

# ***Business Service Management (BSM) for Line of Business***

***Tivoli Business Automation***

***John Seyerle  
NE IOT BSM Technical Leader***

# Enabling Innovation with IBM Service Management

Visibility: *See your Business*

Control: *Govern your Business*

Automation: *Optimize your Business*

## ***Service Visibility, Control, and Automation is a must!***

*Vital to both business and IT operations:*

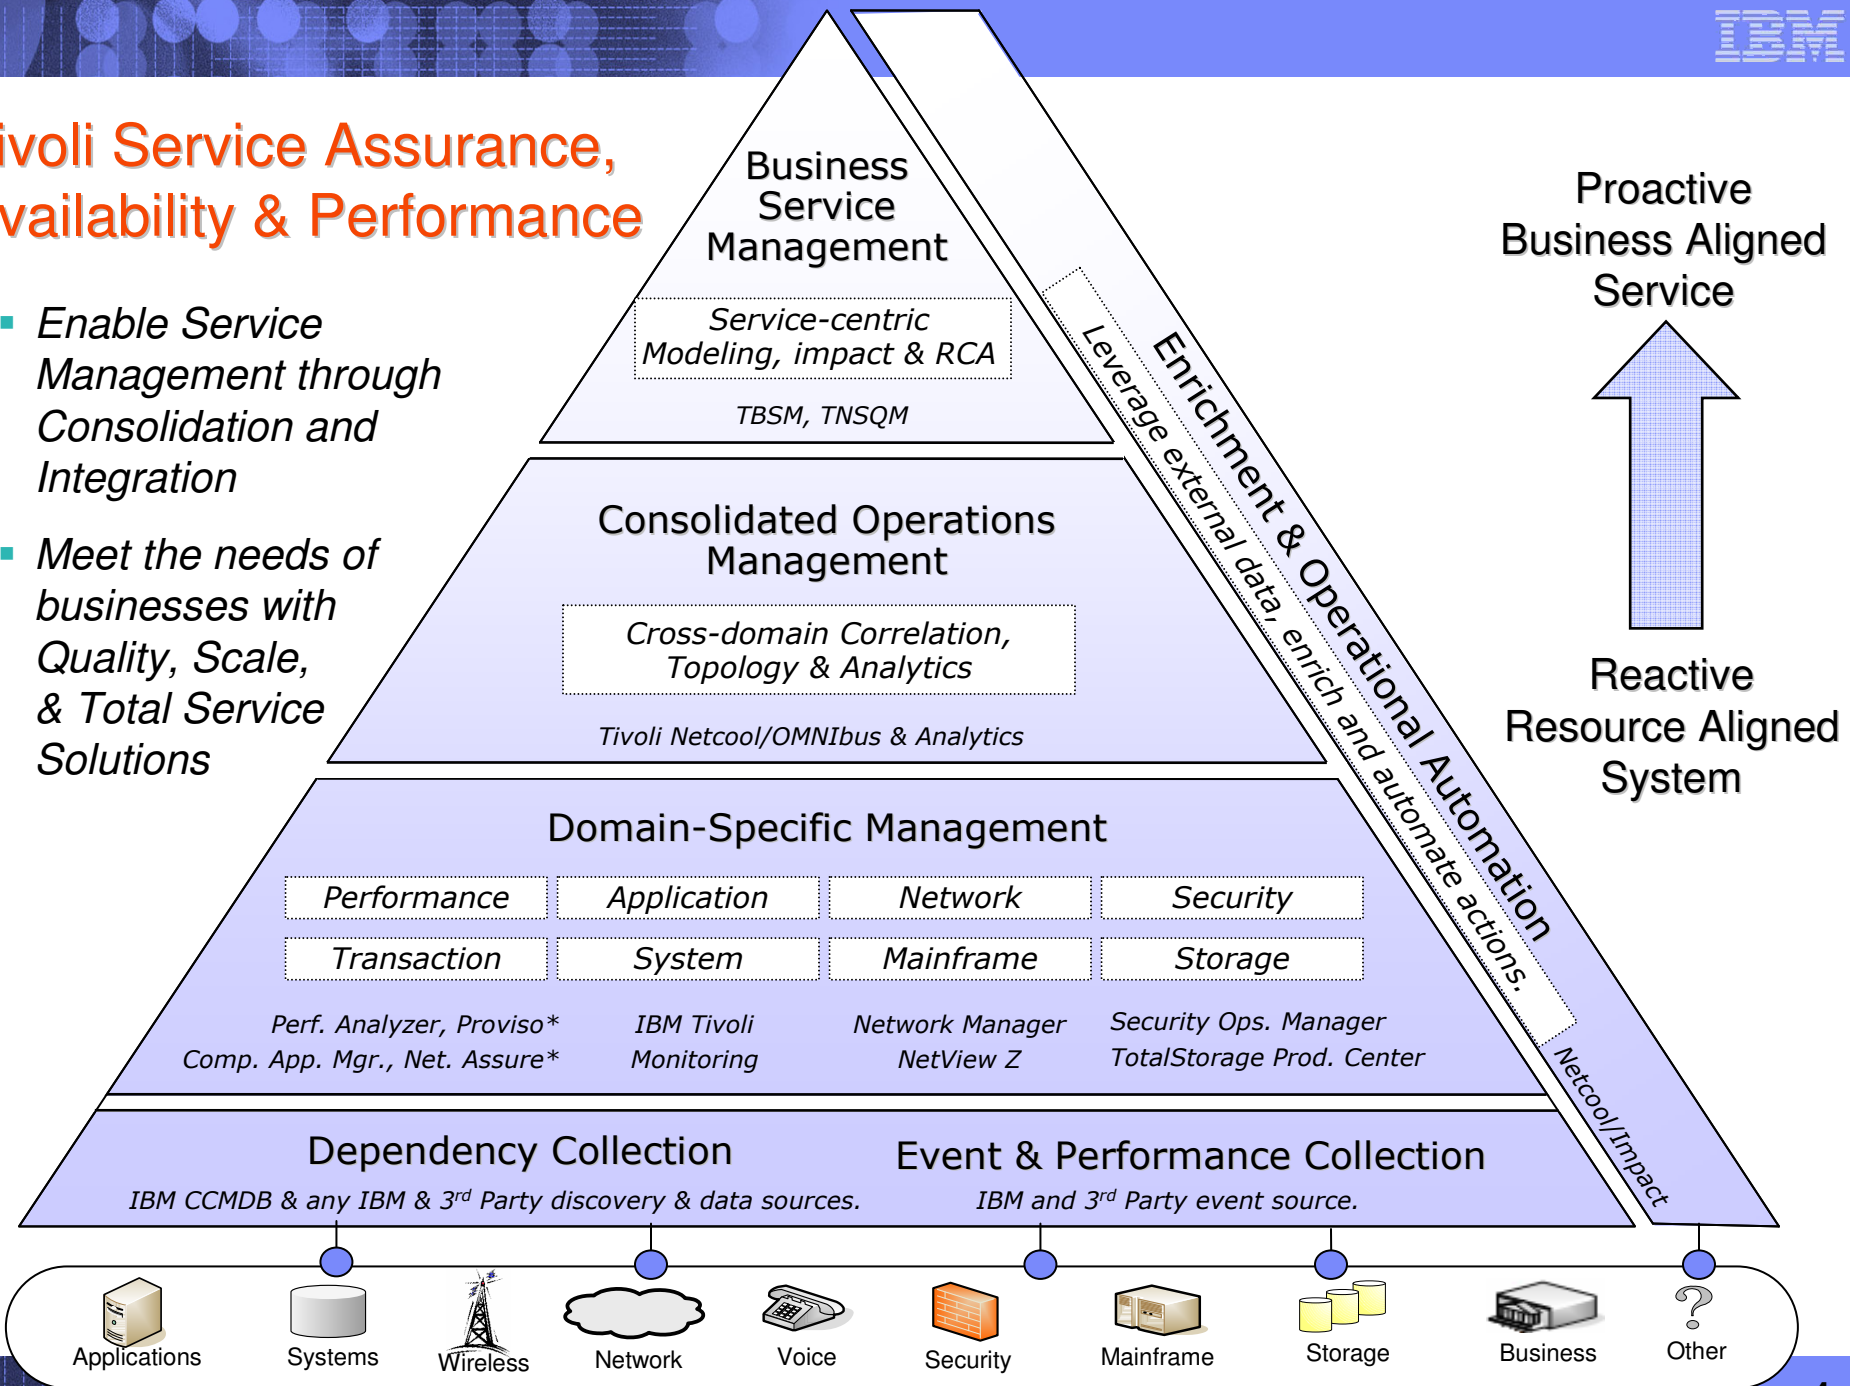

- ✓ Manage day-to-day business performance
- ✓ Gain insight into the operational health of services
- ✓ Track ongoing customer experience
- ✓ Make strategic business decisions & investments

