

IBM Software

Innovate2012

The Premier Event for Software and Systems Innovation

Next  NOW!

Delivering Value whilst Balancing Cost, Time and Innovation on a Globally Outsourced Telco Programme

Rajan Kumar Jha (Programme Manager: Infosys) – RajanKumar_Jha@infosys.com

Tony Grout (Executive Consultant: IBM) – tony.grout@uk.ibm.com

Innovation in the
telecommunication
industry is changing the
world

This is a story of how
hard innovation at scale
can be and how it's been
fixed

Working in partnership with the customer and importantly together in order to succeed

Infosys[®]

Rational[®] software

The complexity is huge

22 Operating Countries

9 Systems

Global and local systems integrators

Managing stakeholders is critical

Different ideas globally dispersed

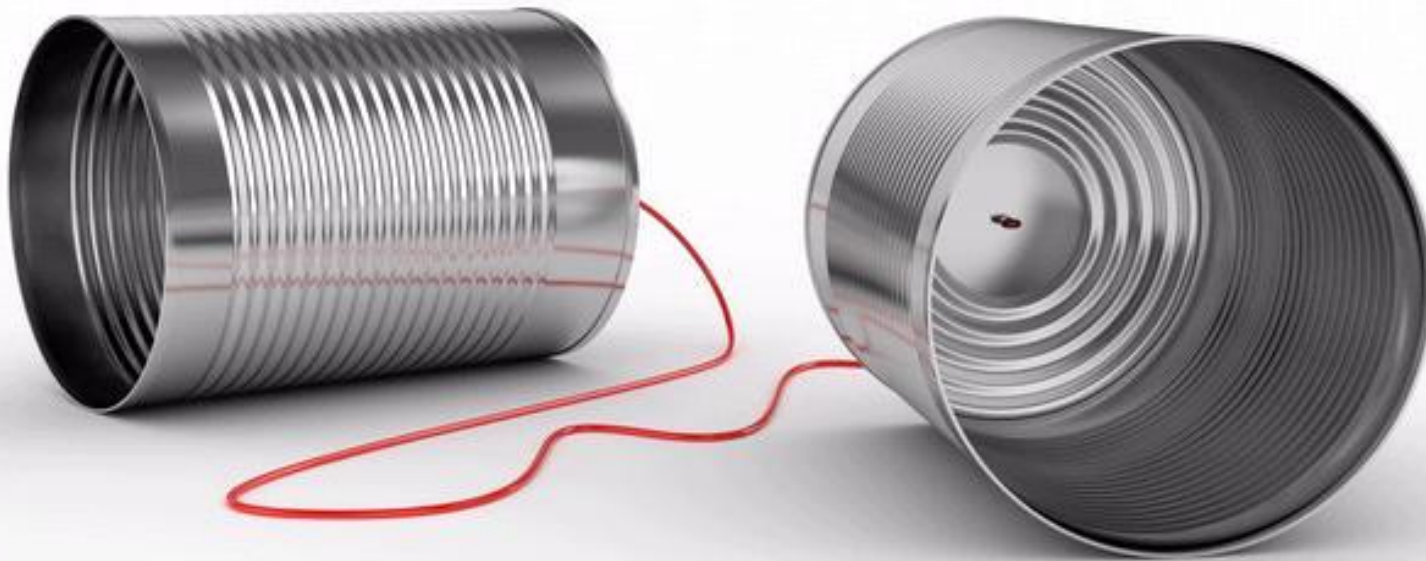

Same ideas **implemented differently**

Conflicting ideas

Different **timeline** for ideas

Development infrastructure was rudimentary

Driving blindfolded with “Status by Slideware”

Lost predictability of cost and time

Ability for business to make sensible
trade offs was lost

Assessing impact of change was next to
impossible

1,500 complex
processes poorly
automated and
governed

Let's not do that again!

One definition of insanity:
Doing the **same thing over**
and over again and **expecting**
different results

More licences of
RequisitePro
wasn't the answer
so what was?

