*Turning Product Development Into
Competitive Advantage:*

IBM Rational Solutions for Systems and Software Engineering in Aerospace & Defence

Reduce the Time, Cost and Risk of
Developing Profitable Products and Systems

Please Note:

IBM's statements regarding its plans, directions, and intent are subject to change or withdrawal without notice at IBM's sole discretion. Information regarding potential future products is intended to outline our general product direction and it should not be relied on in making a purchasing decision. The information mentioned regarding potential future products is not a commitment, promise, or legal obligation to deliver any material, code or functionality. Information about potential future products may not be incorporated into any contract. The development, release, and timing of any future features or functionality described for our products remains at our sole discretion.

A&D today

- Shrinking budgets
- Increased demands
- Do more for less

Agenda

- Collaborative product development platform
- Accelerated paths to value

Introduction to IBM Innovation Strategy

Integrated Product Management

BUSINESS PLANNING & TRANSFORMATION

Global optimization of product, process and organization

PRODUCT & SYSTEMS DEVELOPMENT

Designing, delivering and managing product value and differentiation

PRODUCT SUPPORT

Closing the loop between design and support

LIFECYCLE COLLABORATION

Automating processes across the ecosystem of system contributors

Collaborative mechanical, electronic and software lifecycle management

Design, deliver and manage smart products

Complexity Creates Development Challenges

Leading to cost overruns, schedule slips and quality issues

Poor requirements engineering = failed projects

Paper-based and manual processes hinder efficiency

Complex architecture is difficult to textually explain

Functionality is poorly distributed across components

Hardware/software integration is often late

Many organizations lack formalized practices

***Silos of people,
process, and projects***

Geographic Barriers

- Poor communication
- Language, culture, time
- Process gaps resulting in rework

Organizational Barriers

- Weak collaboration
- Poor project governance and LOB oversight
- Security of IP

Infrastructure Barriers

- Incompatible tools
- Unreliable access
- Lengthy on-boarding
- Inflexible integration

Rational Solutions for Systems and Software Engineering

Built on a core product set

Open Services for Lifecycle Collaboration

REQUIREMENTS MANAGEMENT

Manage all system requirements with full traceability across the lifecycle

Rational DOORS

QUALITY MANAGEMENT

Achieve "quality by design" with an integrated, automated testing process

Rational Quality Manager

ARCHITECTURE & DESIGN

Use modeling to validate requirements, architecture and design throughout the development process