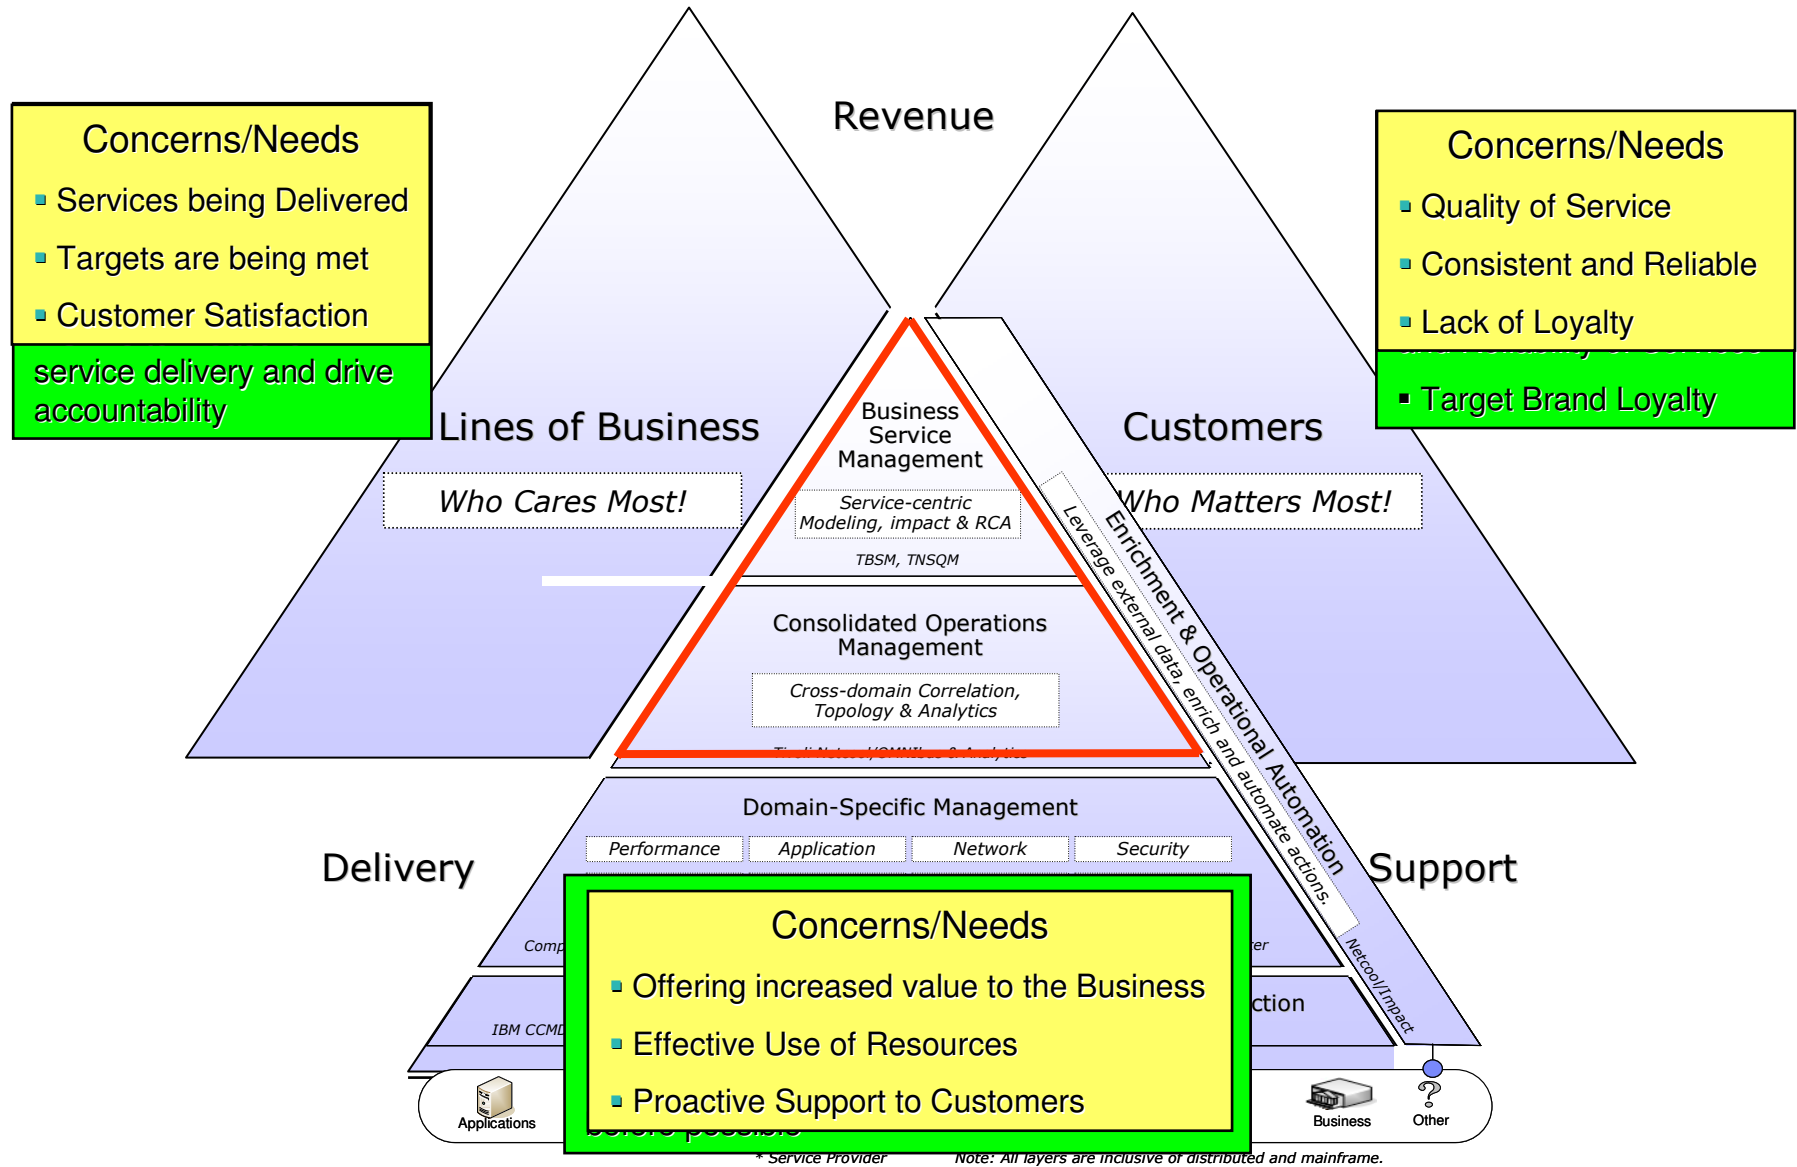

- ✓ Assure high service availability and performance
- ✓ Reduce costs & improve operational efficiency
- ✓ Deliver against line of business requirements
- ✓ Make long-term IT investment decisions

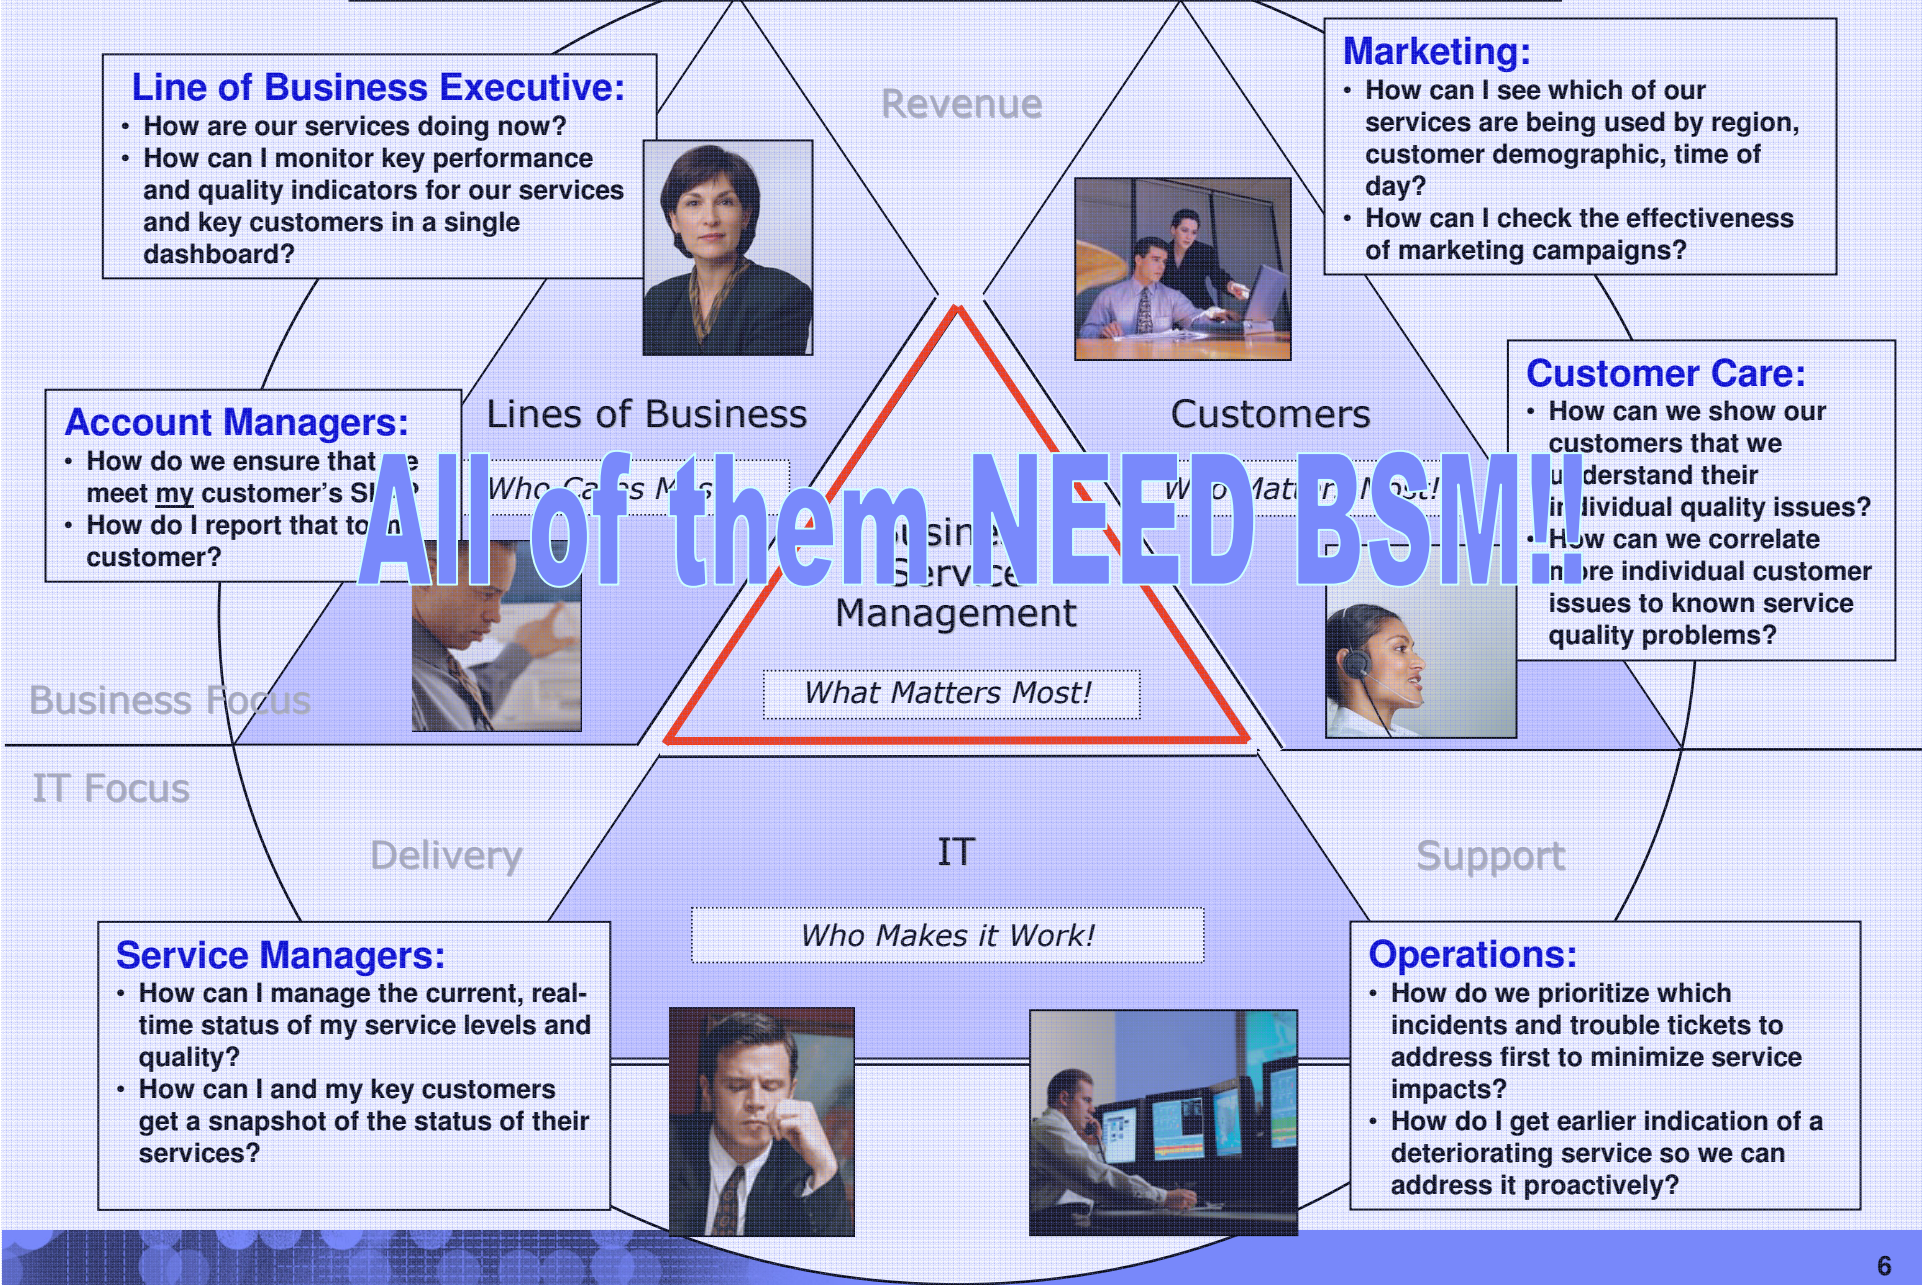

# Tivoli Service Assurance, Availability & Performance

- Enable Service Management through Consolidation and Integration
- Meet the needs of businesses with Quality, Scale, & Total Service Solutions

