Agenda

- ▶ **Where Are We Today?**
- ▶ **Where Are We Going in the Future?**
- ▶ **How Are We Going to Get There?**

Who is Using VMware & What Are They Using it For?

100,000+ VMware customers

- > 100% of Fortune 100
- > 92% of Fortune 1000

85% use VMware in production

54% VMware as the default application platform

67% of all customers using central management in production

59% use live migration in production

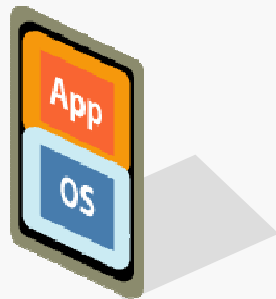

Changing the Nature of Computing

How Does it Work?

VMware...

- > Decouples software from hardware
- > Encapsulates Operating Systems and applications into “Virtual Machines”

A Server or Desktop
Virtual Machine

Without VMware

- > All require same power
- > All emit same heat
- > All require physical space
- > Setup, (re-)configuration
- > Maintenance, support...

With VMware

- > Flexibility
- > Rapid provisioning
- > High Availability
- > Disaster Recovery

- > Automation
- > Systems Management integration
- > Adaptive Datacenter

The VMware Effect: Customer Breakthroughs

CIO Survey: outlook for flat '09 IT budgets

CIO survey indicates flat

According to our 3Q08 CIO survey, budgets to be flat YoY (+0.5%). Interviews were conducted through expectations were lowered, but remained in positive territory for progress, and plan to spend on virtualization, and infrastructure.

Indications for

Since the beginning of the year, which was surprising given the global financial crisis, CIOs surveyed believe that a near-term quarter budget

Software

Software spending is expected to remain flat as CIOs focus on efficiency and cost-cutting. However, as well as software, CIOs are also looking for efficient pricing models.

Virtualization adoption increasing

93% of the CIO respondents said they are now using virtualization technology in their x86 server environments, up from 91% surveyed in 2Q08 and 83% in 1Q08. In our opinion, the current environment has moved virtualization toward the top of the priority list for CIOs, and only 29% of x86 servers are currently virtualized. However, the number of virtualized servers is expected to nearly double in the next two years to 59%. Our survey shows that 67% of CIOs are using blade servers. We believe that HP is well positioned in the blade server market (~50% share), as evidenced by the recent share gains driven by HP's c-Class blades.

“The current environment has moved virtualization toward the top of the priority list for CIOs.”

Independent Insight: IT Spending Survey

Goldman Sachs

November 2, 2008

“Total cost of ownership (TCO) reductions will be a key driver of the acceleration in server virtualization deployments as CIOs are forced to cut capital spending and reign in management, administrative and power/ cooling costs.”

...the TCO of the server stack... aggressive penetration of virtualization compared to what we have seen to date. Our sense is that total cost of ownership (TCO) reductions will be a key driver of the acceleration in server virtualization deployments as CIOs are forced to cut capital spending and reign in management, administrative, and power/cooling costs. In our VMware edition ("Ed") the aggressive, but slowing growth & valuation a drag"; published August 11, 2008), our base-line analysis showed a 38% reduction in TCO, while a higher compression ratio of physical to virtual servers could allow the savings to increase to 46%-58%. Avoidance of PC server purchases is the largest source of savings, followed by reduced management and support costs which more than offset the incremental investment in the server virtualization software support itself and storage.

The Desktop Dilemma

The future of client computing

- IT managers faced with complexity: desktops vs. notebooks, Windows vs. Mac, Win32 apps vs. web apps
- Users want their desktop to follow them, not the device
- IT needs to provide centralized management for all desktops
- VDI is the first step towards the universal client

