Optimising the World's Infrastructure

[27 May 2010 London]

IBM Vision for a Smarter Planet ...

“Every human being, company, organization, city, nation, natural system and man-made system is becoming interconnected, instrumented and intelligent. This is leading to new savings and efficiency—but perhaps as important, new possibilities for progress.”

The world is flatter.

The world is smaller.

The world is getting smarter.

Because it can.

Because it must.

Because we want it to.

Asset management becomes ever more important...

To drive an effective return, many organizations work to maximize their effectiveness of their capital assets across the asset lifecycle

Asset management is a business discipline related to managing an enterprises assets over their lifecycle from design, build, procurement, operation, maintenance, modification, and disposal.

...across all Asset Classes...

Real Estate and Facilities

Facilities, buildings, warehouses

Infrastructure

Railways, Electric / Gas Distribution,
Highways, Telecom, Water

Plant and Production

Manufacturing, Chemical, Petroleum,
Electronics, Food

Mobile Assets

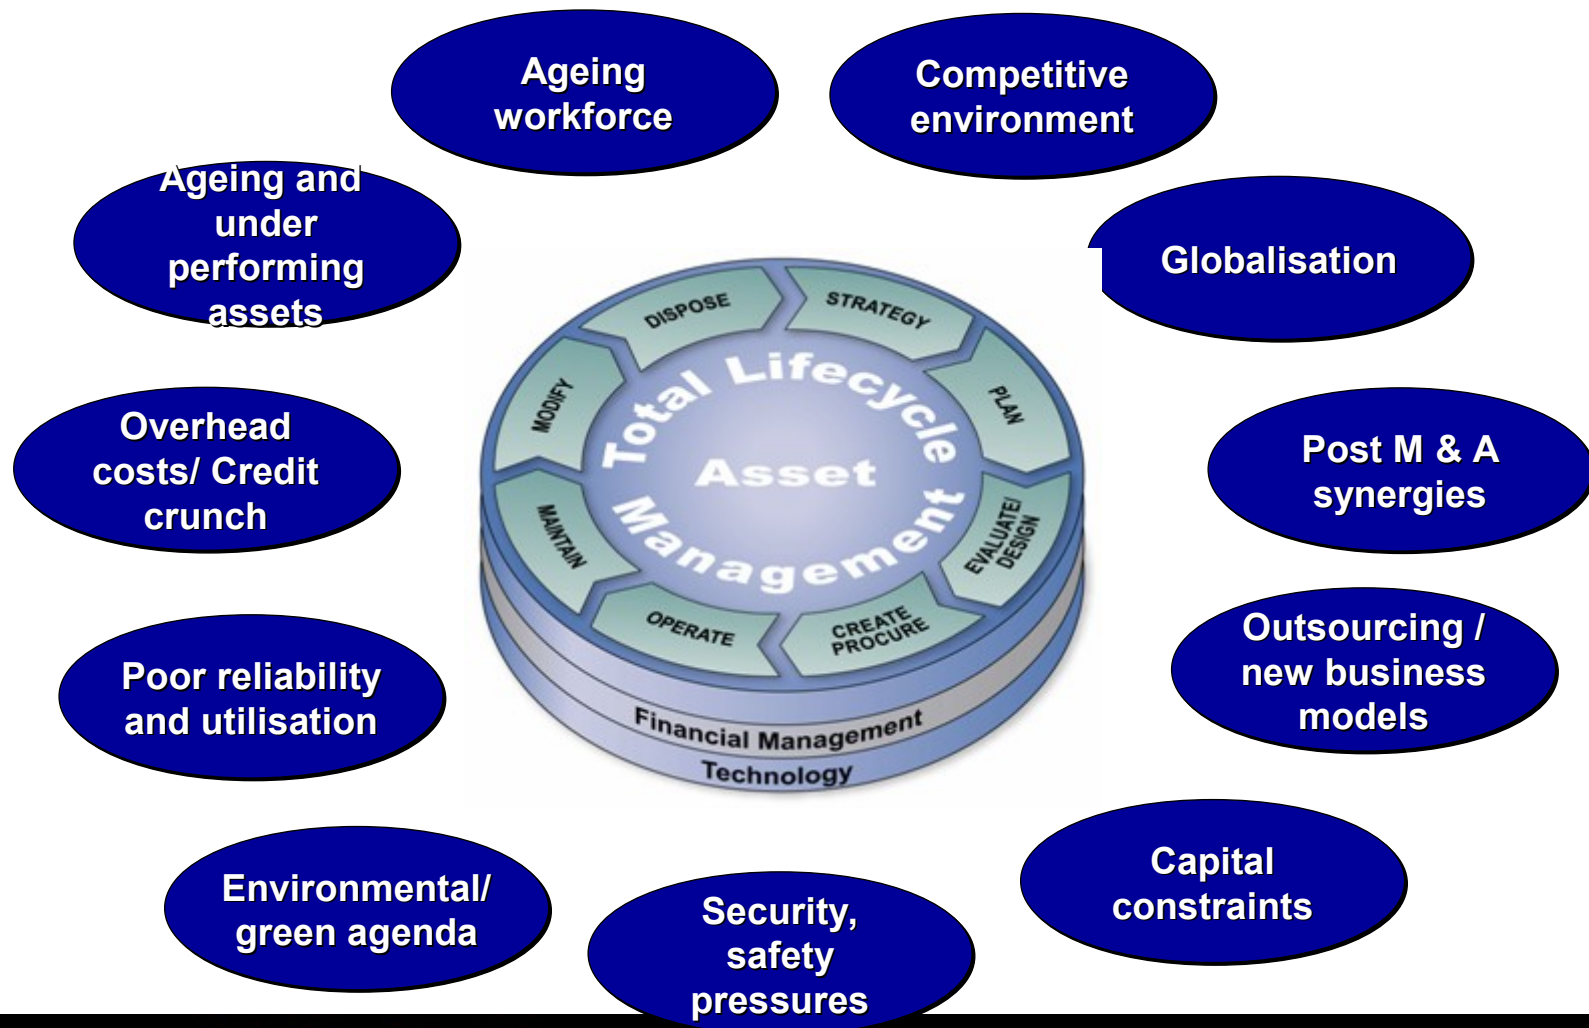

Military, Airlines, Rail

Information Technology

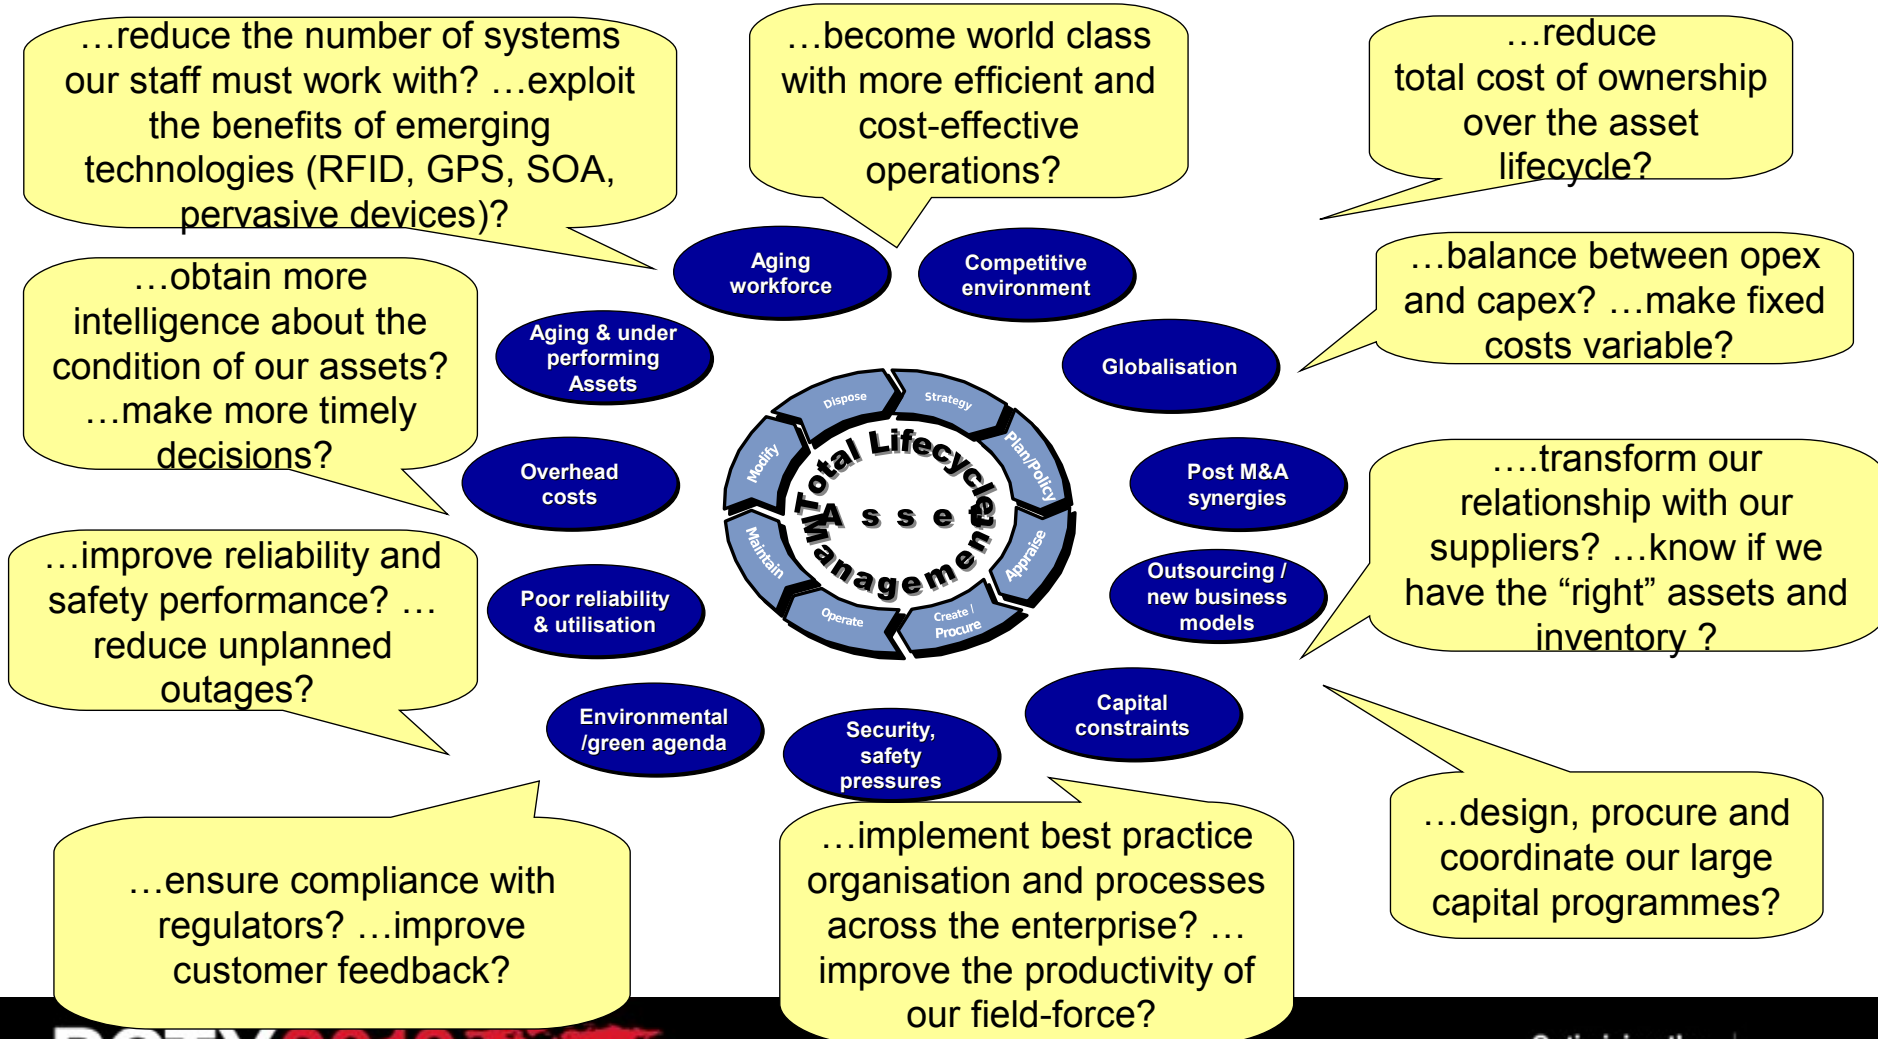

PCs, Networks, Routers,
Applications, Auto Discovery,
Service Desk

...with major areas of concern common across industries within an rapidly changing world ...