# Key Buy-In Personas to Target

# IBM Tivoli Business Service Manager v4.2.0

- Available for and supports both OS and distributed systems
  - Single Sign-On
  - OMEGAMON XE Functions not
  - NetView for z/OS
  - System z Data Pump
- Improved Consumability
  - Linux on z
  - Drag-Drop
- Improved scalability and availability
  - Common Tools/UI
  - Data server
- Enhanced Historical Reporting (via BI server):
  - Dashboard server:
  - out of the box reports
- Urgent Services for critical components
- IPv6 single/dual stack
- Expand Platforms: Redhat 5.0, SLES 10, AIX 6.1, Windows 2008

The screenshot shows the Tivoli Integrated Portal in Mozilla Firefox. The interface is divided into several sections:

- Navigator Task List:** A vertical sidebar on the left containing navigation links such as Welcome, My Startup Pages, Security, Users and Groups, Troubleshooting, Reporting, Charting, Events, Service Availability, Service Administration, and Settings. A blue arrow points to this sidebar.
- Service Tree Scorecard:** A central table displaying service status. A blue arrow points to this table.
 

Service	State	Time	Events

# IBM Tivoli Netcool/Impact v5.1.0

- **Netcool/Impact enables operations staff to overcome the common barriers associated with disparate systems (z & distributed), teams, and information sources in a way that is flexible, dynamic and systematic.**
- v5.1 makes Impact easier to use and faster to deploy
- New “ready-to-apply” integrations for ITM, TBSM, TEC, Netview for zOS, Webtop, and TSRM
- New AJAX-based policy management functions
- Enhanced GUI and Operator View functionality including AJAX and smart tags, security, failover.
- New Filter Optimizer for Efficient Integrations
- Process events 3.5x faster over previous versions
- Protects existing data stores by virtualizing access to distributed information.
- Clustering provides 1 - N multiple servers for improved availability, load balancing, and performance
- Linux on z, Windows 2008, AIX 6.1

**Filter Range Overlap Analysis Result:**

NOTE: Your current event matching choice is "Stop testing after first match".

**Color codes**  
■ Filter will be activated as specified  
■ Filter will not be activated in overlapping range  
■ Filter will NEVER be activated

## IBM Tivoli Netcool/Omnibus 7.2.1

- Full IPv6 – single/dual stack
- Critical Events Channel (fast notifier)
- TEP integrated MOSWOS
- TEC Upgrade support
  - Hierarchical Events
  - Extended Attributes
  - Baroc to SQL tools
- Additional OMNibus health monitoring tools
- Extended platform support
- Enhanced Security (FIPS140-2 / FDCC)
- Web 2.0 based console: enhanced integration, ease of use and simplify deployment.
- Z/Linux platform support
- Process Control update for Windows
- Bi-Directional probes / Dynamic Threshold

## BSM Foundation: Improving Quality for your Customers

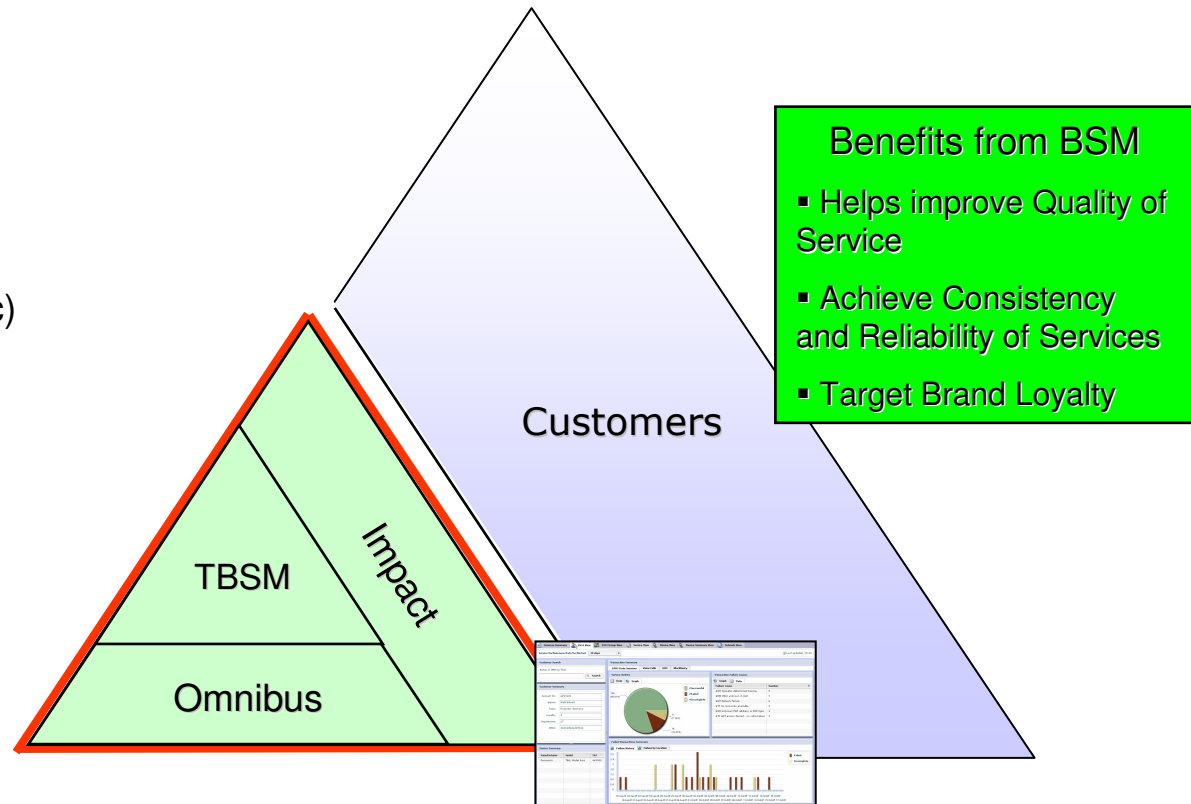

### Extensions to BSM core value:

Formal solution offering: Service Quality Management Center (SQMc)

- Real-Time Service Availability
- SLA & Service Performance
- Customer Experience (CEM)