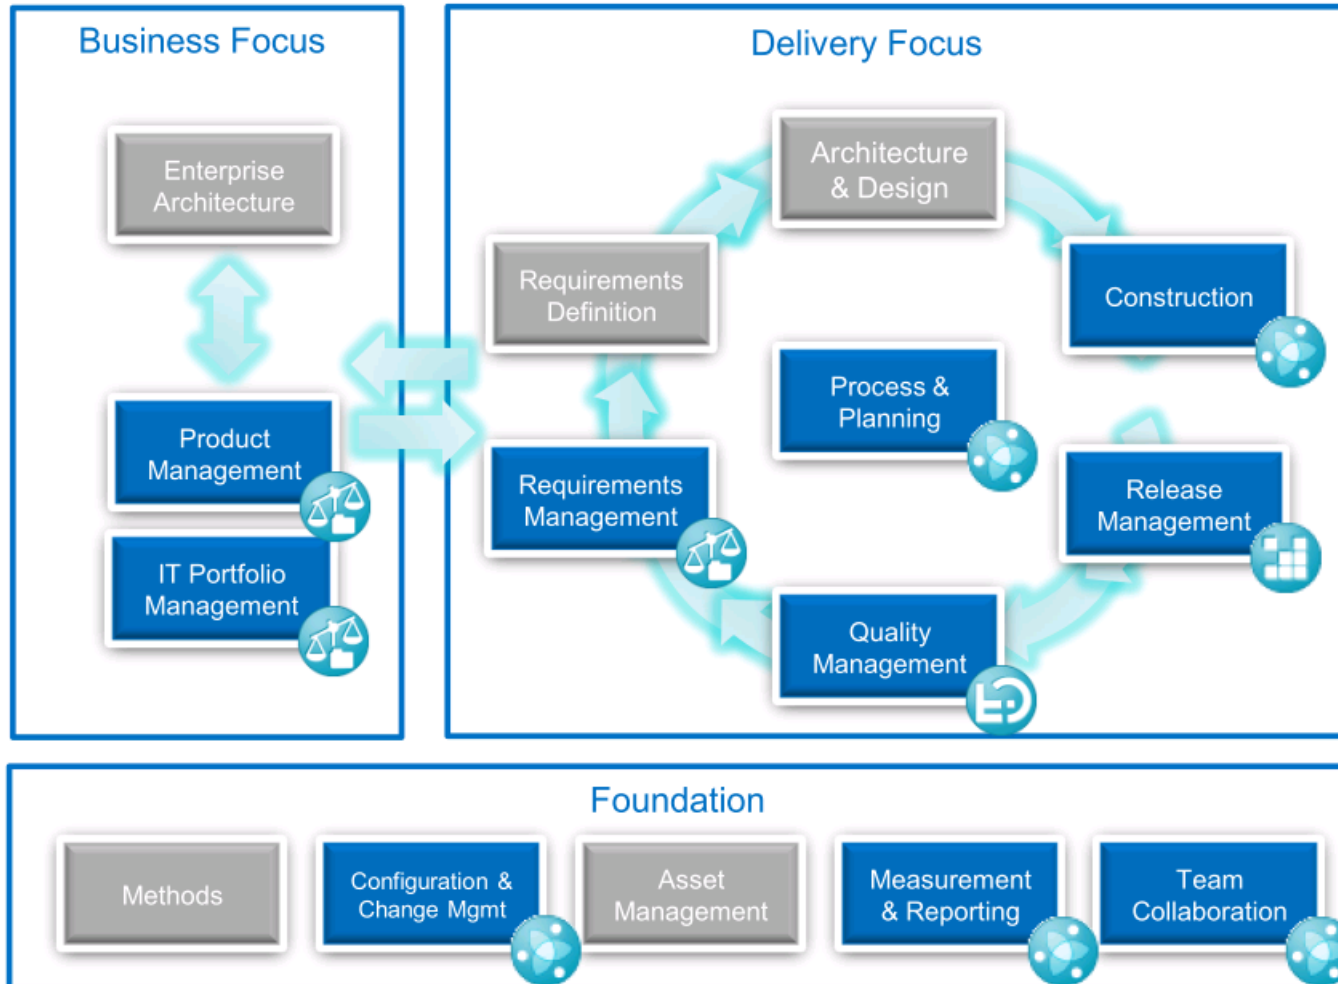

Rational had much more to offer

1. End to End collaborative environment
2. Streamlined demand capture
3. Simplified impact analysis
4. Real-time frictionless status reporting
5. Automated governance workflow
6. Software Supply Chain Thinking