...raising questions across the asset life-cycle...

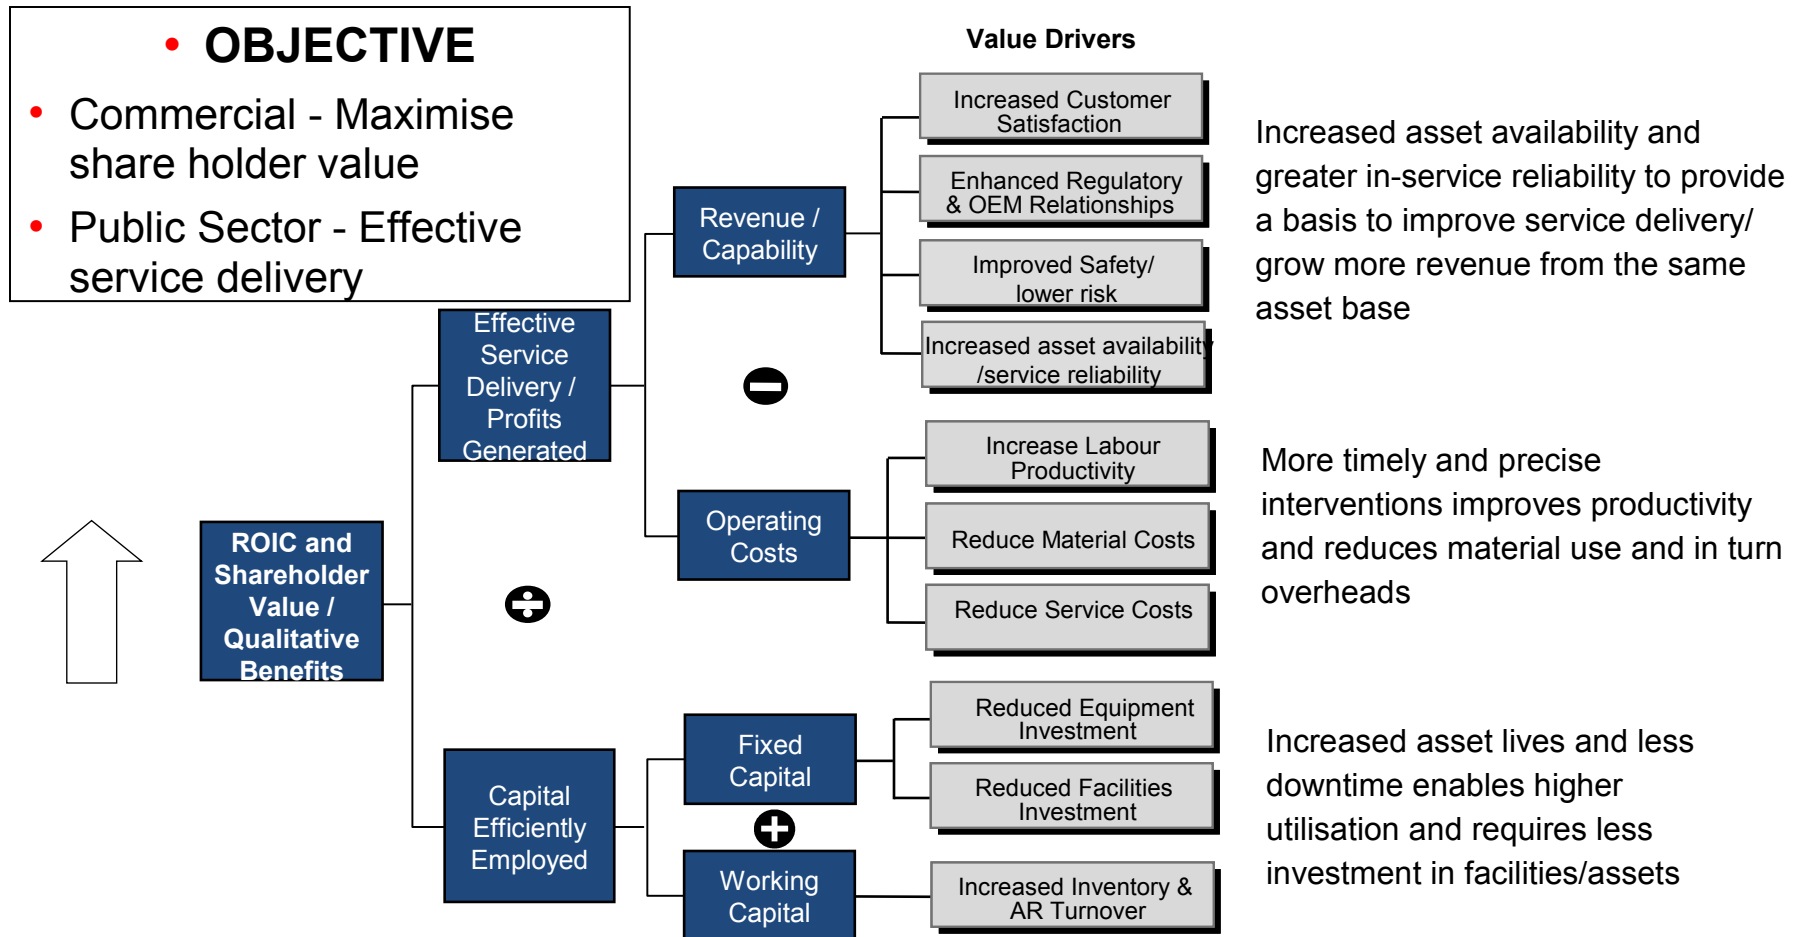

How can I....