Rational Rhapsody

COLLABORATION, PLANNING & CHANGE MANAGEMENT

Collaborate across diverse engineering disciplines and development teams

Rational Team Concert

Integrate

Collaborate

Optimize

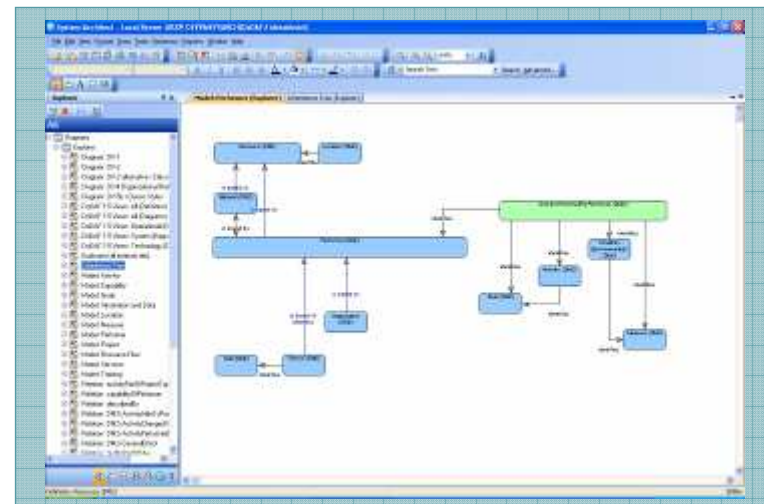

Best-of-breed capabilities, integrated on a common platform

Architecture First

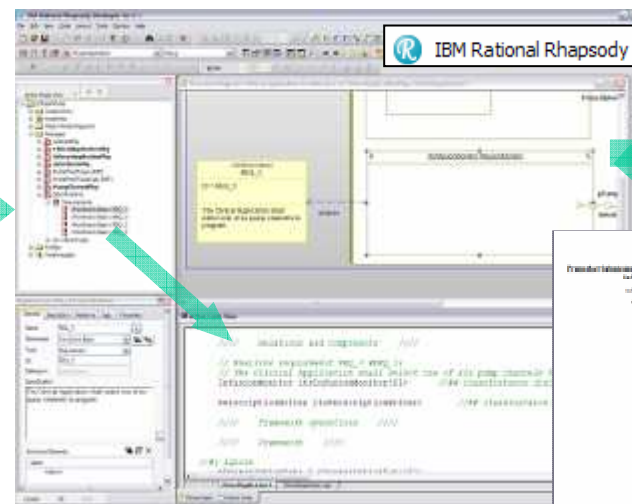

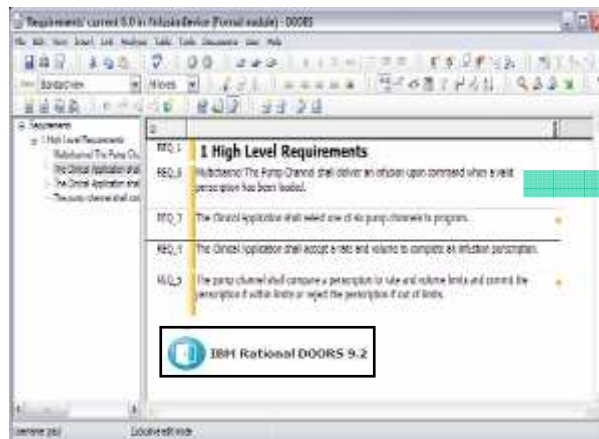

Specify Operational Capabilities, Enterprise Architectures, and Systems

- ▶ Specify operational capabilities needed for:
 - Warfighters
 - Network centric operation
- ▶ Analyze complex systems of systems
- ▶ Comply with DoDAF, MoDAF, FSAM architectural framework requirements

Manage Requirements across Lifecycle and Disciplines

- *Build the right product* because the requirements are visible at all times
 - ▶ Prove that all agency requirements (user, safety, regulatory, etc.) were fully satisfied
- Understand the requirements
 - ▶ Analyze stakeholder needs
 - ▶ Evaluate coverage and impact analysis
- Validate the requirements
 - ▶ Analyze for correctness and to determine next steps

