

Complimentary IBM ISS Security Health Scan: identify, assess and defend against network security vulnerabilities

Highlights

- ***Detects network vulnerabilities before they impact business operations***
- ***Identifies strengths and weaknesses of current security practices***
- ***Helps safeguard the confidentiality of business data, improve business uptime and address regulatory compliance requirements***

Preemptive security is critical

The evolving nature of security threats, combined with today's increasingly complex networking environments, can expose organizations of all sizes to serious network security risks. Organizations can no longer afford to take a reactive approach to network security; there is simply too much at stake. A security breach could be costly – not only to an organization's reputation, but also in terms of potential regulatory compliance violations, network downtime and lost employee productivity. IBM Internet Security Systems™ (ISS) helps organizations stay ahead of new Internet threats, before they impact business operations.

Identify where risk exists

A critical first step in proactively securing IT infrastructure and ensuring business continuity is understanding existing network security vulnerabilities. To help organizations gain visibility into areas on the network which pose potential security risks, IBM ISS is offering organizations a complimentary Security Health Scan. This service allows organizations to obtain detailed, actionable information about current security posture in order to:

- *Asses strengths and gaps in current security practices*
- *Prioritize network exposures posing the greatest risk*
- *Help maintain compliance with federal, state and industry security regulations*
- *Help protect company assets, reduce network downtime and boost operational efficiencies*
- *Lower costs associated with security processes*

**IBM ISS Security Health Scan:
information you can trust**

Organizations that take advantage of the Security Health Scan from IBM ISS will receive access to the IBM Virtual-Security Operations Center (Virtual-SOC), a Web portal that provides up-to-the-minute statistics and information regarding the current state of an organization's security posture in order to:

- *Identify security issues found in servers, firewalls, switches and other networked equipment*
- *Experience first-hand the benefits of IBM ISS preemptive protection capabilities*
- *Increase internal awareness around potential threats and the need for advanced security intelligence*
- *Help create justification for future security investments*

*This limited time offer is for one IP range (up to 25 IP addresses) or up to five individual IP addresses. Addresses will be scanned one time per week for up to four weeks.

Staying ahead of the threat with IBM ISS

IBM ISS has the extensive knowledge, in-depth research methods and innovative technologies to provide preemptive protection for the most security-conscious organizations. From stand-alone solutions to centrally-managed security systems to outsourced security management,

IBM ISS offers complete, end-to-end coverage of an enterprise's IT infrastructure. Solutions from IBM ISS are backed by the latest vulnerability and threat intelligence collected by the IBM Internet Security Systems X-Force® research and development team, which helps prevent future threats before they become attacks.

Get started today

To conduct a detailed assessment and analysis of security posture and understand existing network vulnerabilities, go to the registration page and sign up now for the complimentary IBM ISS Health Scan, or contact your local IBM sales representative.

About IBM Internet Security Systems

IBM ISS is the trusted security expert to global enterprises and world governments, providing products and services that protect against Internet threats. An established world leader in security since 1994, IBM ISS delivers proven cost efficiencies and reduces regulatory and business risk across the enterprise. IBM ISS products and services are based on the proactive security intelligence conducted by the X-Force team – a world authority in vulnerability and threat research. For more information about the complimentary Security Health Scan, please contact your IBM representative or IBM Business Partner. You may also call 1 800 776-2362 or visit ibm.com/services/us/iss.