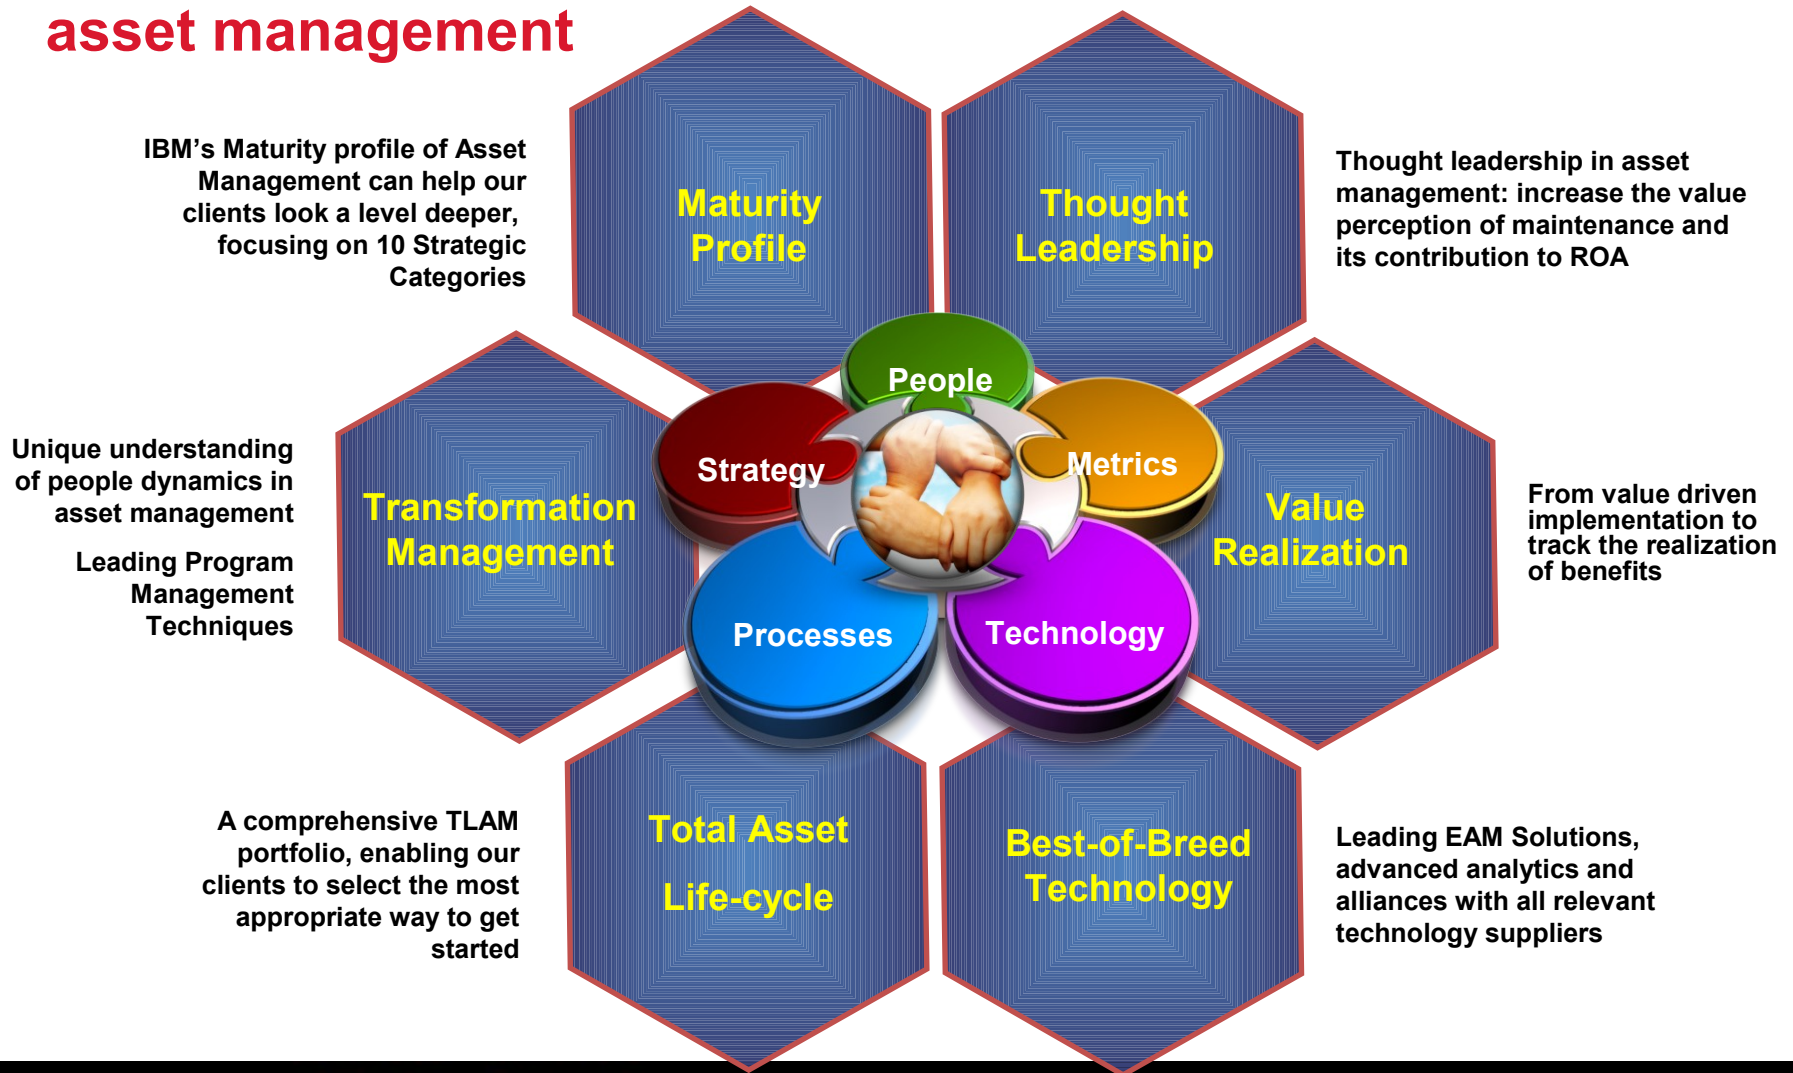

IBM has helped leading companies around to globe to travel the Maturity Path from Innocence to Excellence