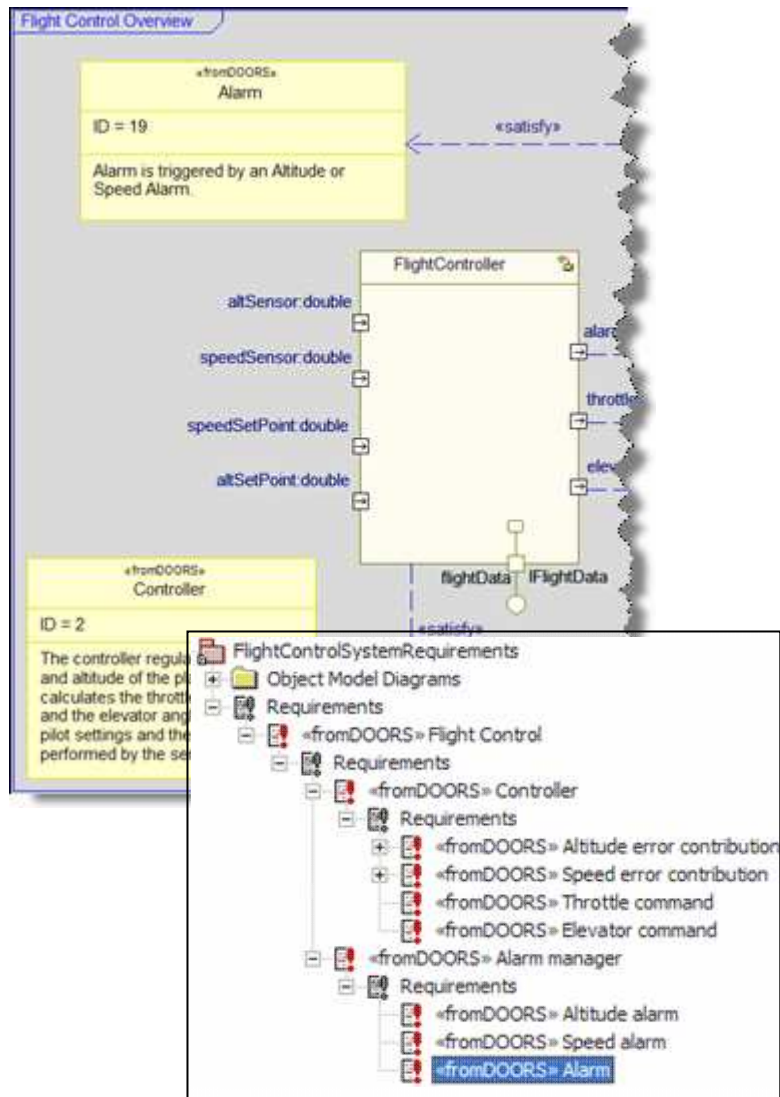

A screenshot of a document showing a table of contents or index. The table lists various sections and their corresponding page numbers. The sections include:

Section	Page
1. Introduction	1
2. System Overview	2
3. System Architecture	3
4. System Requirements	4
5. System Design	5
6. System Implementation	6
7. System Testing	7
8. System Deployment	8
9. System Maintenance	9
10. System Disposal	10

Translate Requirements into a System Design

- *Build the product right* with structural and behavioral analysis and design
- Visualize the system
 - ▶ Reduce confusion over requirements
 - ▶ Specify system functionality
 - ▶ Simulate to confirm functionality
- Analyze impact of changes
 - ▶ Whether in requirements or design
- Trace requirements in either direction
 - ▶ Provide full accountability and understanding
 - ▶ Comply with DO178B traceability
- Specify and develop software
 - ▶ Monitor and control the system

Build in Quality from Concept to Launch

- Simulate often to validate functionality and verify correctness
- Automatically create and execute tests from the design model or target platform
- Manage test cases, while prioritizing the features and functions to be tested

The screenshot displays the Rational Quality Manager interface. The main window shows the 'Execution Result' for a test case named 'SD_tc_0'. The test case is marked as 'Passed' and was executed on 10/20/11, Monday, April 27, 2009. The test case details include the host name 'jey@slava', owner 'Mary, Test Manager', and test case ID 'SD_tc_0'. The test data is 'Unassigned' with a weight of 100.

Below the test case details, there is a 'Summary' table:

Summary title	Summary passed
Total number of SDs used:	1
Total number of SD instances in test:	1
Total number of executed SD instances:	1
Total number of PASSED SD instances:	1 (100%)
Total number of FAILED SD instances:	0 (0%)
Total number of ACTIVE SD instances:	0 (0%)
Total number of NOT ACTIVE SD instances:	0 (0%)

On the right side of the screenshot, a sequence diagram is shown with participants: Pilot, iThreatControl, ADMS, iRadarTrack, and Intercept. The diagram illustrates the following steps:

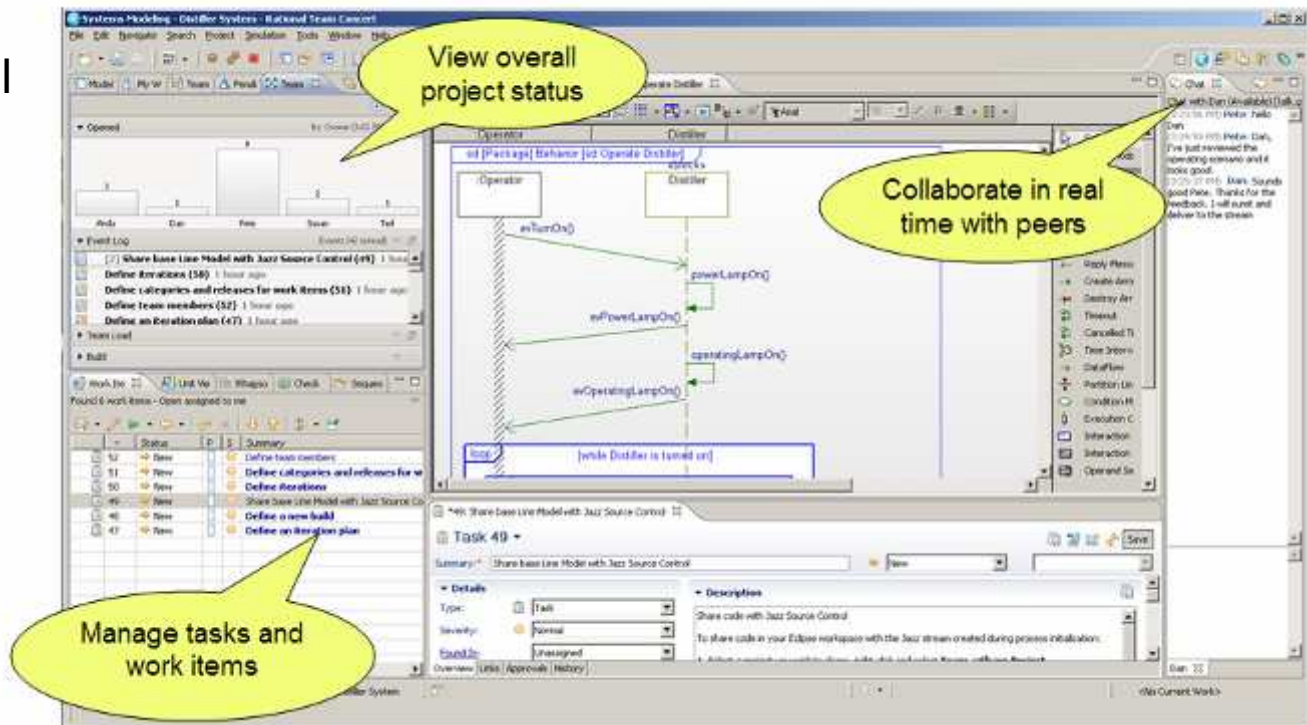

1. Enable Target Scanning (Pilot to iThreatControl)
2. Target Parameter Message (iThreatControl to ADMS)
3. Is Target in DB (ADMS to iRadarTrack)
4. Add Target as foe via visual ID (iRadarTrack to Intercept)
5. Add target to DB (Intercept to ADMS)

Preconditions are noted as: 'the plane is in flight and Target acquisition via Radar parameters has been activated'. A note indicates 'Target is Not in the Database, Add? (optional)'.

