IBM

IBM System z Solution Edition for WebSphere

A ready to go solution that combines System z technology, with IBM's WebSphere Application Server, which provides a clearly defined and competitively priced package to help you simplify development, provide a high performance environment with Intelligent Management to help you to build, reuse, run, integrate and manage applications and services. WebSphere Application Server for z/OS leverages z/OS qualities of service to achieve optimized performance and continuous availability for your mission-critical applications.

Highlights

Only WebSphere® Application Server has the three foundational attributes to enable robust and agile business applications:

- *Simplified Development: Increase developer productivity with a proven, standards-based platform. WebSphere Application Server V7 offers enhanced support for standards, emerging technology and a choice of development frameworks that simplifies programming models to increase developer productivity. Integral tooling makes the most of existing technology skills for rapid time-to-value.*

- *High Performance: Keep your business agile in a constantly changing environment. WebSphere Application Server V7 provides a fast, reliable, available, secure and scalable environment that enables development and application efficiencies so that businesses can do more with fewer resources, and with Unparalleled Performance, you can do more with less. WebSphere Application Server V7 delivers optimized runtime performance through provisioning, web services, and EJB3 enhancements which can result in fewer energy consuming processors performing the same workloads of previous versions.*

- *Intelligent Management: WebSphere Application Server V7 offers a simplified infrastructure, flexible and effective application control and runtime efficiency so you can respond to evolving business needs with infrastructure and application intelligence.*

- *Agile SOA environment provides a fast, flexible, secure, scalable and solid foundation for service oriented architecture (SOA) to align the advancements of business and IT.*

From business critical and key enterprise-wide applications to the smallest departmental level applications, The IBM® System z® with WebSphere Application Server offers the highest levels of reliability, availability, security, and scalability when compared to other solutions.

Core to these foundational attributes is a unique focus on investment protection. In any economy businesses need to make decisions that leverage investments from the past to quickly and effectively respond to the future. Thus, businesses need technology that drives business agility and a smarter business outcome.

Finally System z and WebSphere offers peace of mind with strong rock-solid security, with out-of-the-box security configurations.

The Solution Edition for WebSphere

Combines System z technology, with IBM's WebSphere Application Server, offering your company the business agility to provide your developers and IT Architects an innovative, performance-based foundation to build, reuse, run, integrate and manage Service Oriented Architecture (SOA) applications and services.

Business Value

This Solution Edition offering leverages the inherent strengths of System z and WebSphere to provide your business with strong, rock-solid security. You can rest assured that applications and data are secure from attack. Our "Out of the box" security configurations and user registry, compliance with government standards, and stringent Web Services Security offer you peace-of-mind. New security capabilities add deeper levels of management, user governance and auditing to help decrease system vulnerabilities while maximizing your developers productivity.

Your Complete Solution

This offering incorporates the required underlying hardware and maintenance with a customized software stack to provide you a foundation for growth for your business.