Focus key to improving quality of service and customer experience delivered

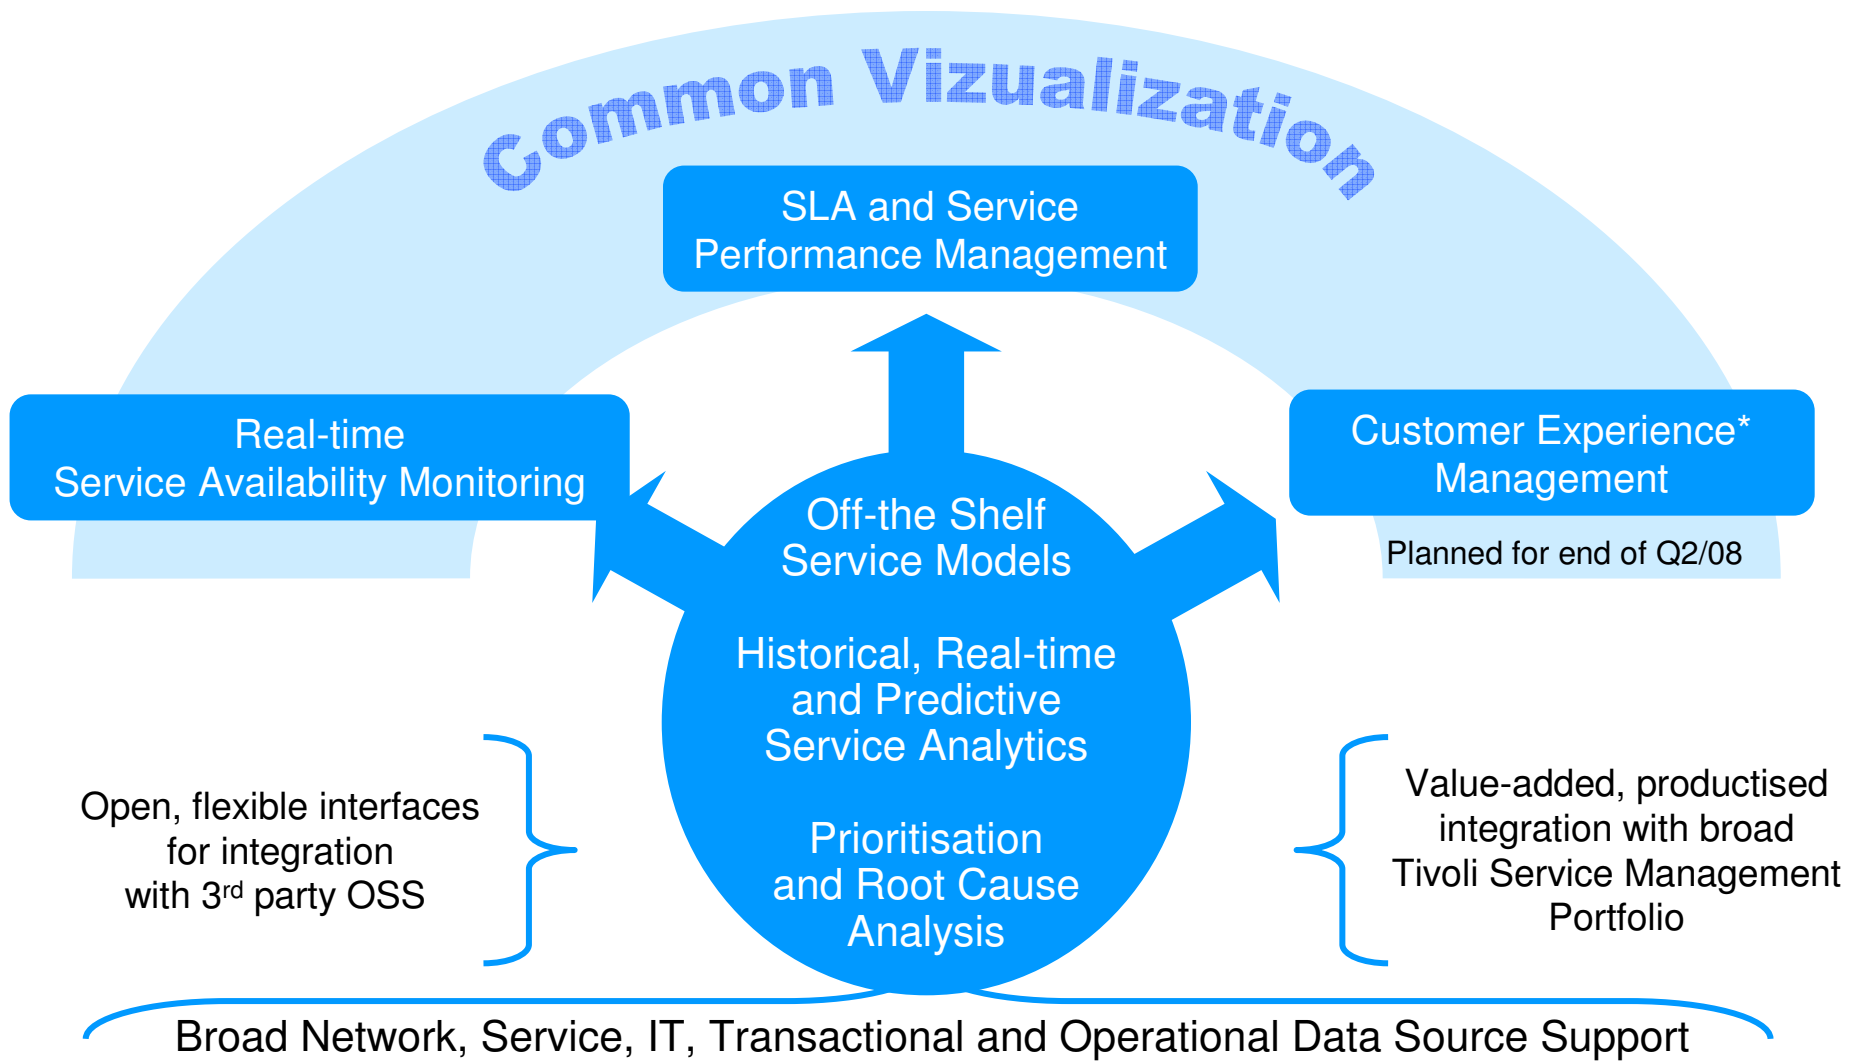

Synchronized roadmap requirements with TIP, reporting, modeling, KPIs

### Tivoli Netcool/Customer Experience Manager

- ✓ *Measures and reports on aggregate service levels and individual customer experience. TNSQM & CEM do this by calculating the service quality throughout the service path, aggregating base performance indicators into Key Quality Indicators*

**CEM: Part of bigger Service Quality Management solution**

# CEM: leveraging SLA data for Customers

Select individual user – interfacing to CRM

Launch 'in-context' into the Device Type analytics, by selecting a specific Device Type

Launch 'in-context' into the Customer Group analytics if the customer is a member of a group

Only services accessed by this user will be presented

Analysis can be performed on a number of different perspectives

A Breakdown individual customer transactions

Summary of the successes and failures

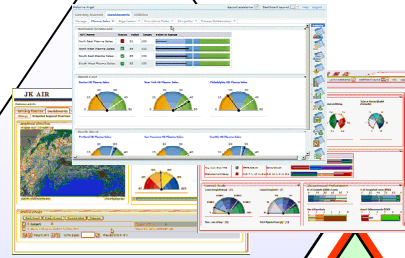

Analysis of the transactional data allows drill down to the failure causes

## BSM Foundation: A Strong Bridge to the Business

**Benefits from BSM**

- KPIs to provide deep visibility into delivered services
- SLAs to measure service delivery and drive accountability

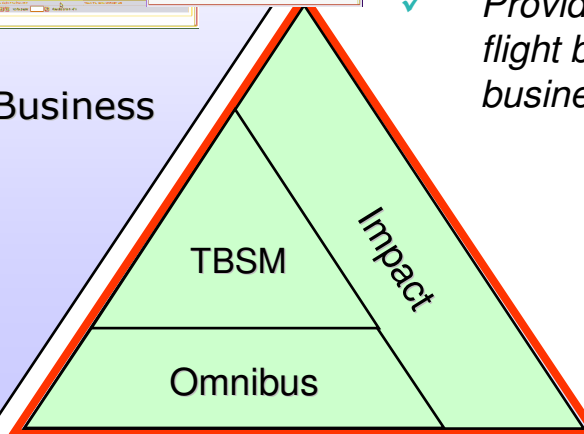

Lines of Business

### Websphere Business Monitor:

Visualize Business Performance

- ✓ Provides views into performance of in-flight business processes, provides business intelligence from collected data

### Extensions to BSM core value:

BSM meets BAM/BPM – comprehensive solution

Formal linkage of Tivoli and Websphere products

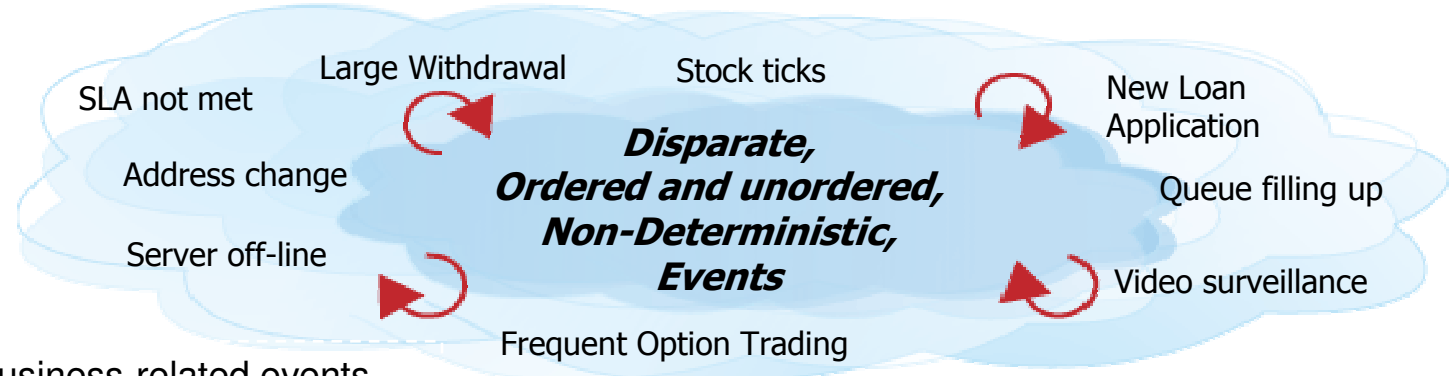

- Impact integrated with WBE - Websphere Business Events
- TBSM integrated with WBM for KPIs, modeling, and status
- Omnibus integrated with WBE and WBM for CEI eventing

### WebSphere Business Event Processing:

Detect business situations

- ✓ Receive or extract messages from many sources, detect “business situations” based on message patterns and data, derive new events (i.e. through aggregation, information enrichment, etc.)