Rational much more too offer

From Paddington to Pune to define what good looks like

14 days back to back

25 people

3,500 hours

Kick-off Workshop agenda

- 13:45 Review RACI matrix and process for next quality gate
- 17:00 Review Rational tools basic capabilities in process area for that gate
- 19:00 Leave Infosys campus for hotel
- 19:45 Prototype how tools would automate processes discussed that day

Kick-off Workshop Agenda

07:30 Review yesterdays progress in the car

08:15 Arrive at Infosys campus

08:30 Walk through yesterdays process with
tools automation prototyped overnight
from yesterdays workshop and agree

12:30 Lunch

* Repeat for 14 days

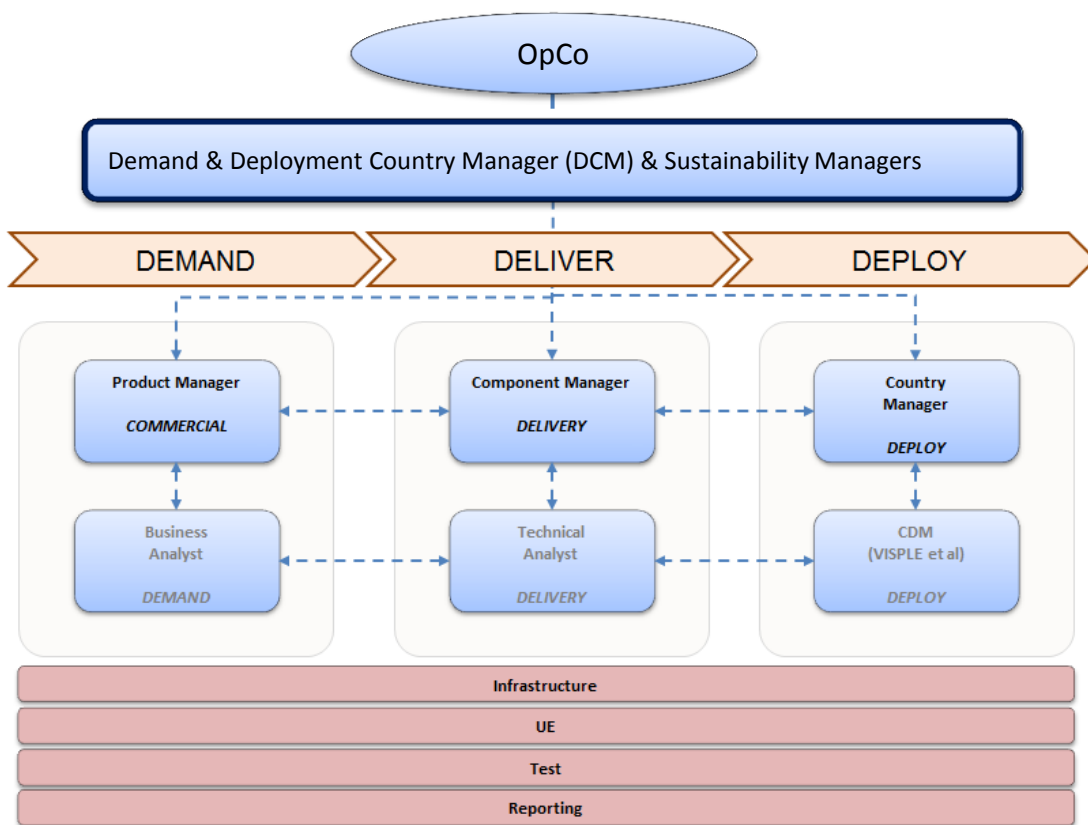

Infosys, Rational and customer consultatively reworked the processes and tooling approach

Governance & Relationship Management

The Demand & Deployment Country Manager (DCM) provided by Infosys acts as a consistent governance & relationship manager throughout the Online programme lifecycle to continue the momentum of the programme. This horizontal focus complements the vertically-focused Component Managers as well as the other managers in the programme governance structure.