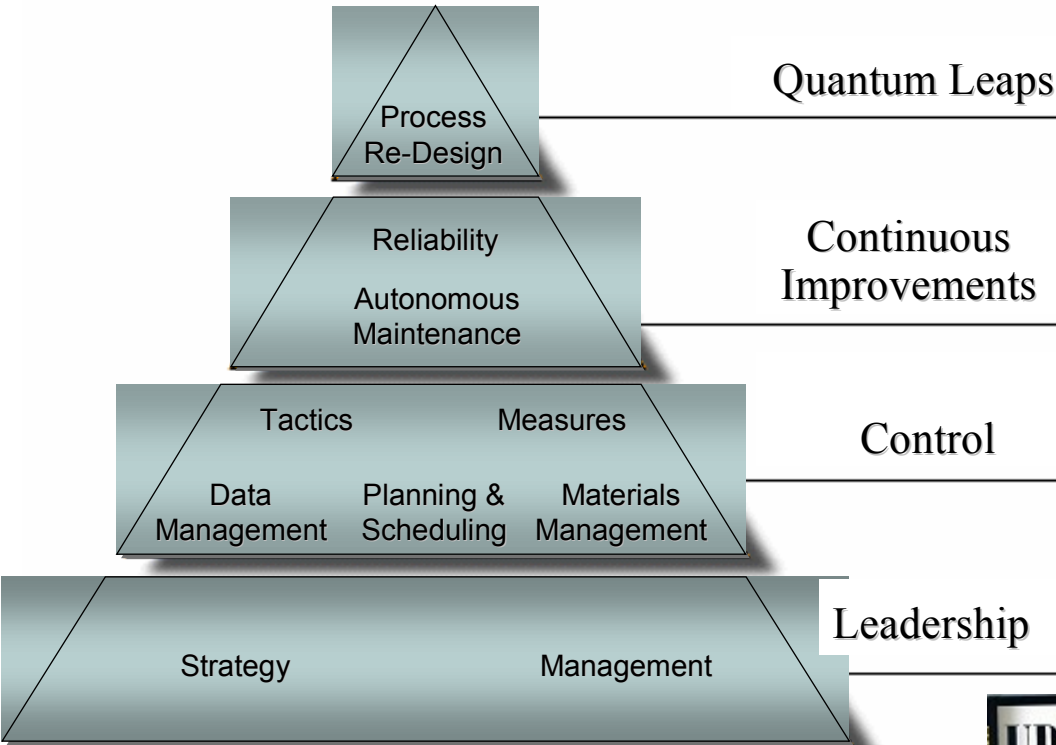

Experience dictates that a focus on Asset Management can significantly help an asset intensive organization's bottom line.

IBM Approach for Smart Asset Management – comprehensive methodology and unique capabilities to achieve excellence in asset management

IBM's Maturity Profile for Asset Management can help our clients look a level deeper, focusing on 10 Strategic Categories

Strategic Categories

1. Strategy
2. Management
3. Data Management
4. Materials Management
5. Planning & Scheduling
6. Tactics
7. Measure
8. Autonomous Maintenance
9. Reliability
10. Process Re-Design

amcoe
Asset Management Center of Excellence

Maturity Model

1. Strategy
2. Organization/Management
3. Data Management
4. Maintenance Tactics
5. Materials Management
6. Planning and Scheduling
7. Key Performance Indicators
8. Reliability Center Maintenance
9. Autonomous Maintenance
10. Process Re-design

Rating Levels	VI Innocence	IV Awareness	III Understanding	II Competence	Exc
1.Strategy	Mostly Reactive Breakdown Maintenance	Prevent Maintenance Improvement Program	Annual Improvement Plan	Long Term Improvement Plan	Established and Communicated Maintenance and Asset Strategy
2. Organization / Management	Highly Centralized	Partly Centralized for Some Trades	Decentralized Mixed Trade Teams	Some Level of Multi-Skilled Staff	Multi-Skilled Independent Trades
3. Data Mgmt / IT	Manual or Ad-hoc specialty Systems	A "System" that Allows for Some Scheduling and PartsTracking	Fully Functional Asset Mgmt. Stand Alone System	Fully Functional Asset Mgmt System linked to Financials and/or Inventory Systems	Fully Integrated to common databases Data Standards in Place
4. Maintenance Tactics	Annual S/D Inspections Only	Time Based Inspections	Time and Use Based Inspections Some - NDT	Some CBM Some Prev. Maint. Few Surprises	All Tactics Based on Analysis
5. Materials Management	*Absence of storeroom management practices	*Some storeroom controls *Lack of performance measurements *Turns less than 1.0	System computerized Stock levels set – no Maint. Input. Lead time and Safety Stock Levels set – Rare;	*Alliances developed *(Free Issues) *Streamlined processes *Material Delivery Process Established *Automatic Matching of Invoices *Compurtized inventory control system	*Service levels 95%+ *On line material requisitioning *Turns exceed 1.5
6. Planning and Scheduling	Little or No Formal Planning, Scheduling, or Engineering Support	Some Troubling Shooting Support Inspection Scheduling	Maintenance Planning Group Established Ad-hoc Engineering	Solid General Planning and Scheduling Job Planning with Engineering Support	Long Term Major Project Planning for both Maintenance and Engineering
7. Performance Measures	No Systematic Approach. Maint. Cost Not Available	Some Downtime / Reliability Records Maint. Costs Not Segregated	Downtime by Cause Maintenance Costs Available	Mean Time to Failure / Repair Records Available Separate Maintenance Costs	OEM Benchmarking Full Cost Database
8. Reliability Centered Maintenance	No Failure Records	Collect s Failure Data but make little use of it	Failure DB Established. Used for Analysis	Some FMECA used	RCM Program in Place Risk and Root Cause Analysis Program
9. Autonomous Maintenance	Directed Workforce No Teamwork Maint & Production relationship strained	Directed Workforce No Teamwork Good cooperation of Maint. And Production	Directed Workforce Some Teamwork Maint./ Production cooperation at working level	Self Directed teams Maint. / Production cooperation at all levels. Team work at organization levels	Decentralized teams Business based decisions Excellent cooperation with Maint. / Production Teamwork a hallmark of entire organization
10.Process Redesign	Processes not documented. Some procedures available High Reactive Work Percentat	Some processes documents. Moderate amount of procedures available High PM Workload	Processes Documented Planning and Scheduling disciplines are prevalent Medium amount of Reactive and PM Workload	Processes documented Evidence of periodic review. Procedures well documented and organized	Processes documented and coordinated with support areas (Inv. / Purc) Evidence of regular review