# Improved Alignment, Execution and Agility through Shared Context & Awareness

Business-related events  
e.g. Trading volumes, revenue figures

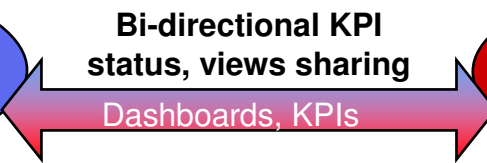

IT-related events  
e.g. Transaction times, SLAs

**WebSphere**  
Business Event  
Correlation

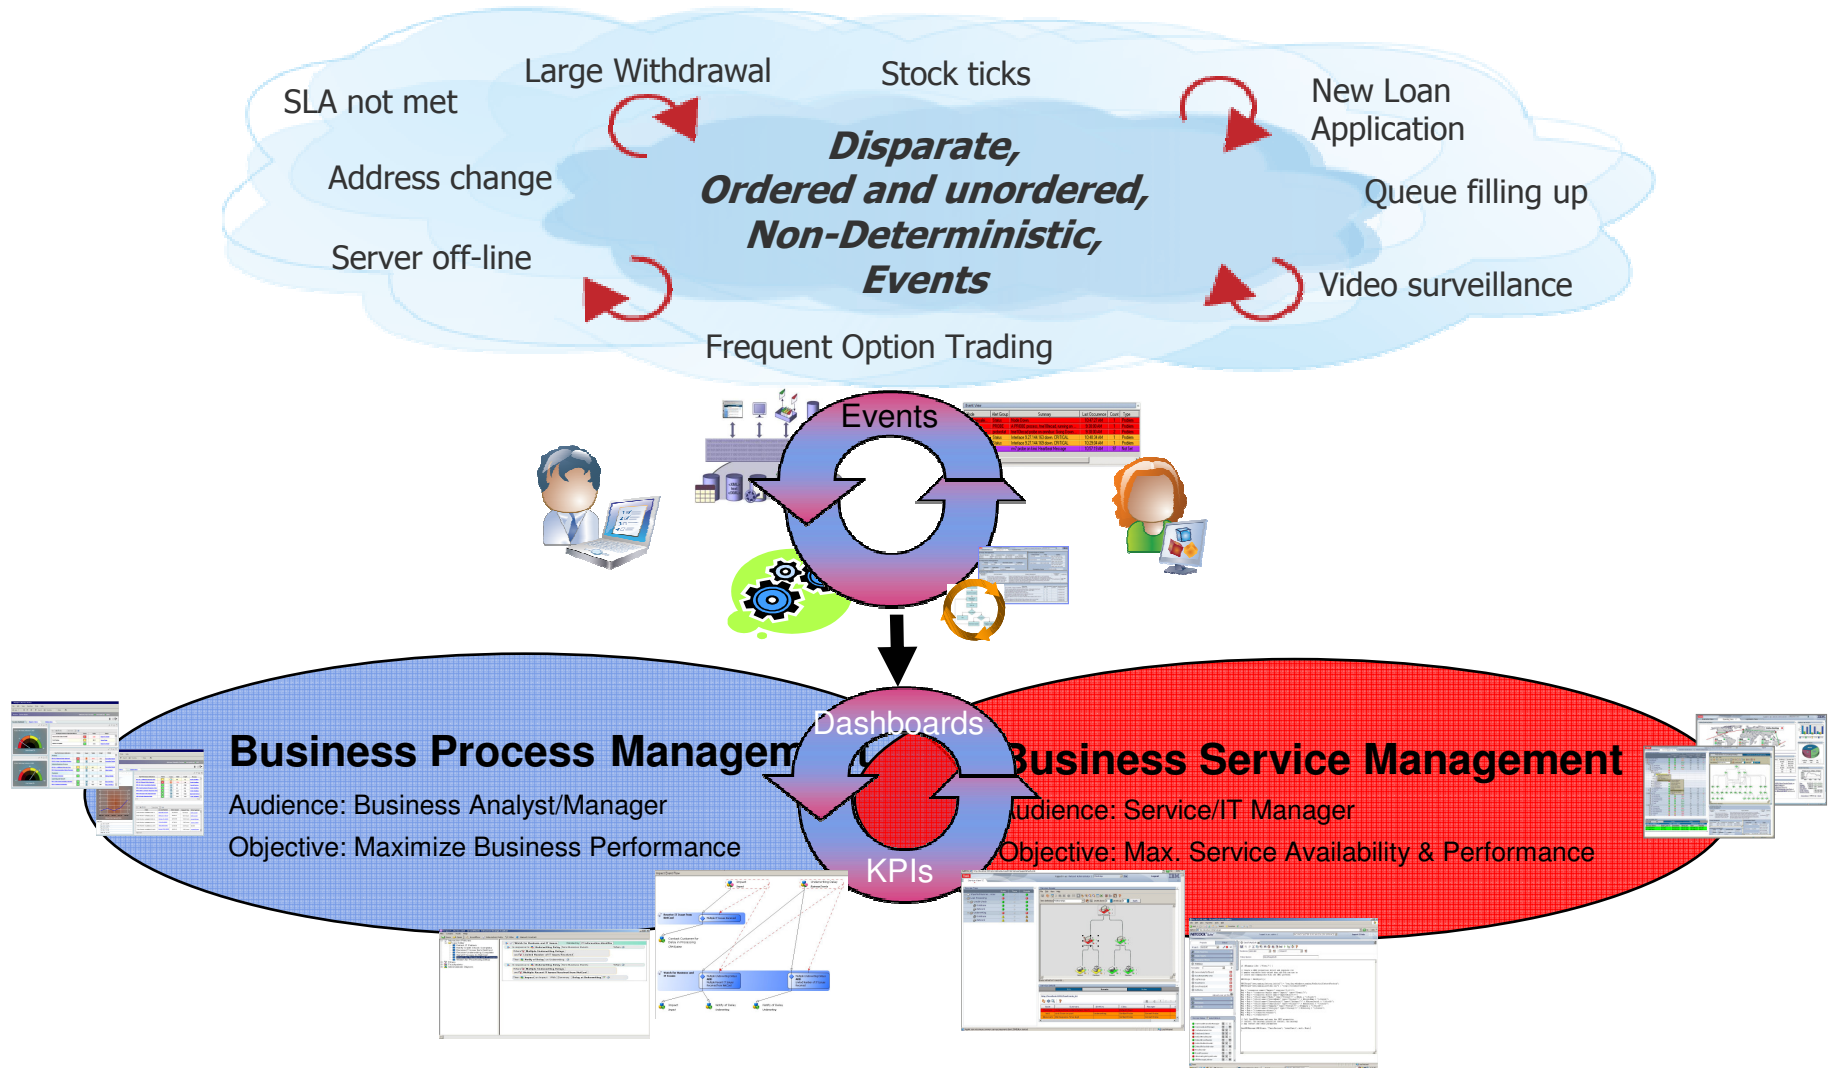

**Tivoli**  
Service Event  
Correlation

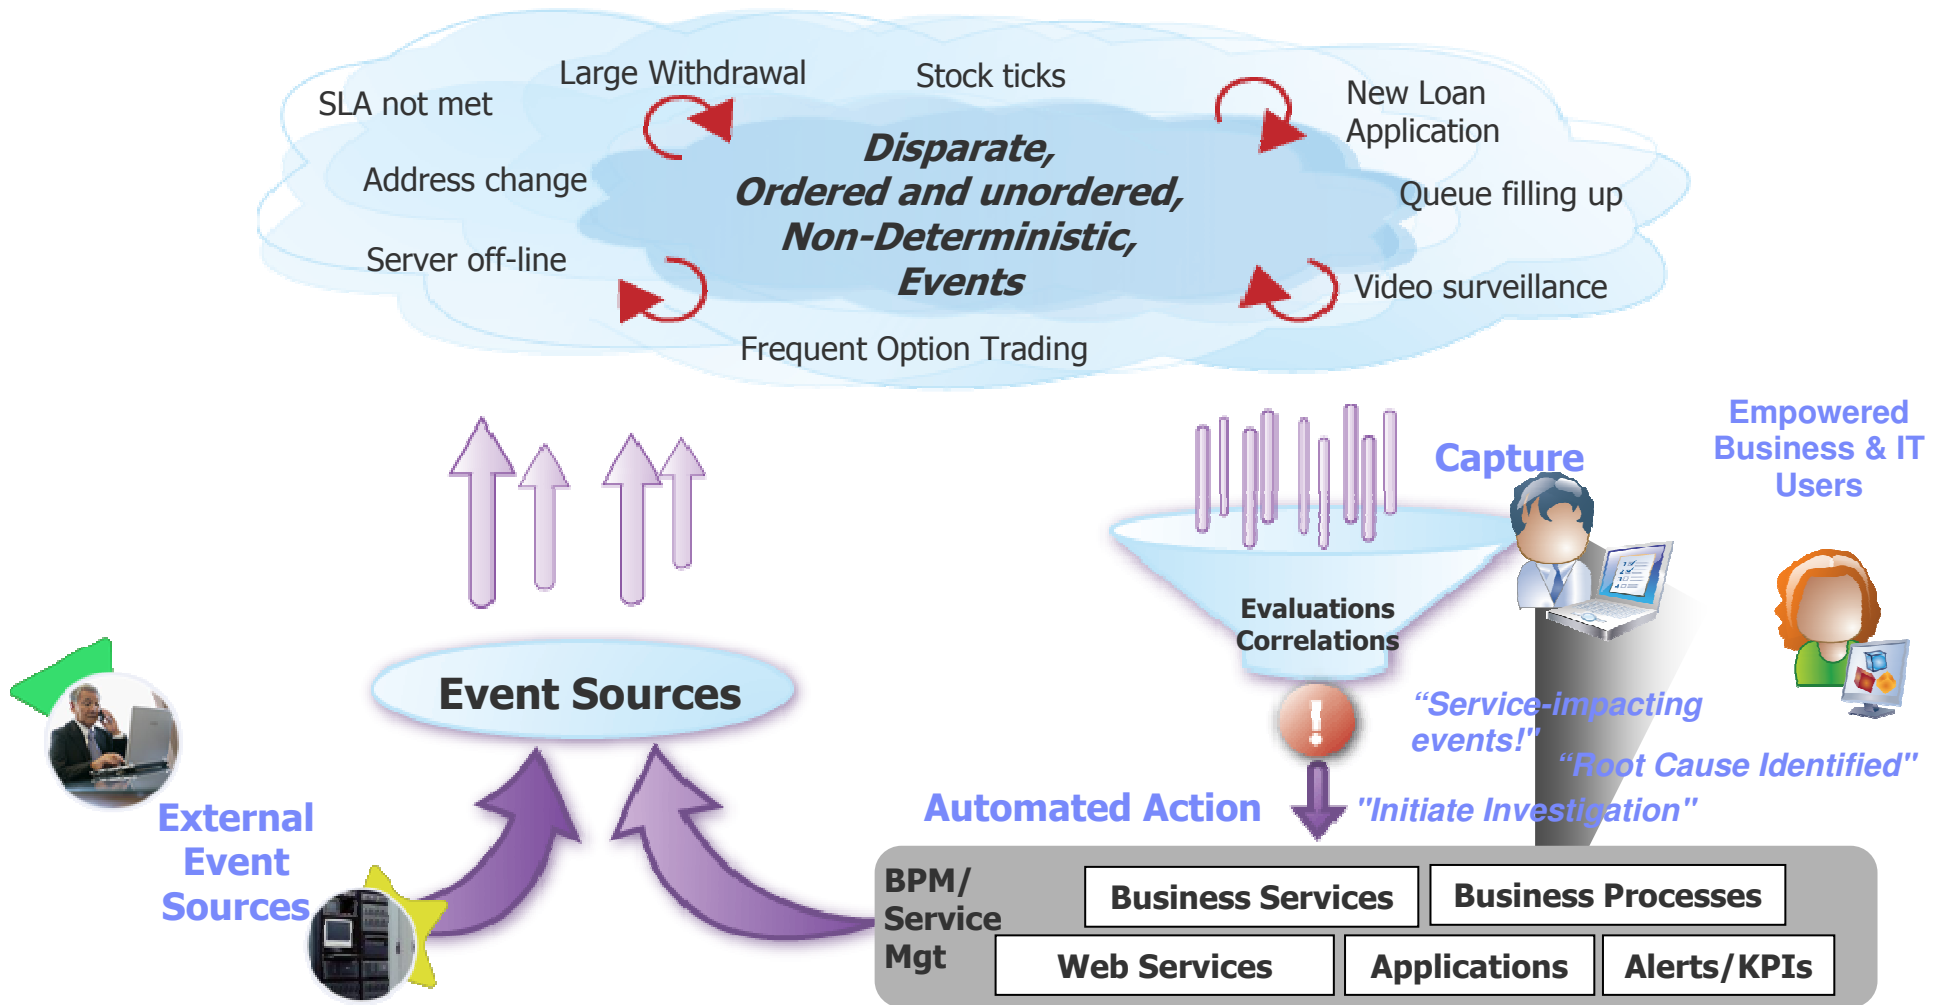

# Improved Alignment, Execution and Agility through Shared Context & Awareness

# Improved Business Agility for Tivoli Users

Integrate business and IT performance directly to drive a more agile business

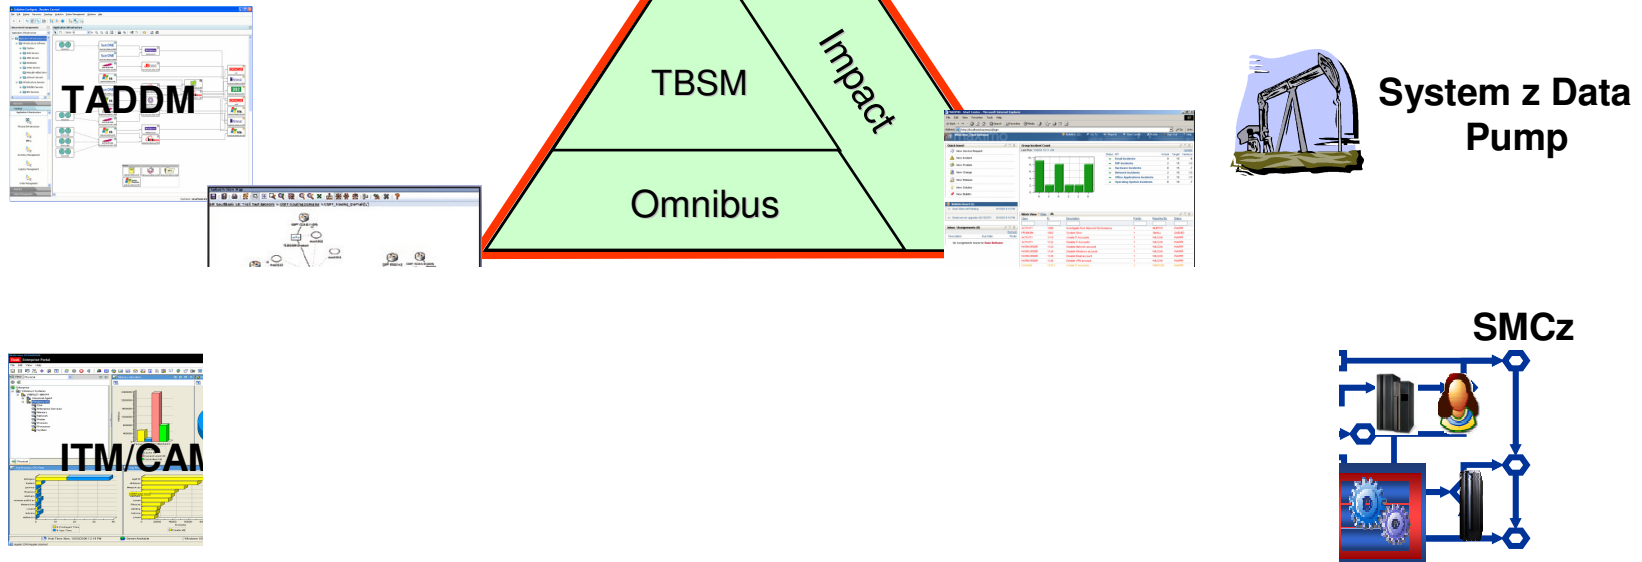

## BSM Foundation: Moving IT Visibility Forward

### Extensions to BSM core value:

- Enhanced TADDM integration
- Model ITNM network resources
- Charting in BSM for ITM/CAM
- ITM/CAM as KPI source

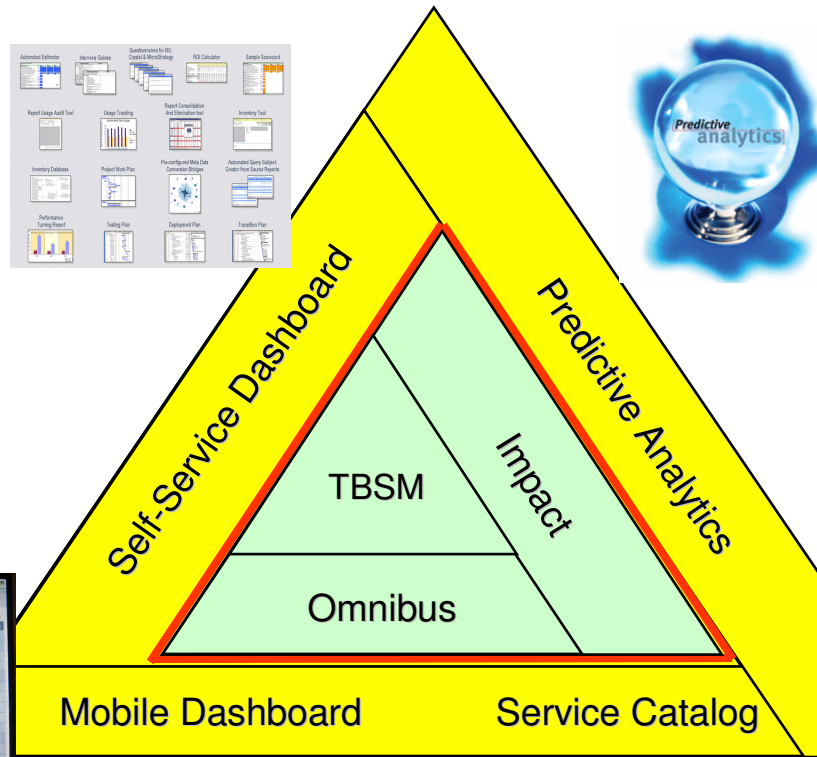

### Extensions to BSM core value:

- TSRM integrations and launch
- Service Management Center for System z (SMCz) solution
- System z Data Pump

## BSM Foundation: Future Directions for Expanding Value

- ✓ Extending typical user to knowledge worker persona; map new/various widgets with formal data dictionary of sources. BSM data sources to be used in Mashups. Drag and Drop assembly. Time-Series and Heat-Map widgets

- ✓ Applicable to event and performance data feeds in real-time as well as historical. Learning engine to determine abnormal behavior and alarm/action on them. Further data sets can include BSM, network performance, security, and customer experience

- ✓ Consume and direct service management from a variety of mobile devices with hand-held client software tailored to exploit device features. Offer remote insight into health of services and drive appropriate escalations/handling