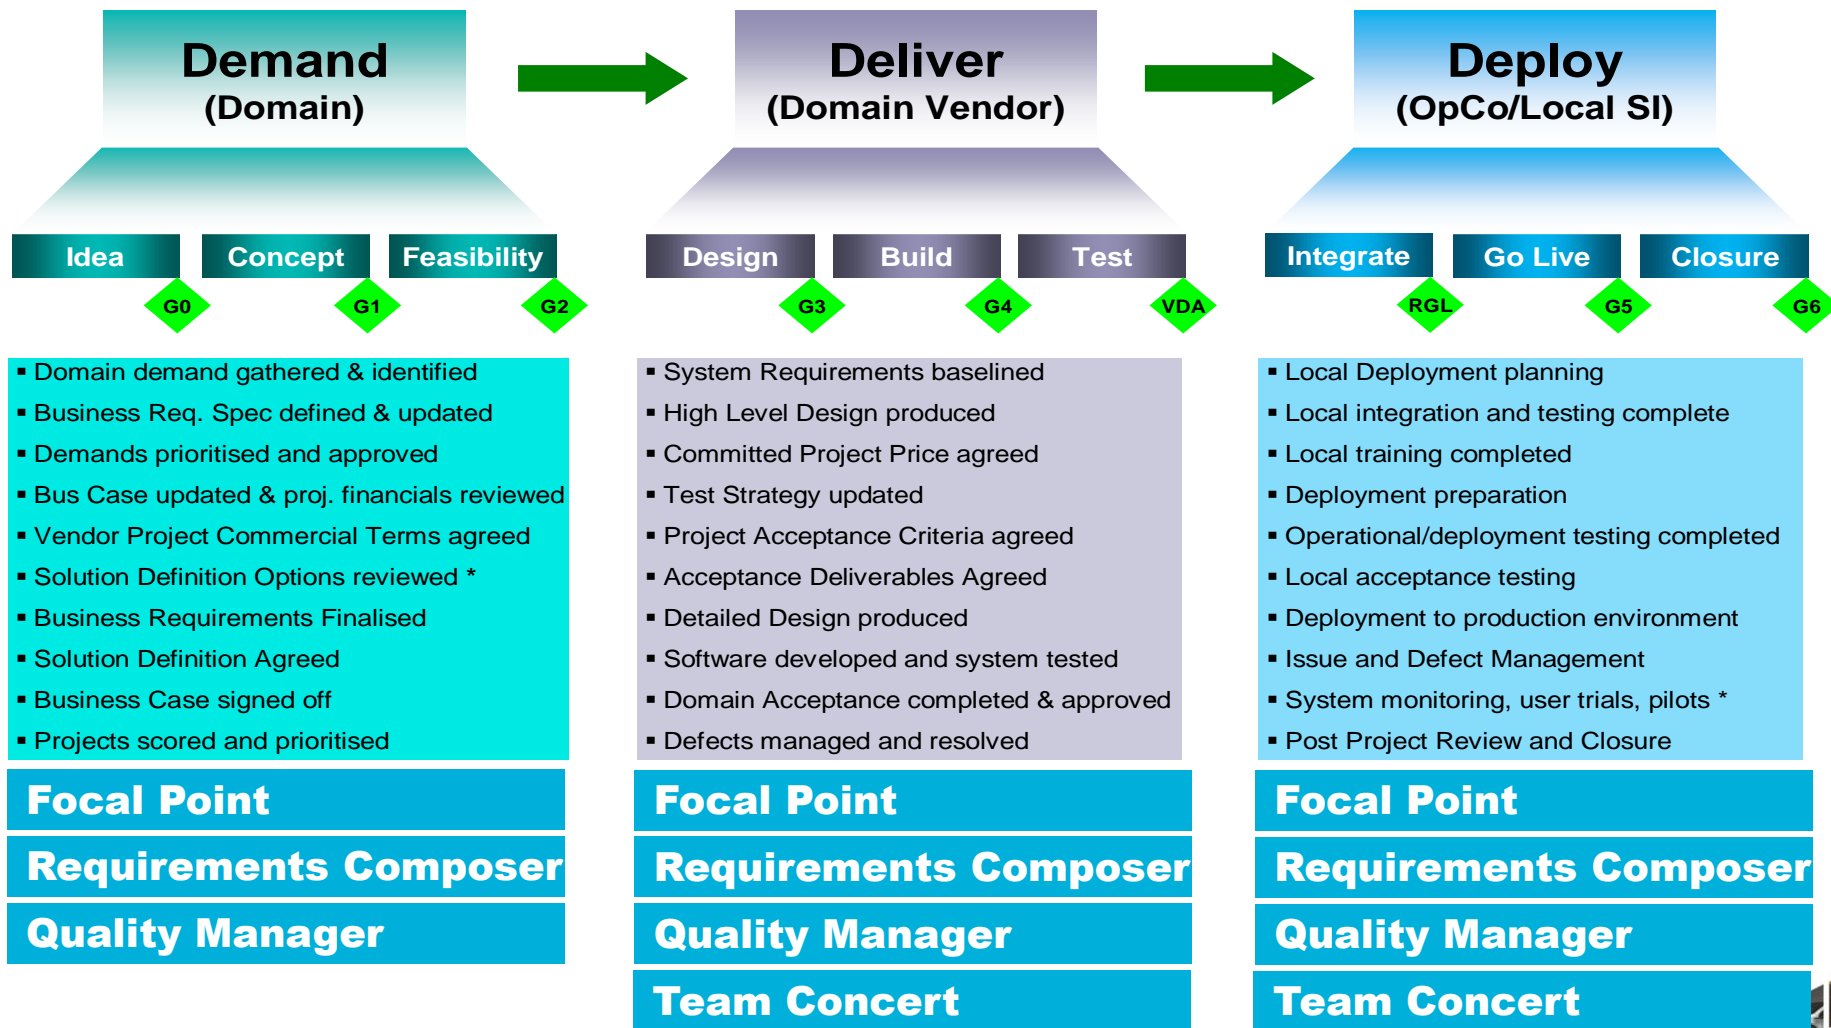

OpCo = Operating Company

DCM responsibilities:

- OpCo Relationship Management (end-to-end)
 - Coordinates the touch points with the local OpCo throughout the Online programme
 - Owns communication of timeline commitments
 - Provides weekly programme updates to key stakeholders on “progress status”
- Promoting and sharing “Best Practices”
- Project Planning and Delivery
 - Own end-to-end (integrated) component delivery plan for the local OpCo (spanning multiple components)
 - Collaborate with Commercial (Product) Leads, Component (Delivery) Leads, and Local SI Leads to define end-to-end project plans, milestones, and deliverables as per the client’s gating process
 - Maintain overall local OpCo-specific delivery plan with updates
 - Operational Readiness

