for: IT and enterprise architects and managers; system analysts and administrators; application programmers and managers; operations managers; and, project managers

Technical level: Intermediate

Do you have a single view into your total system, including storage and network? Or too many views? Are you looking for approaches to increase system availability and improve productivity?

Integrated Service Management provides visibility across your enterprise and focuses on assisting both business and IT in understanding what is going on within the data center. IBM® Tivoli® OMEGAMON® can monitor all the components of your z/OS® system. The value of having a single view into the z/OS system, storage and network is to improve your ability to find and fix problems quickly and to have a highly usable user interface for both business and IT.

Teleconference

Join us for this complimentary teleconference as we look at the processes, functionality and user interfaces available to assist in gaining improved visibility into what is going on in a z/OS environment. The OMEGAMON Management Suite V5.1 now includes all the V5.1 capabilities of the product family.