Collaborate and Communicate throughout Development

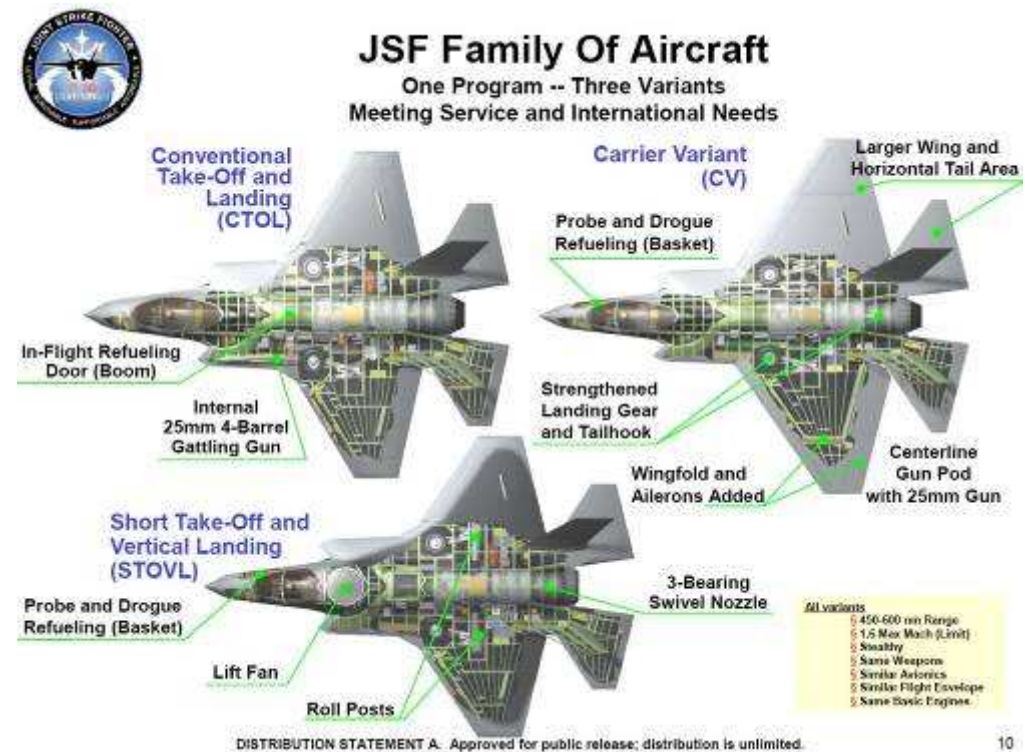

- Collaborate across teams and geographies
 - ▶ Reduce time and risk associated with parallel development
 - ▶ Enable integrated design, sharing and review across diverse engineering teams
- Enhance productivity
 - ▶ Share views
 - ▶ Collaboratively debug
 - ▶ Link work items
- Automatically generate reports and documentation directly from the design

Recapture Intellectual Property

- Preserve and reuse designs and design data
 - ▶ Visualize and reverse-engineering existing software
 - ▶ Create a library of design assets
 - ▶ Analyze to best meet requirements

- Work with product lines
 - ▶ Expand product offerings
 - ▶ Exploit commonality across products
 - ▶ Focus efforts on unique product variants