- ✓ Exploring formal linkage with Service Catalogs as part of BSM. Goal is to link with TSRM and its Service Catalog, as well as 3<sup>rd</sup> party integration options

# Business Service Management Requires a Closed-Loop Approach

- Service Dashboard
- Business Service Management

Service Management Platform

- Service Level Management
- Infrastructure, Application Discovery and Mapping

How does this relate to the business service?

- Server monitoring
- Storage monitoring
- Network monitoring
- Data monitoring
- Application monitoring

What's happening with the infrastructure?

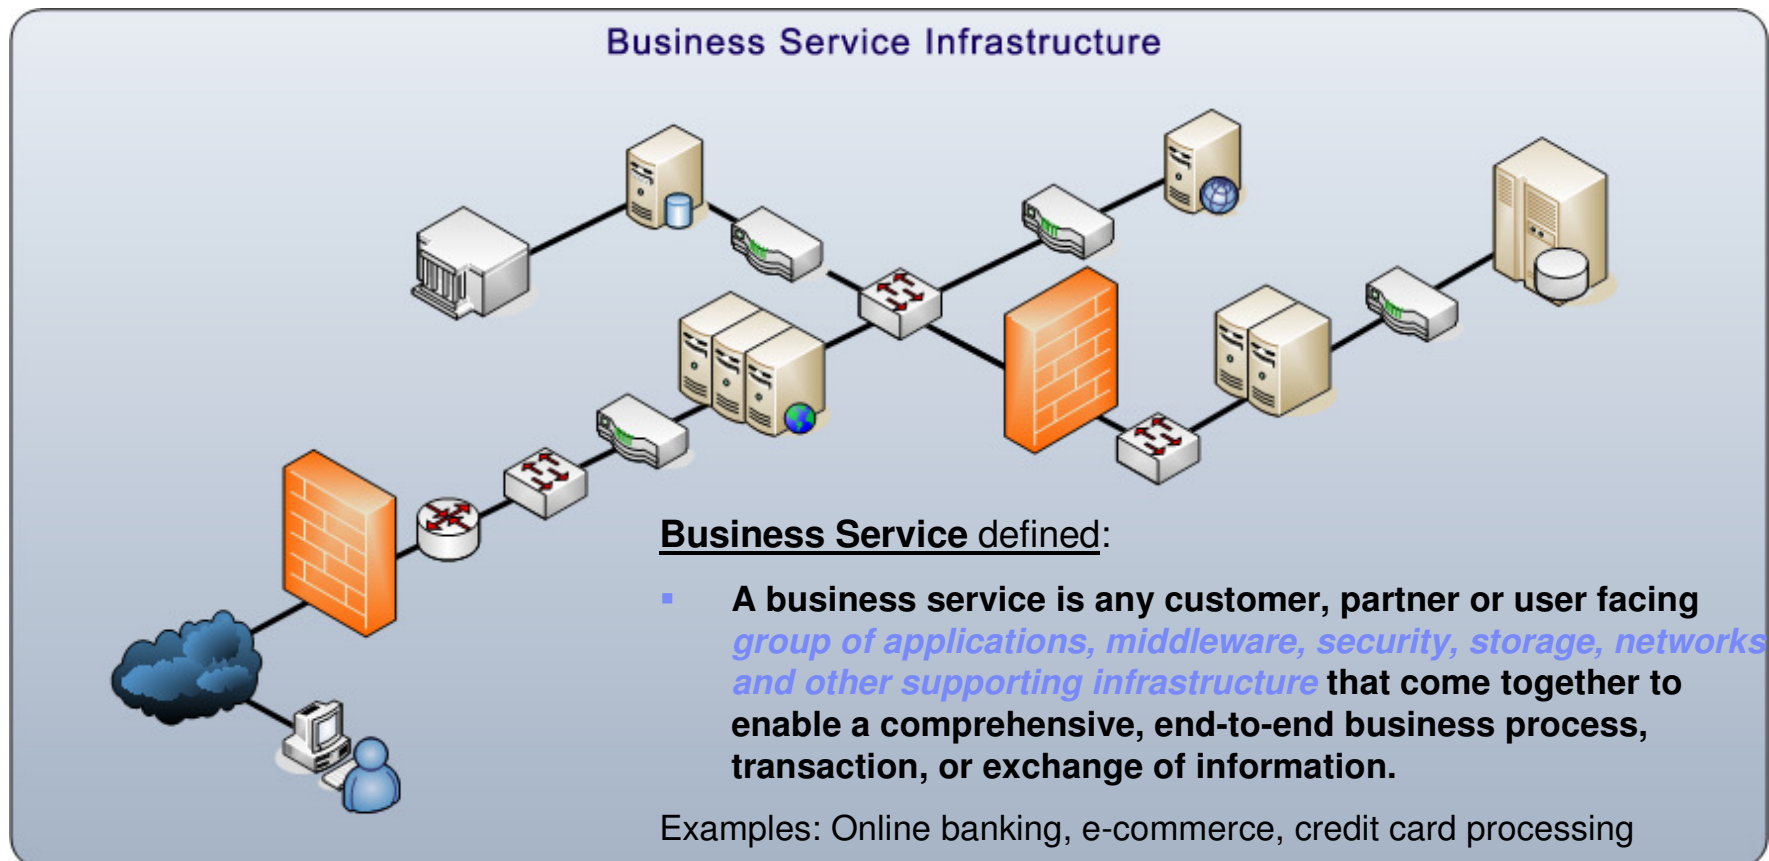

What actions do we take to correct the problems?

- System reconfiguration
- Data restore
- User identity provisioning
- System and application restart
- Infrastructure deployment

What's happening with the infrastructure?

W/ IBM Process Managers

What actions do we take to correct the problem?

# You need another differentiator?

- Shared Open Standard Reporting Tools for Large Operations
- Enables Consistent Tooling for Report Generation and Maintenance
- Simple, schedulable reports giving insight into Product behaviors
- Extensible to Cross Product Reporting

# Case Study: Automatic Data Processing Inc.

*“This tool provides a single point where Tivoli and integrated components provides a high level view of ADP lines of business.”*

— Andrew McKenzie  
Technology Infrastructure Services  
Automatic Data Processing Inc.

## Business Challenge

ADP needed a premier Business Service Management solution that they could deliver to their clients.