ID	Task Name	Start	Finish	2006	2007	2008
1	Genesis Corporation - Asset Management Implementation Plan	Fri 9/21/04	Fri 1/23/09	[Gantt bar]		
2	Project governance	Fri 9/21/04	Fri 7/19/06	[Gantt bar]		
12	MW - assign corporate contracts to Corporate Purchasing	Tue 9/19/04	Mon 5/18/06	[Gantt bar]		
16	MW - Centralize MRO purchasing	Mon 7/5/04	Fri 1/15/06	[Gantt bar]		
24	CG - Implement a hybrid organizational structure	Tue 9/19/04	Tue 8/29/05	[Gantt bar]		
33	O2 - Conduct a maintenance skills needs analysis	Tue 9/19/04	Mon 10/30/05	[Gantt bar]		
38	MW - hire three HRM technicians	Tue 9/19/05	Mon 8/28/06	[Gantt bar]		
43	O1 - Formalize maintenance training in each area	Tue 9/19/05	Mon 5/14/06	[Gantt bar]		
48	I1 - Implement CMMS Prod	Mon 8/29/04	Fri 10/23/04	[Gantt bar]		
67	MW - Implement a recognized catalogue naming convention	Mon 8/9/04	Mon 1/27/06	[Gantt bar]		
73	P2 - Define work history details to be recorded by technicians	Mon 9/14/04	Fri 7/20/06	[Gantt bar]		
76	P1 - Implement condition work management processes	Mon 7/19/04	Fri 3/4/06	[Gantt bar]		
90	MW - Implement warranty tracking	Fri 7/19/04	Fri 10/23/04	[Gantt bar]		
94	K1 - Implement a balanced set of key performance indicators	Mon 8/29/04	Fri 1/23/06	[Gantt bar]		
102	MW - Establish a virtual central warehouse	Mon 7/5/04	Mon 1/15/06	[Gantt bar]		
111	S2 - Implement process to involve maintenance in new equipment	Mon 3/7/06	Fri 4/8/06	[Gantt bar]		
116	K1 - Implement Reliability Central Maintenance	Mon 1/16/06	Wed 7/12/06	[Gantt bar]		
123	MW - identify critical spares	Tue 1/24/04	Mon 4/29/05	[Gantt bar]		
128	E1 - Identify Operator maintenance tasks	Thu 1/10/05	Wed 1/18/06	[Gantt bar]		
133	S1 - Implement Lifecycle Costing (LCC)	Mon 1/16/06	Fri 3/24/06	[Gantt bar]		
139	I1 - Phase 2 - Integration of CMMS Prod to Baan	Mon 8/29/06	Fri 10/7/06	[Gantt bar]		
	Comments to CMMS Prod	Mon 9/11/06	Fri 1/23/09	[Gantt bar]

The Asset Management Eightfold path to for a Smarter Planet

	SCC	TDBC	ASC	New customers
Customers	Estate Management	Projects & Consultancy	Hard FM	Soft FM
Output spec	Manage demand/supply for EM	Manage demand/supply for Projects	Manage demand/supply for IFM	Set performance criteria/measure performance
Processes	Estate Management	Projects	Lifecycle & Minor Projects	Site Services
Delivery teams	Professional services	Major Projects	Hard FM Category plan	Soft FM Category Plan
Supply chain	Estate Management	Capital Projects	Facilities management	Dashboard & grid-down

Thought leadership in asset management: increase the value perception of maintenance and its contribution to ROA

Maintenance Philosophy Related Issues

Traditional Approach
Maintenance is about preserving physical assets
Routine maintenance is about preventing failures
The primary objective of the maintenance function is to optimize plant availability at minimum cost
The maintenance department on its own can develop a successful, lasting maintenance program

New Approach
Maintenance is about preserving the functions of assets
Routine maintenance is about avoiding, reducing or eliminating the consequences of failures
Maintenance affects all aspects of business effectiveness and risk – safety, environmental integrity, energy efficiency, product quality and customer service, not just plant availability and cost
A successful, lasting maintenance program can only be developed by maintainers and users of the assets working together

Leading Practices in Asset Management: a sample

- Workforce – Motivated Technical trades are shrinking or retiring
- Teaming – Maintenance, Operations, Engineering and Shared Services aligned and working together
- Skilled Workforce Culture – Recognize full value of Maintenance craft role

- Clear Enterprise Mission, Vision, Goals
- Corporate Standards - Standard Approach for Business Processes
- Long Term Strategic Plan (4 Years)
- Proactive maintenance approach

- Maintenance Planning – High compliance to plan and schedule
- Parts Management – High service levels and Inventory effectiveness, Inventory Turns managed
- Strong Sustainment, Health and Safety results
- Maintenance Execution – High levels of 2 calls and repeats
- Maintenance Planning –Emergency less than 5% planned maintenance more than 80%
- Processes – Well communicated to staff or upward
- Effective use of RCM, TPM and BPR methods

- Asset related costs well tracked
- Maintenance process KPIs contribute to a Balanced Scorecard
- Training leveraged where practical
- Benchmarks, Baselines used where practical