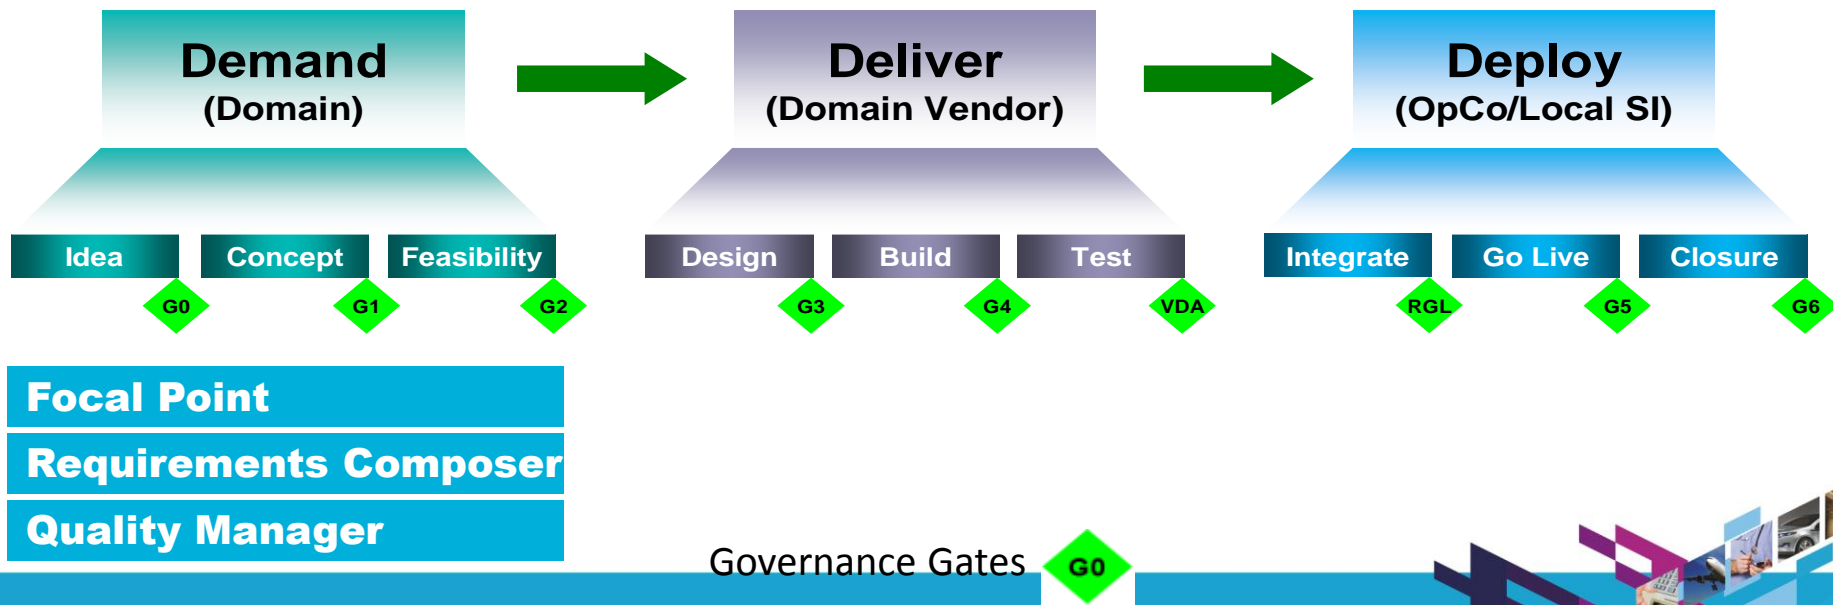

Delivery Model – Demand, Deliver, Deploy

Automation starts with Rational Focal Point to Gate 2

Creating a **single funnel of ideas** across the business to **create products not projects**

Never underestimate how hard getting hardware is!