Breakthrough results extend to the desktop

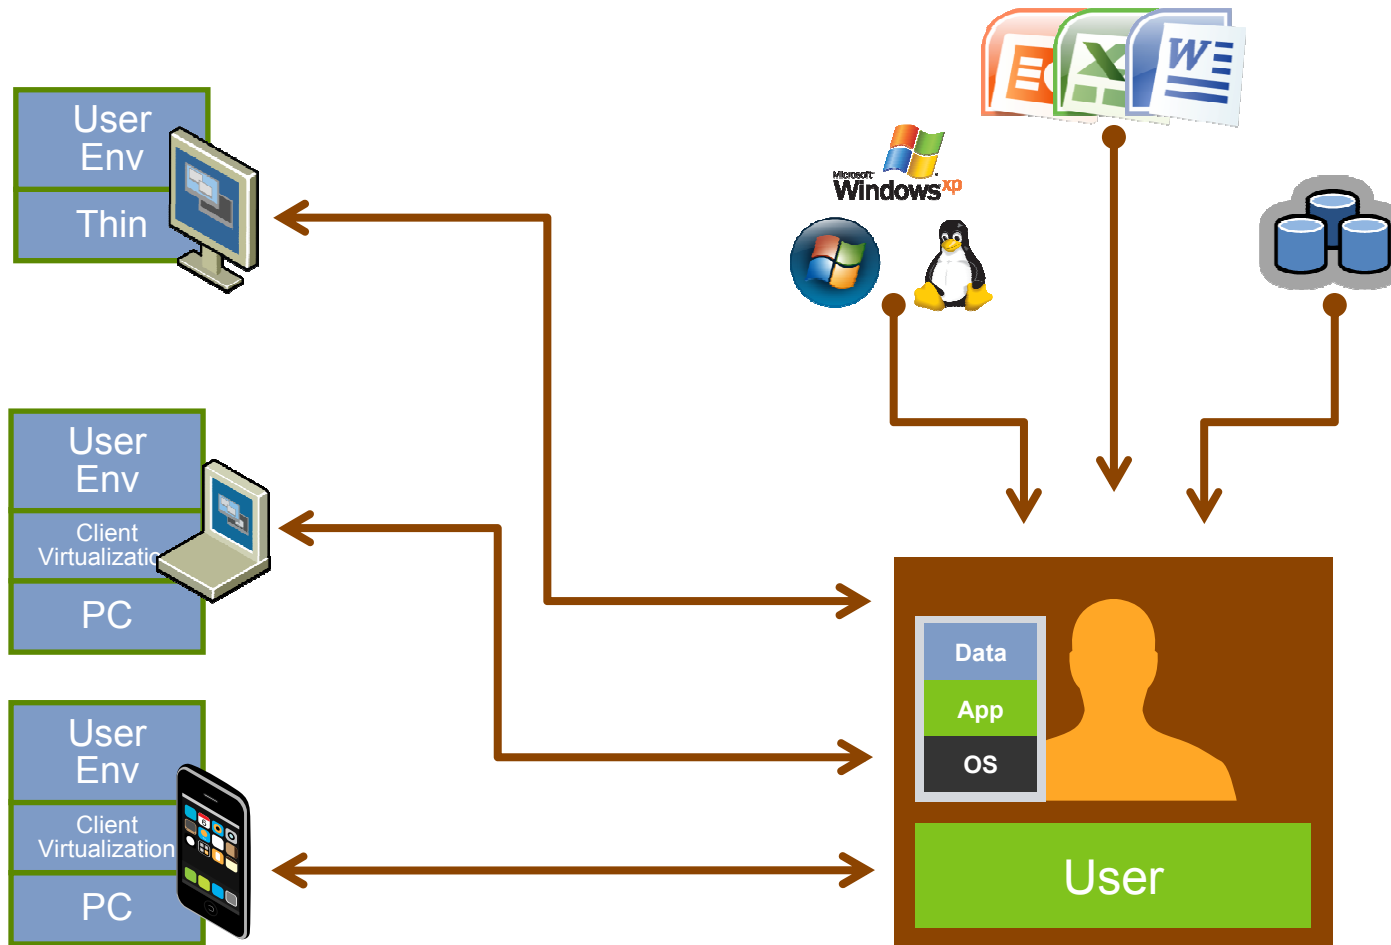

How it works:

- ▶ Desktop VMs are hosted on servers
- ▶ Users access their virtual PC via a thin client or PC