- Systems – Fully functional and integrated Asset Management systems
- Parts Management – High service levels and Inventory effectiveness, Inventory Turns managed
- Efficiency Tools – Leverage where practical
- Analysis Tools – Leveraged where practical

Value Realization: typically there are four initial areas that drive ROA – Driving costs down while we drive production, safety, environmental and regulatory compliance up

High Value Areas

- Effective planning and scheduling of work
- Spares & support materials management driven by planning & scheduling activity
- Proactive definition of what maintenance should be done to manage reasonably likely failures
- Process Automation and Optimization

Key to Success

- Mindset**
From traditional thinking to scientific, business-based thinking
- Integration**
Maintenance Planning and inventory must work as one
- Eliminate Barriers**
Cooperative approach among production, operations and engineering
- Strategic Approach**
Leading a well planned and managed change program
- Knowledge**
Understanding best practices in planning, scheduling, proactively identifying

IBM's asset intensive clients have benefited from our Value Realization approach

Business Scenarios	ROI Points	Customer Examples
Labor Utilization	Up 10-20%	<ul style="list-style-type: none"> A major US railroad saved US \$5M by better tracking labor to specific work
Asset Utilization	Up 3-5%	<ul style="list-style-type: none"> A large OEM reduced overhaul process time from 56 days to 21 days
Equipment purchases	Down 3-5%	<ul style="list-style-type: none"> A fleet management company saved US \$9.5M by meeting 100% availability
Warranty recoveries	Up 10-50%	<ul style="list-style-type: none"> A consumer products company increased warranty recovery 50%
Inventory needs	Down 20-30%	<ul style="list-style-type: none"> A large passenger railroad was able to identify US \$18M in excess or obsolete inventory
Inventory carrying costs	Down 5-20%	<ul style="list-style-type: none"> A nuclear power conglomerate reduced inventory value and associated carrying costs by 26%
Material Costs	Reduced 10-50%	<ul style="list-style-type: none"> A rail maintenance service company reduced costs 20% by optimizing material purchases.
Purchasing labor	Reduced 10-50%	<ul style="list-style-type: none"> A fleet management company reduced purchasing staff by 20%

“By unifying the management of all our IT and operational assets using IBM solutions, we can maintain an industry leadership position and improve quality of service for travelers. IBM asset management software has also helped us realize a higher percentage of recoverable fees and directly improve revenue as a result.”

McCarran International Airport

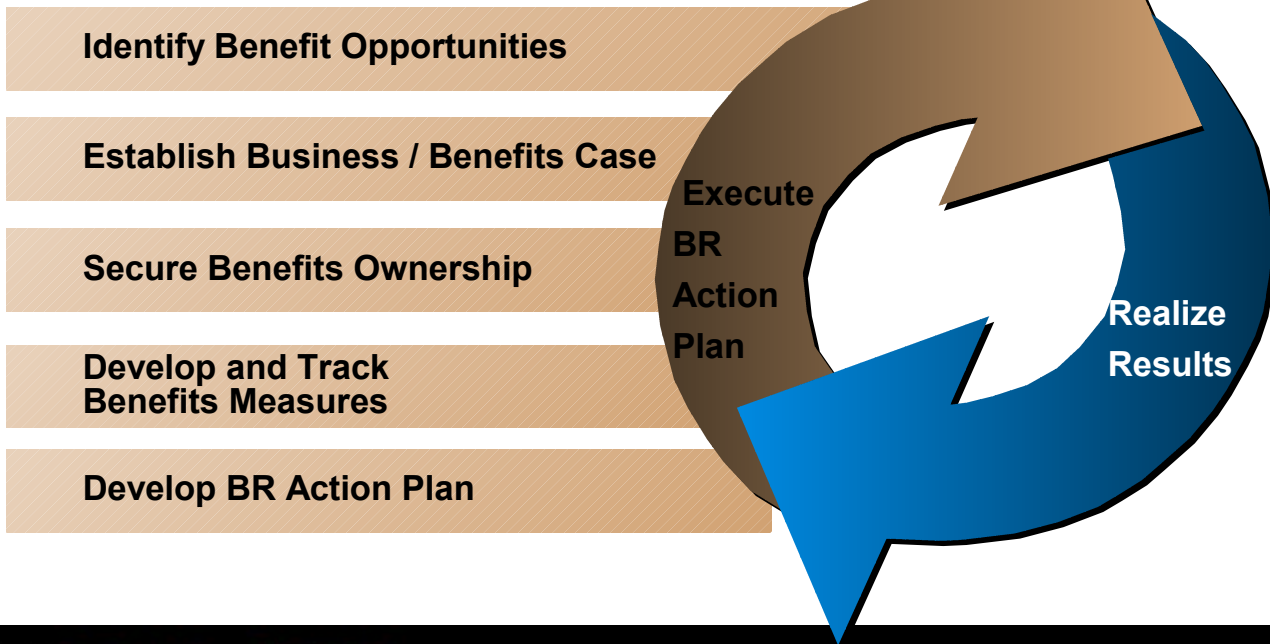

Value Realization is a structured, repeatable process applied to Asset Management Initiatives to maximize return on investment.