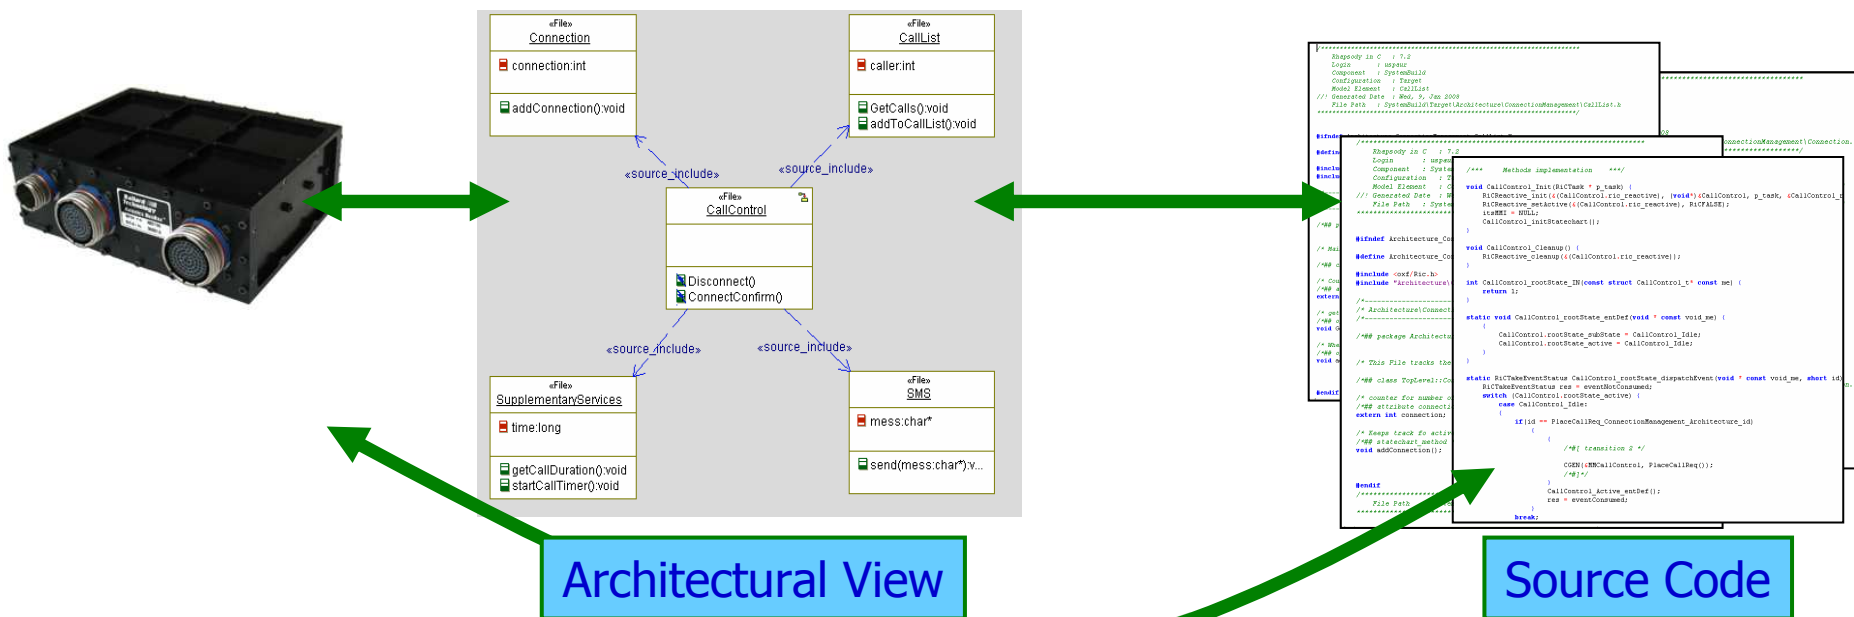

10

Control the System with Optimized Software

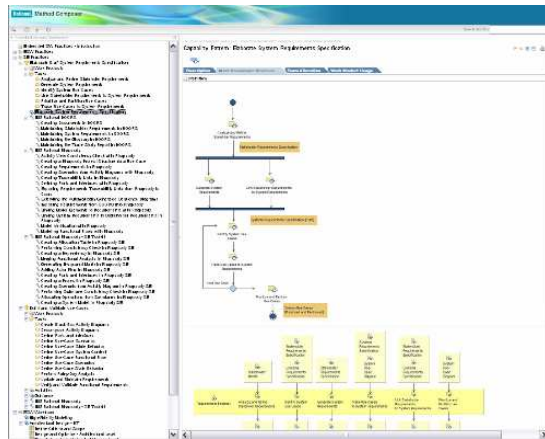

- Design efficient embedded source code
 - ▶ Specify and create from the system requirements
 - ▶ Generate complete C, C++, Java, and Ada applications
- Unite the architecture and code
 - ▶ Simultaneously work with the system design, software and target platform
 - ▶ View how a change in any one area is reflected in the others