## Business Benefits

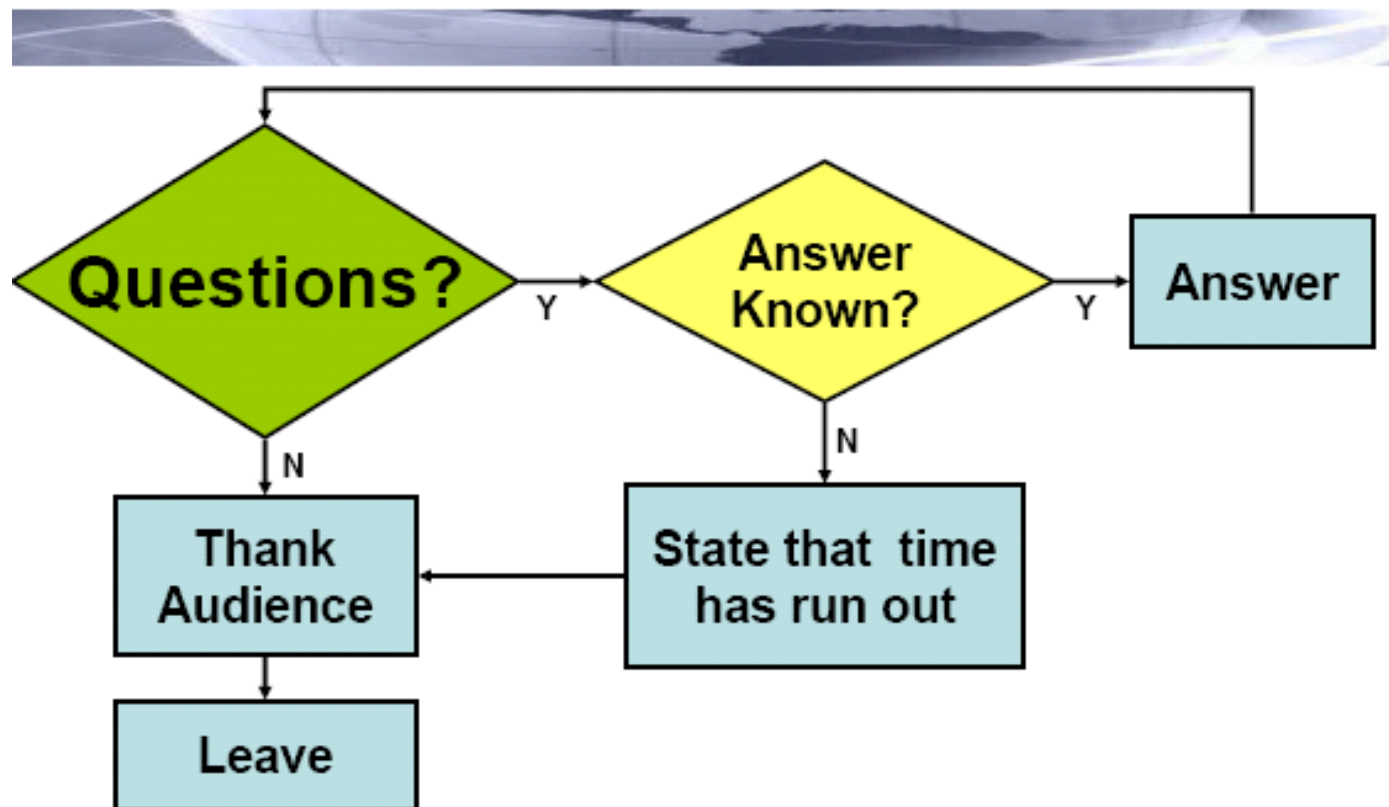

- Customizable centralized views of business services and interrelationships
- Easily understood visual warnings to executives of service levels falling out of bounds
- Flexible display of business metrics such as availability, response times, and transaction volumes
- Concise views that allow business executives to understand the state of their services at a glance
- Fast impact and root cause analysis to pinpoint customers and links that need immediate remedial attention
- Validation of SLAs through real-time visibility of KPIs and KQIs

## Solution

- IBM Tivoli Business Service Manager 4.1

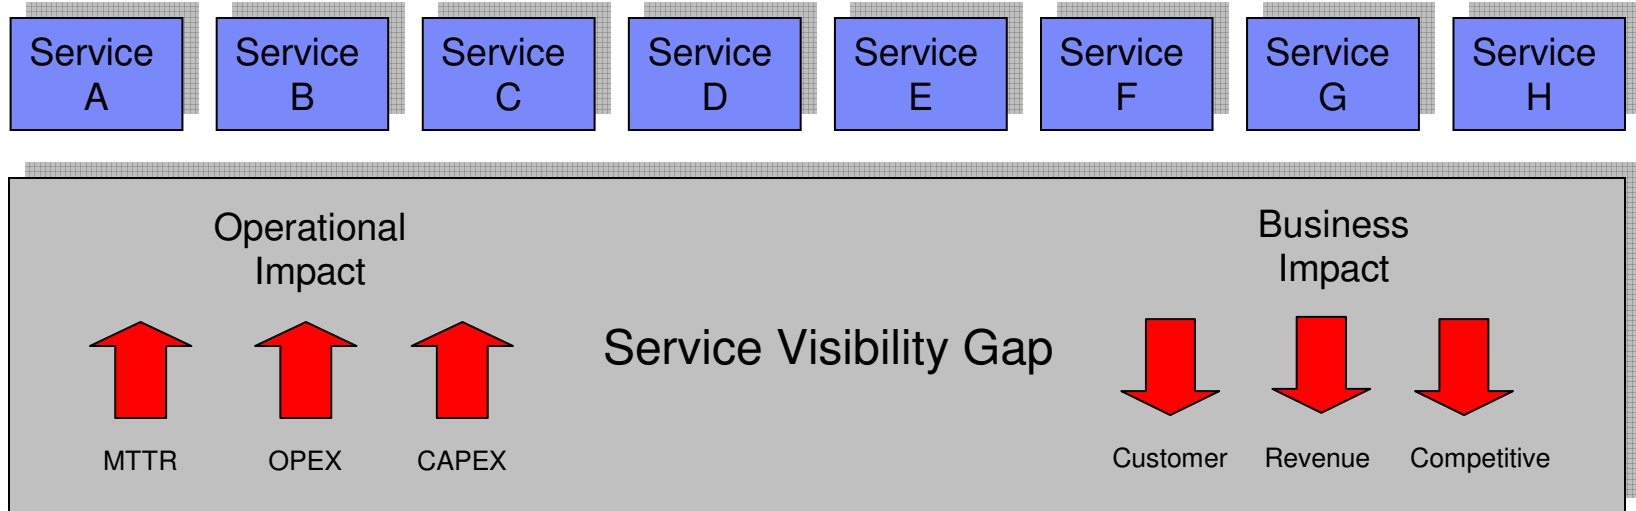

# Questions?

# Common Challenges in aligning Operations with Business Services

Multiple Business Services

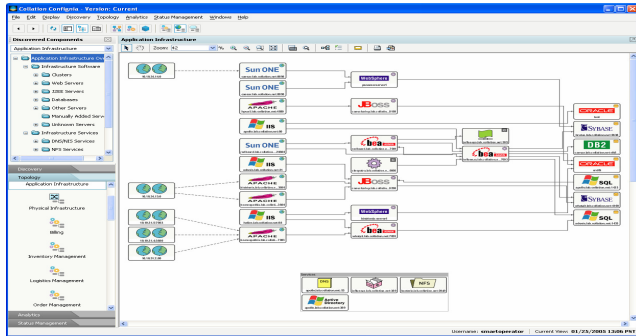

Multiple Operations Centers

Multiple Silos, Tools, Technology, Data, Vendors, Staff

# TADDM Discovery for BSM Foundation

TADDM 7.1.1

TBSM 4.2

Booking Locations	Booking Type	Booking Method	Insurance Innovation
• Casuel, Mexico	Air / Hotel	Phone	100% (L: 100% Y: Y)
• Eastern Caribbean	Cruise	Phone	15% (L: 1% Y: Y)
• Rome, Italy	Air / Hotel / Tour	Online	5% (L: 1% Y: Y)
• Brussels, Belgium	Air / Hotel / Auto	Mobile	0% (L: 0% Y: Y)
• Dallas, Texas	Hotel	Customer Service	0% (L: 0% Y: Y)

Cross tier application maps  
Configuration changes

Launch in context to  
configuration details panels

- New integration features/enhancements in TBSM 4.2 and TADDM 7.1.1:
  - Based on feedback from MANY active customers
  - Improved performance for data bulk loads
  - Fixed model inconsistencies and synchronization issues between products (GUID alignment, server time synchronization, object name, etc)
  - New TBSM Discovery Library Adaptor (DLA)
  - TADDM discovery: provide POC Guide, performance & quality improvements compared to v7.1 (API, data sync, credential free discovery)
  - TADDM Simulator – simulates SSH and helps fix SNMP problems
- Update and deliver new version of the TBSM-TADDM integration best practices white paper to reflect TBSM 4.2 and TADDM 7.1.1 enhancements and new capabilities
  - Including cookbook information

# Incident and Problem Management integration for BSM

✓ Controlled support process accelerated with IT Ops Dashboard event automation, performance visualization, contextual navigation and proactive remediation

## Service Desk

### TSRM SD CCMDB

**Service Desk Incident Process, Knowledge Database**

**1** Level 2 Help Desk Operator receives zIncident from IT Ops Dashboard. Searches SD knowledge db with history of past problems.

**Business view**

Navigation zEvent automation

**5** L2 Operator closes trouble ticket closed and has helped IT Ops proactively prevent a LOB business app SLA violation ( red status ) from occurring.

Help Desk Feedback

**4** Storage Sys Prog is identified for help. TEP take action or drill down to 3270 is used to remediate.

**2** SD knowledge db reveals simr incident in past. 1<sup>st</sup> TBSM is checked for impact analysis and leverage navigation automation. LOB app has gone yellow.

Navigation zEvent automation

**3** Next, TEP IT Ops Dashboard used to determine which SME to contact (storage, network, server). TADDM also used to check for recent configuration changes.

## IT Ops Dashboard

**TEP zEvent creation automation, visualize performance, remediation control**

**zProduction Control and Operation (TWS, TSA)**

...