We were saved by the IBM SmartCloud

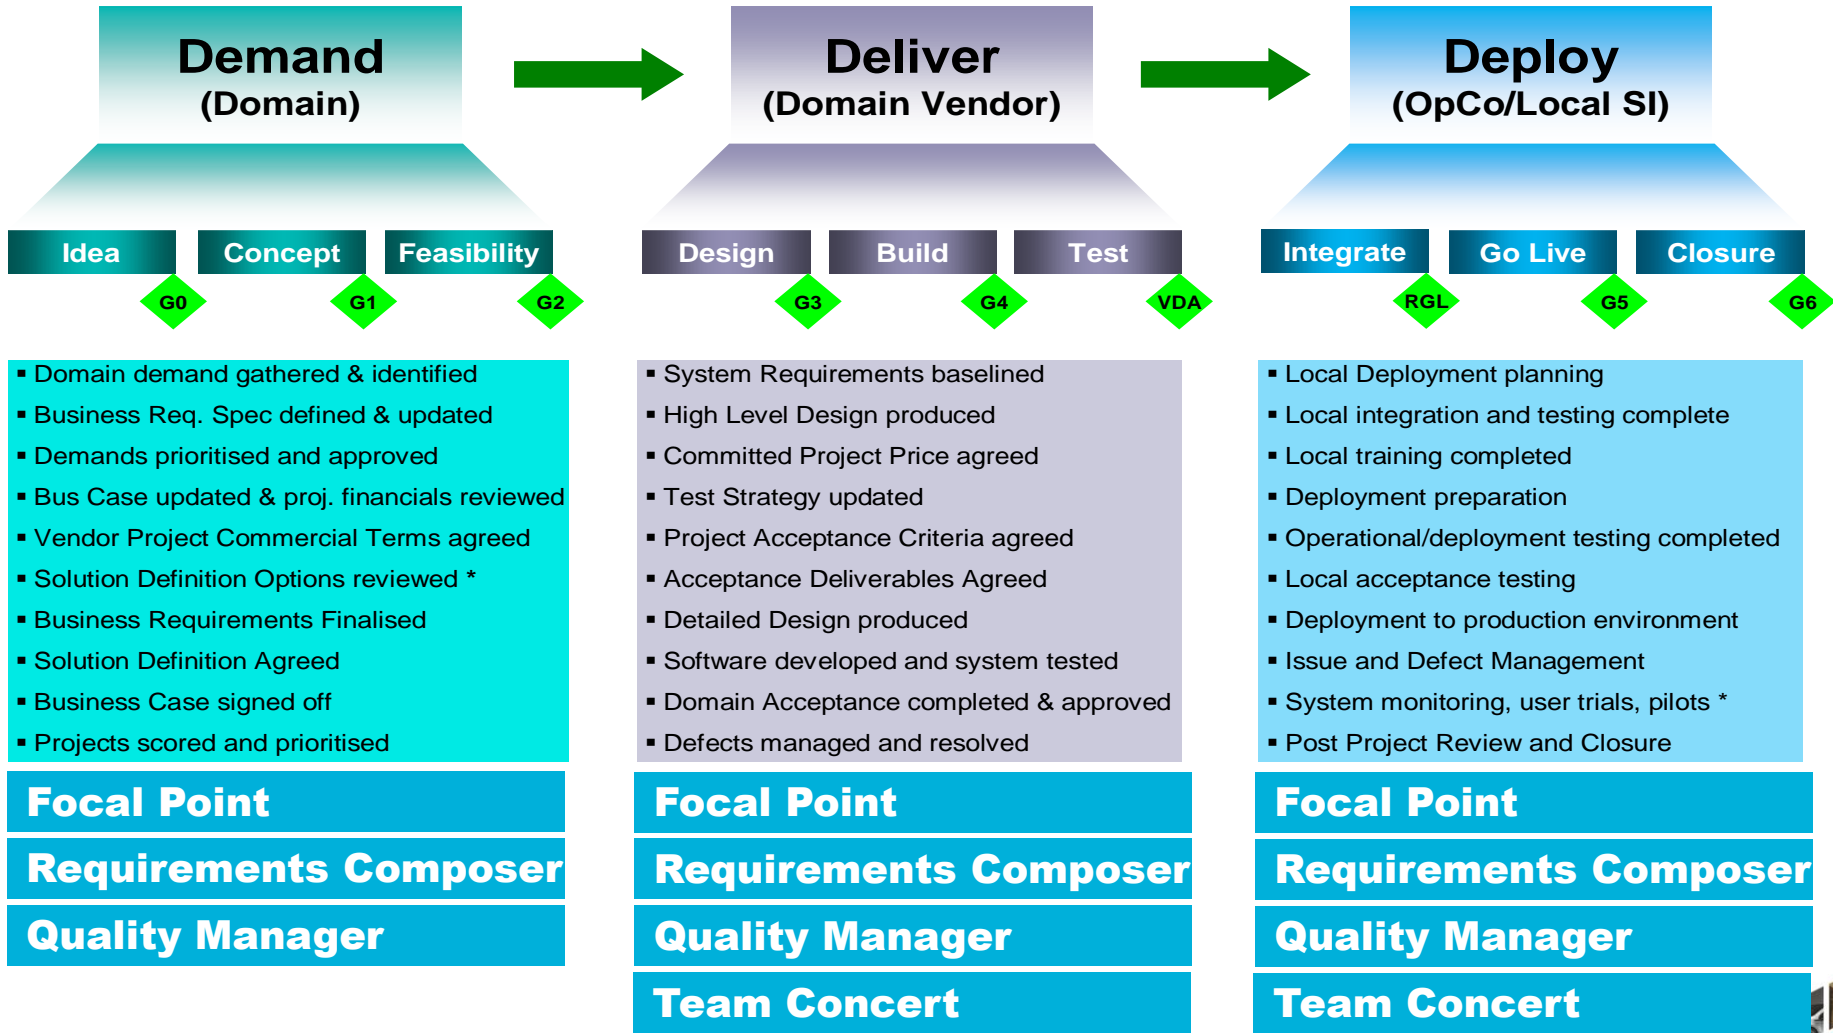

Implementing the common solution represents a significant saving in time to launch the capability

Utilising the Telco solution and expertise can reduce both implementation time and risk

The automation & traceability are critical

Rational had much more to offer

1. End to End collaborative environment
2. Streamlined demand capture
3. Simplified impact analysis
4. Real-time frictionless status reporting
5. Automated governance workflow

Evidence of success

- Rational Tool **Implementation** Across the **Organisation**
- Rational has the **Master Copy** of **Demand** and **Roadmap**

Some Key Takeaways

1. Think of these programme as software supply chains
2. Invest early in a sustainable coalition between you, the delivery partner and your Rational team
3. Focus attention on the hand-offs, the seams between parties and automate them
4. Live reporting of status – appropriate transparency between business, I.T. and the delivery partner is worth it
5. Build the process and the development tooling together – they're symbiotic
6. The tooling needs to be integrated and is simple as possible, no simpler: Jazz at it's best