Identify Value

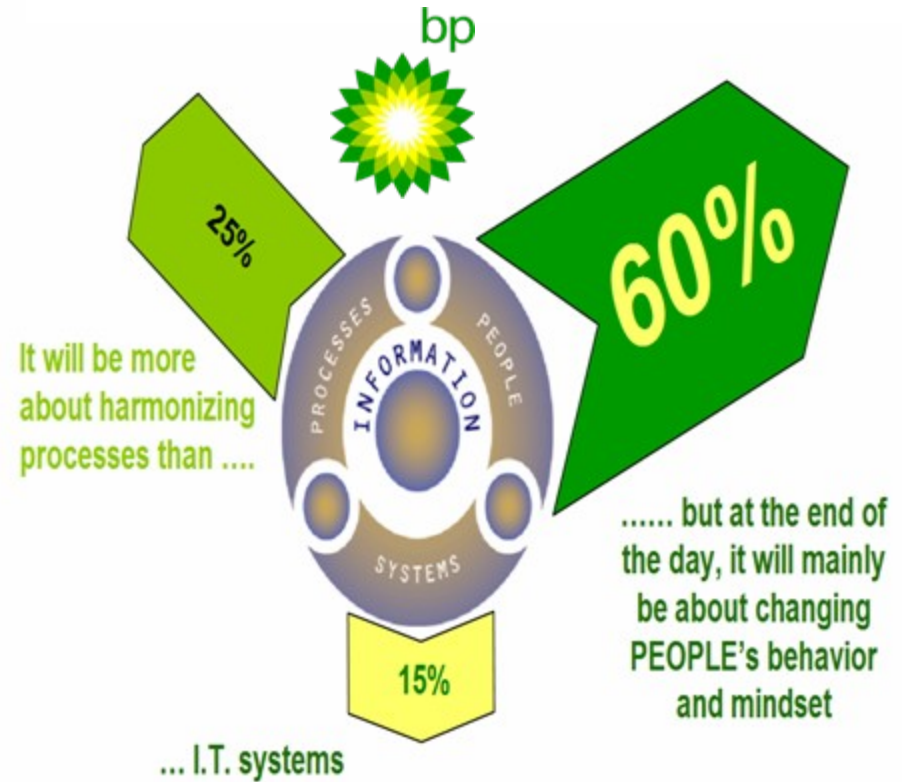

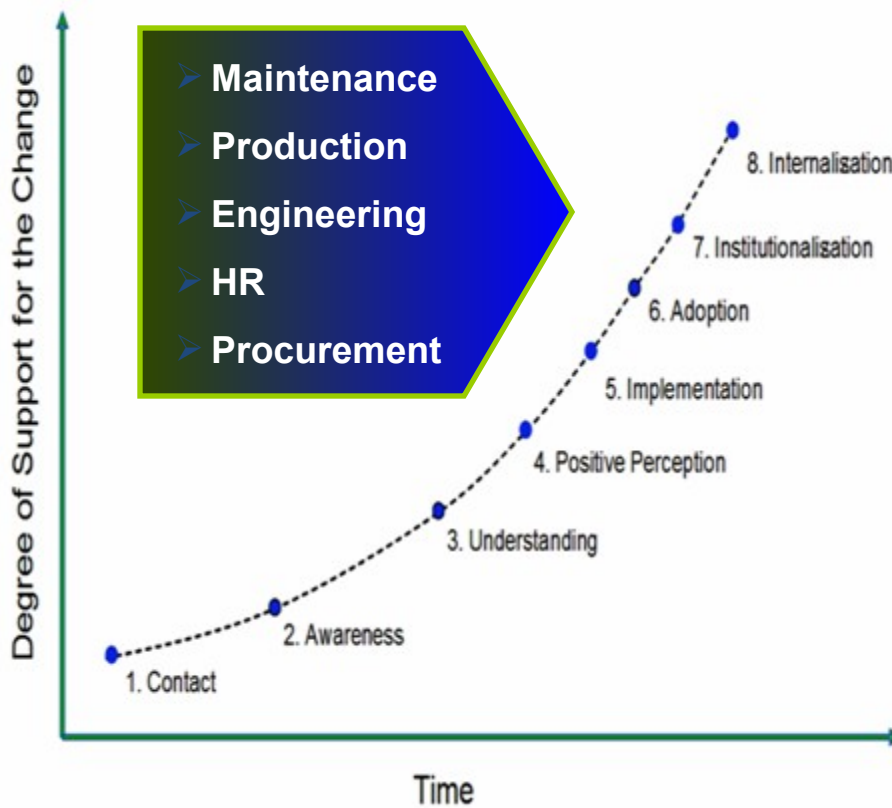

- Review Strategic Priorities
- Analyze Performance
- Evaluate Opportunities
- Develop Value Proposition

Drive and Realize Value

- Establish Performance targets Accountability
- Drive Value Delivery Actions
- Manage Performance Delivery
- Leverage Successes

Addressing the Transformation Management: understanding where each Stakeholder group is in their acceptance of the process change is key in determining to what degree risk actions should be to drive success

From instinct and intuition to fact driven decision

$$\min_{w_k} \max\{AT_i : i \in PO\}$$

$$s.t. \quad AT_j = \max\{AT_i + d_{ij}(w_k) : j \in \text{input}(i)\}$$

$$w_k^L \leq w_k \leq w_k^U$$

Mathematical Models

Maximo is a Complete Asset Management/ Service Management Solution

Allows organizations to seamlessly track and manage assets throughout their entire life cycle.

Supports both planned and unplanned maintenance activities, from initial service request and work order generation, through completion.

Supports all phases of procurement, including direct purchase and replenishment of inventory.

Allows end-users to submit new service requests, as well as track and update open service requests.

Tracks asset-related materials and their usage, allows for real-time knowledge of materials status.

Provides comprehensive functionality to fully manage vendor contracts.

J2EE Standards-based Service Oriented Architecture

What is a Formula for Smarter Asset Management?

$$P^3 + \frac{\text{Software}}{\text{Technology}} = \text{am}$$

People/Processes/Procedures PLUS Software over Technology EQUALS Smarter Asset Management¹

What is a Formula for Smarter Asset Management

Maturity Profile

- Understand where you are in your Maintenance Maturity
- Prioritize opportunities and execute a formal program

Total Asset Life-cycle

- Consider all aspects of TLAM in Asset planning
- Leverage RCM2 to effect optimal costs across the life-cycle

Thought Leadership

- Eightfold path to Smarter AM
- Increase the value perception of maintenance and its contribution to ROA
- Apply Leading practices in Asset Management

Best-of-Breed Technology

- Aligned with your maintenance maturity: leverage leading EAM Solutions, advanced analytics relevant technology
- Start with a leading CMMS solution – Maximo

Value Realization

- Target opportunities that positively effect Asset created value and maintenance costs
- Apply a formal benefits realization approach to reaching the target value

Transformation Management

- Apply strong transformation Management disciplines to change
- Apply strong Change Enablement disciplines to ensure success