**zStorage SME deep dive analysis ( OM XE for Storage, Allocation Optimizer, Advanced Catalog Management, Advanced Audit for DFSMSshm )**

**zNetwork SME deep dive analysis ( OM XE z/OS, OM XE for MfN, zNetview )**

Trouble Ticket creation automation, bi-di status updates

### OMNIBus TEC

**Event mgmt**

zEvent creation automation via ANY TEP Workspace

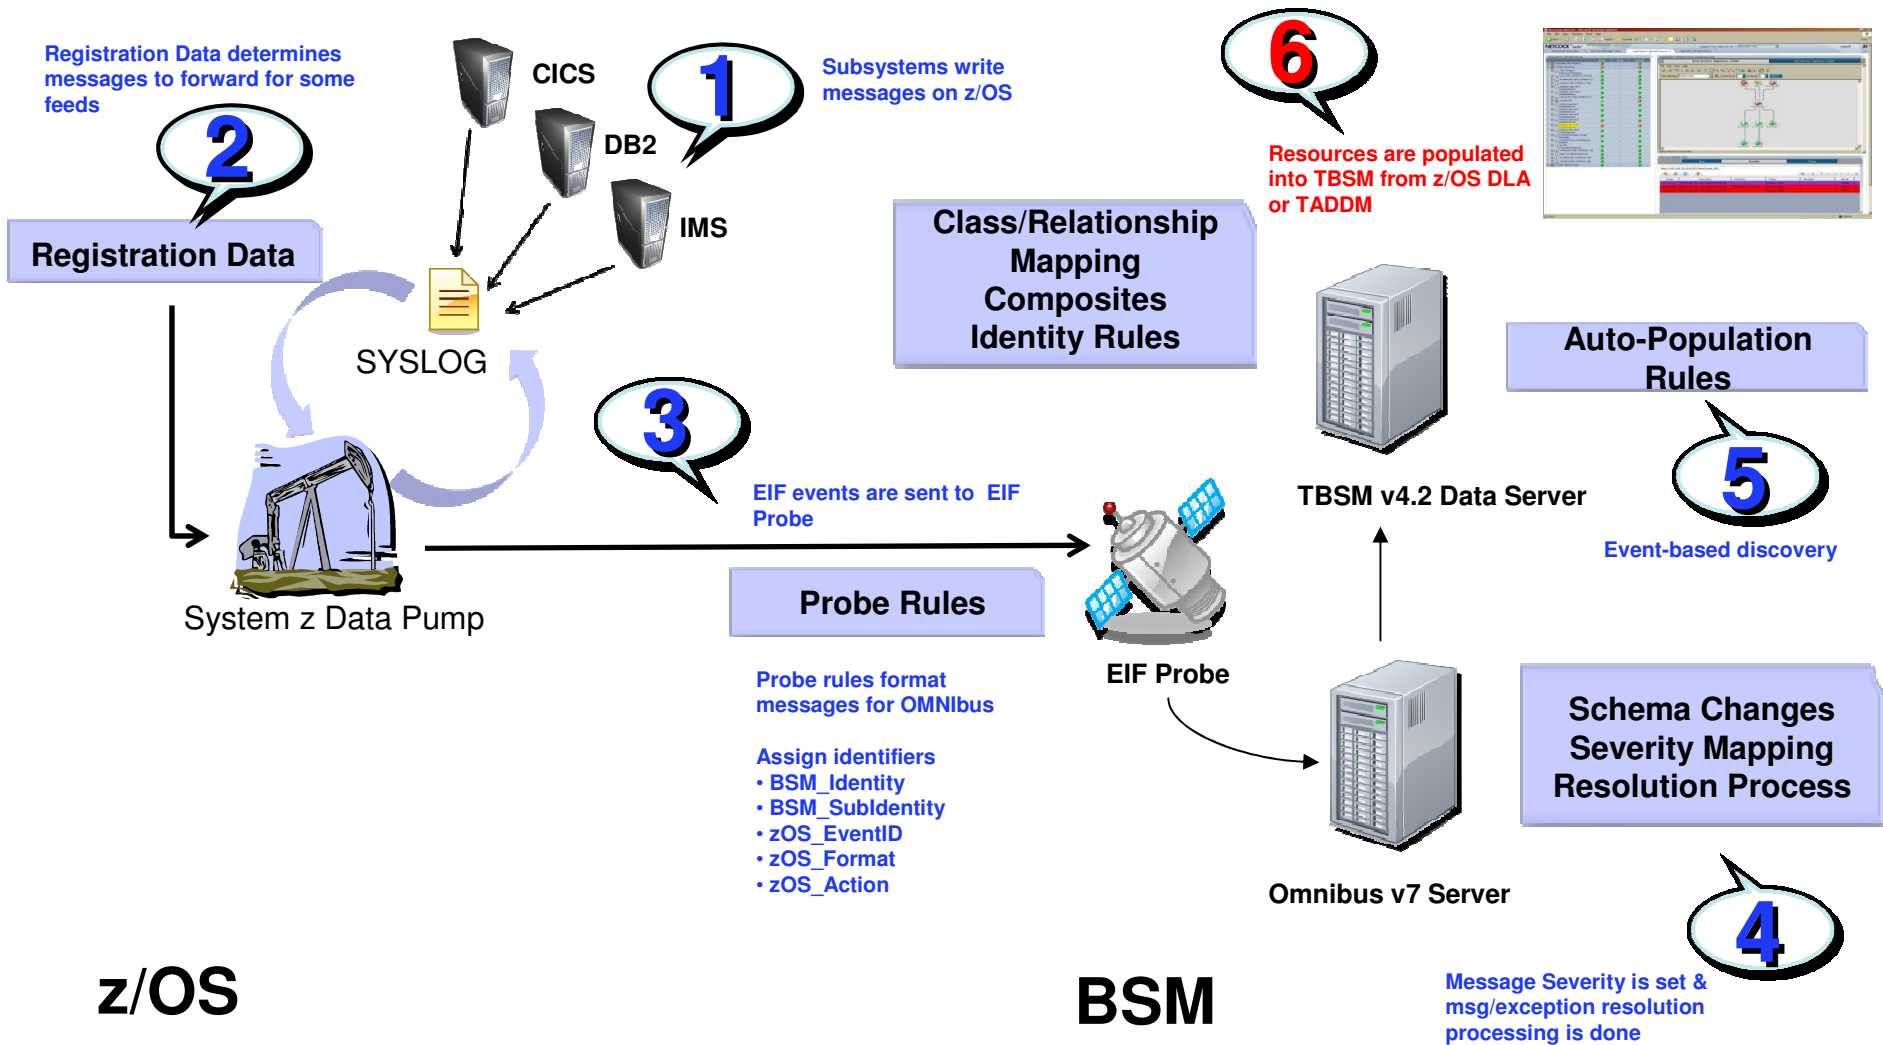

### OMEGAMON

**TEP task execution**

### TADDM

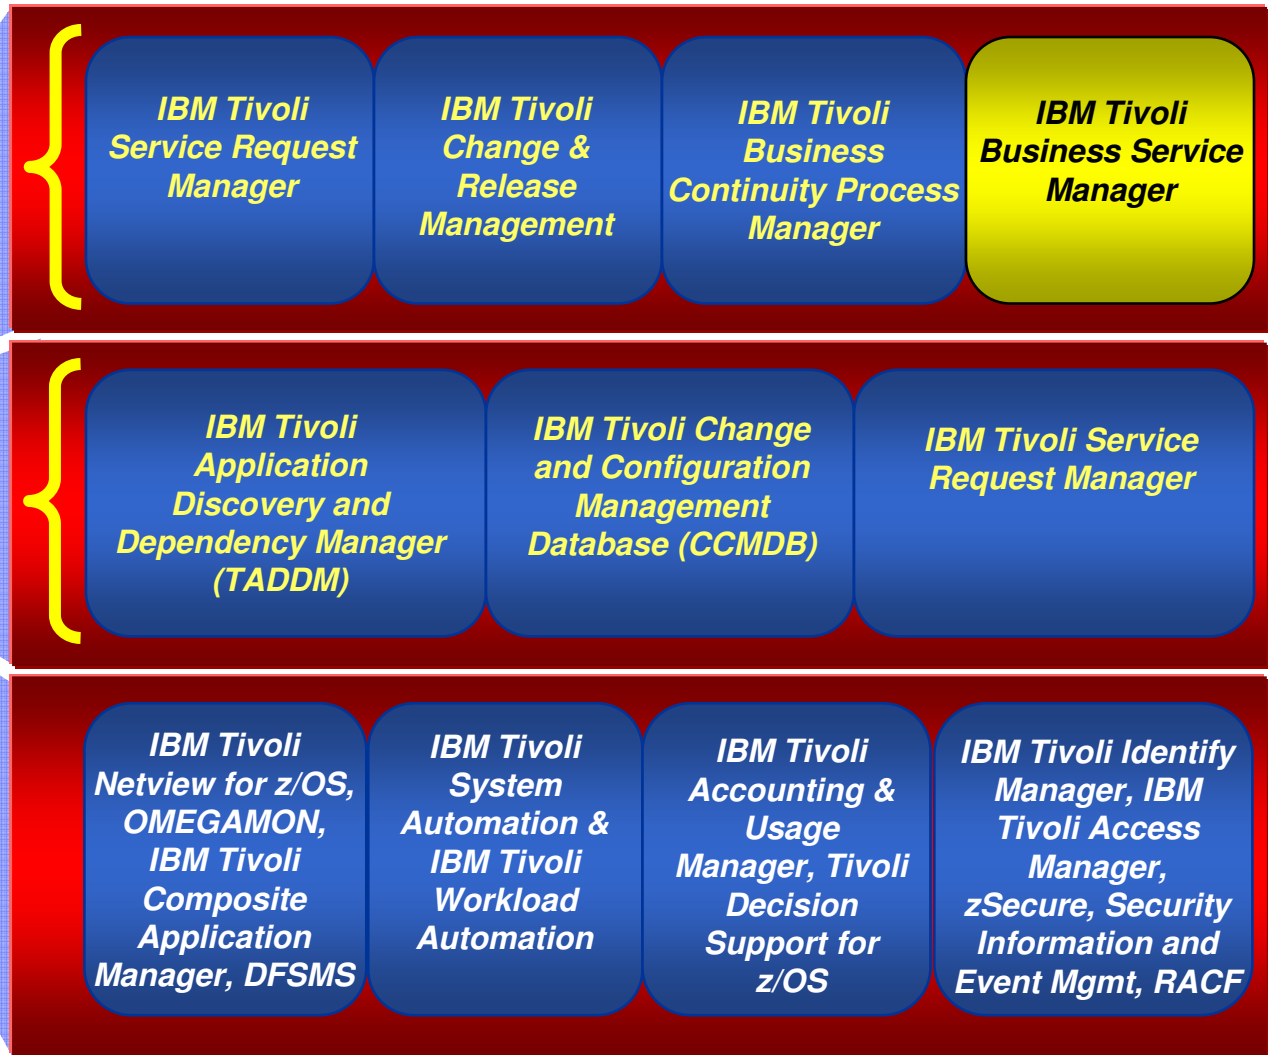

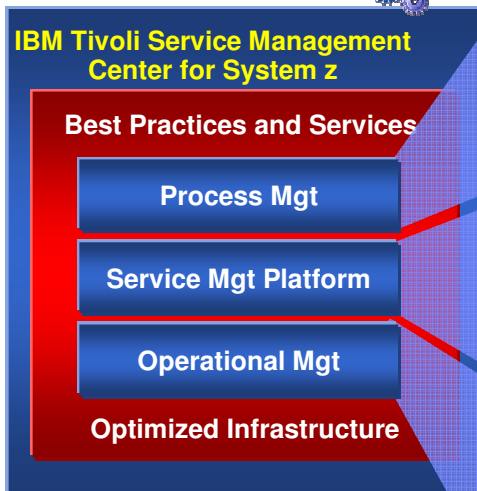

**Configuration drift history, dependencies**