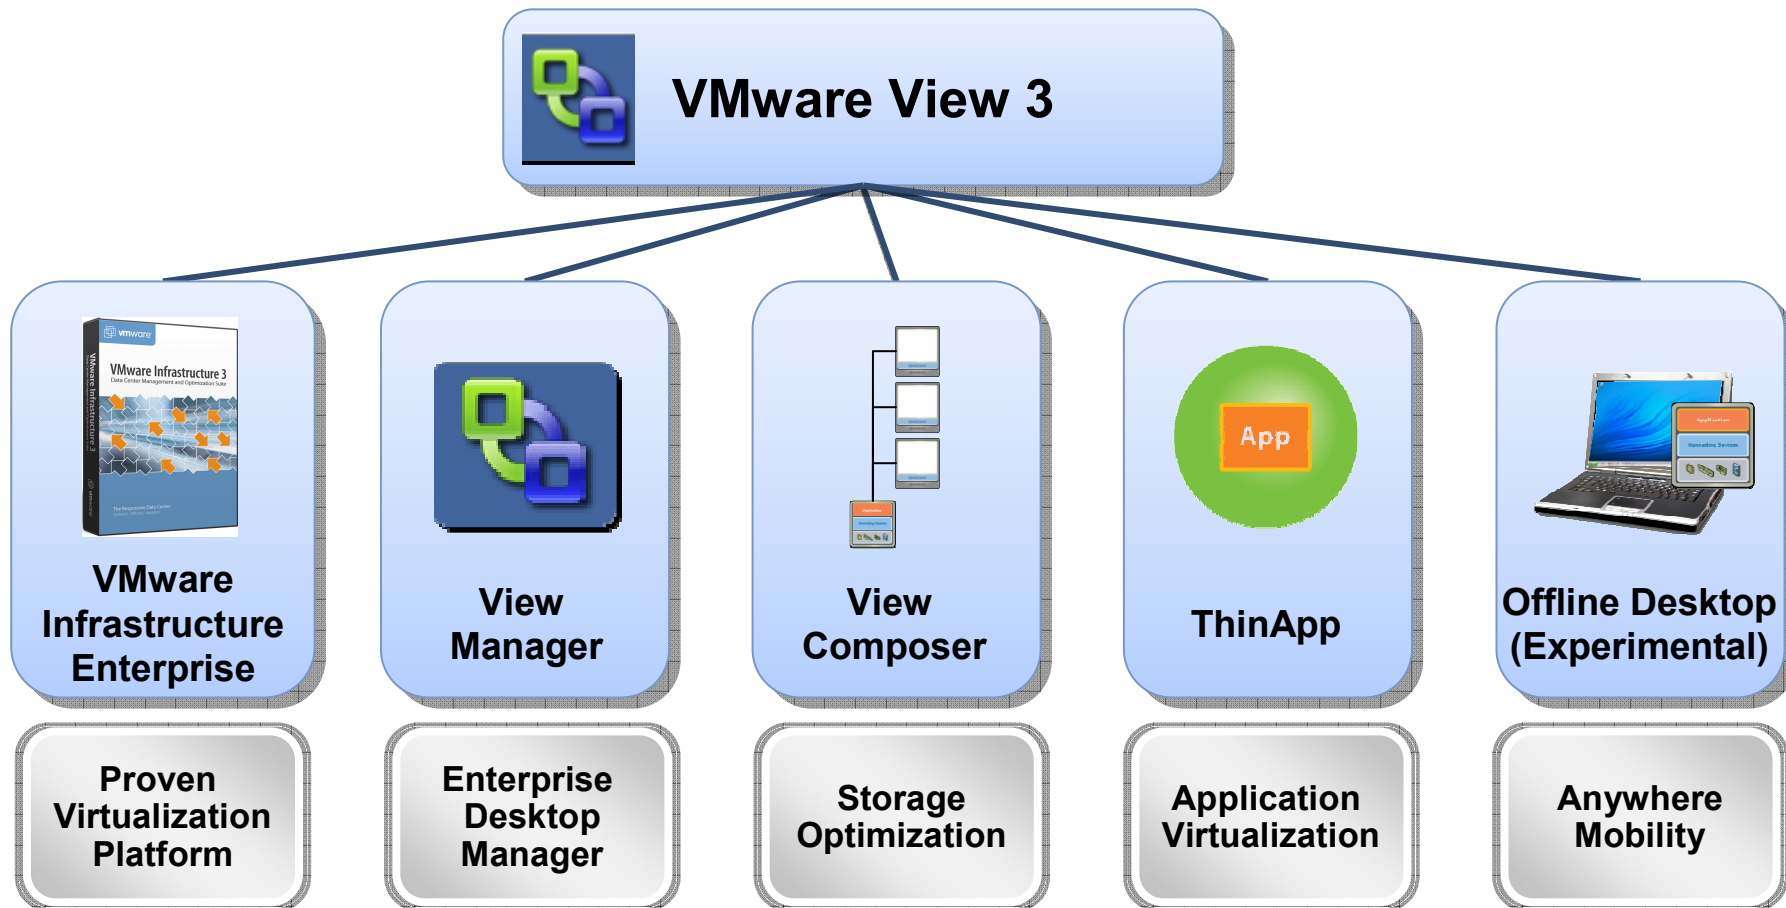

Results:

- ▶ Company data is secure in the data center
- ▶ Desktop provisioning takes minutes
- ▶ Desktop management is simplified
- ▶ Costs go down.