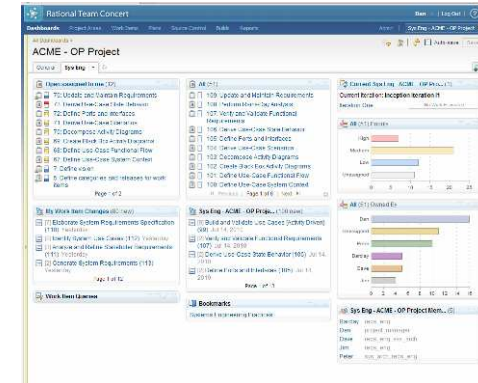

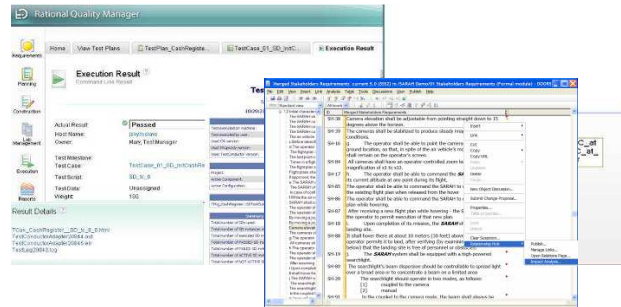

Technology, Tools, Best Practices, Services

Practice library

Dashboards

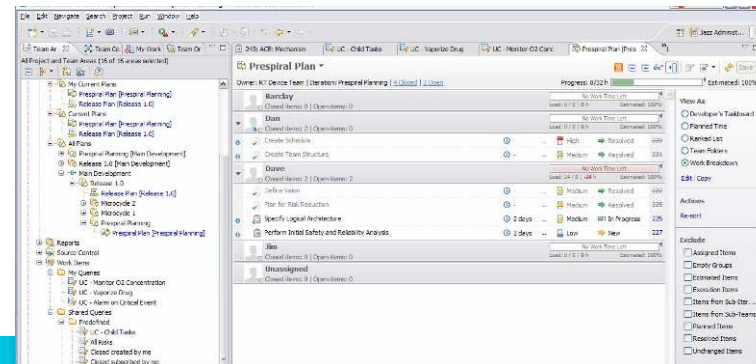

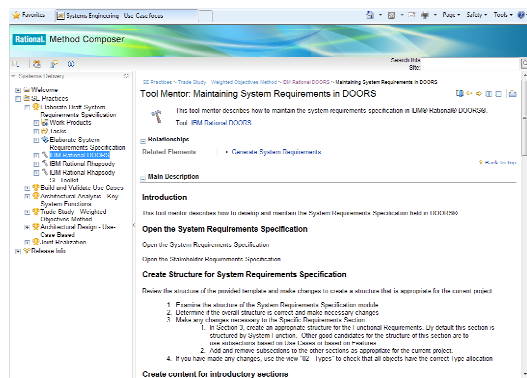

Starting templates

Tool mentors

Auto generation of practice work items

Collaborative Design Management

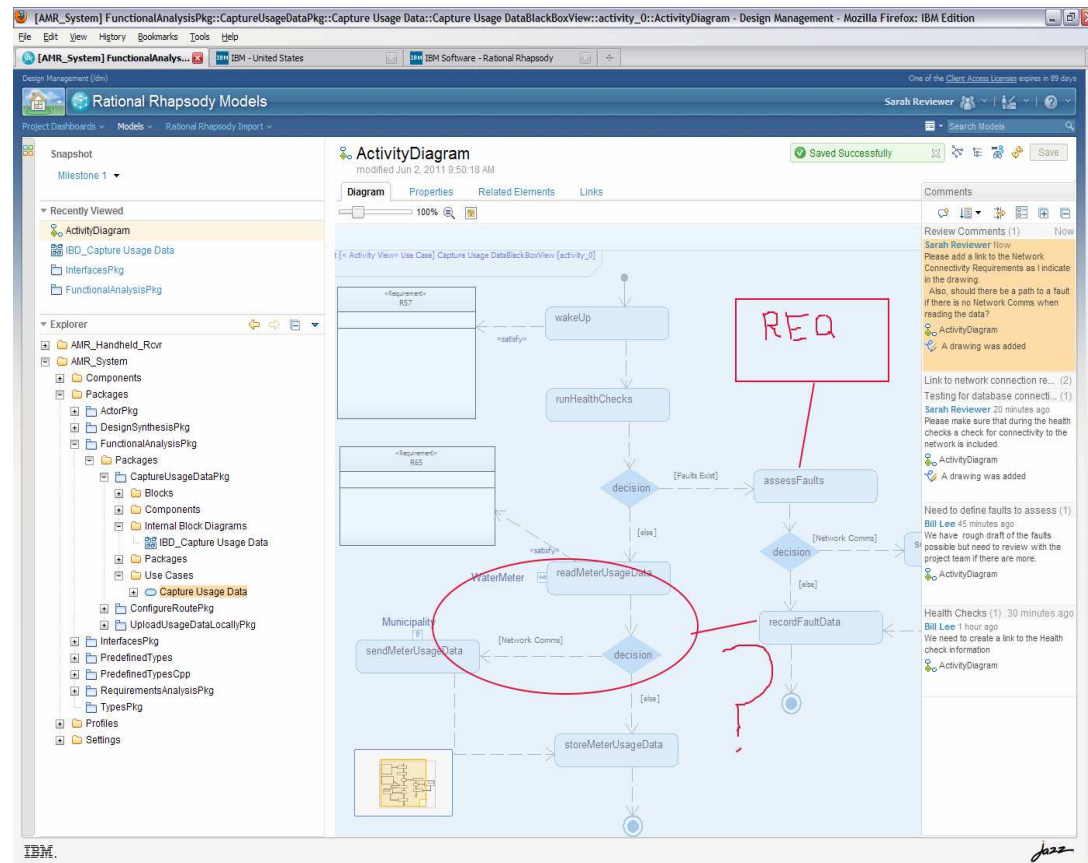

Enhance cross-team collaboration in systems & software design

Central Design Hub

- Enterprise-wide search, review, analyze, and reuse
- Links elements to artifacts
- Navigate and visualize relationships

Stakeholder Collaboration

- Mark-up diagrams
- Discussion thread
- Web client

New Release in June 2011

Agenda ●

The Systems Engineering Challenge – Rational Perspective

Engineering Lifecycle Management needs

Tool integration patterns for Engineering

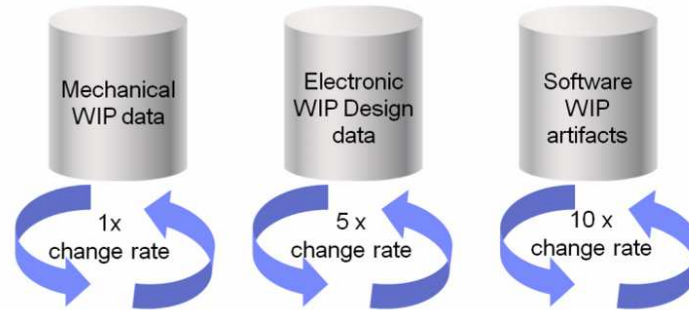

Summary

Challenges in Complex Products Development

Collaboration between domains is still manual.

- ✓ Related and dependent data
- ✓ Progress on related tasks (process visibility)
- ✓ Progress related to the overall program plan
- ✓ Visibility to changes in related system elements

Many Different Roles

Req'ts Engineer

Hardware Engineer

Mechanical Engineer

Software Engineer

Field Maintenance

Best of Breed Applications, Domain Specific Processes

Domain Specific Program Assets

Program Master Plan

Business results of increased product complexity driving critical imperatives for product development and delivery

Business View

Product missed customer needs	46%
Late to market/missed demand	33%
Poor commercialization / promotion	26%
Product quality	24%
Pricing	23%
No clear product differentiation	19%

The CIO's Guide to the PERFECT Launch: Translating Innovation to Business Benefit, AMR Research, 2005

Engineering Opportunity

Improve communication and collaboration across disciplines	71%
Increase visibility into status of requirements	49%
Increase ability to predict system behavior prior to testing	46%
Implement or alter new product development processes for a multi-disciplinary approach	43%
Increase real time visibility of product Bill of Materials (BOM) throughout the development process	39%

Aberdeen Group, System Design: New Product Development for Mechatronics, Michelle Boucher, David Houlihan, January, 2008

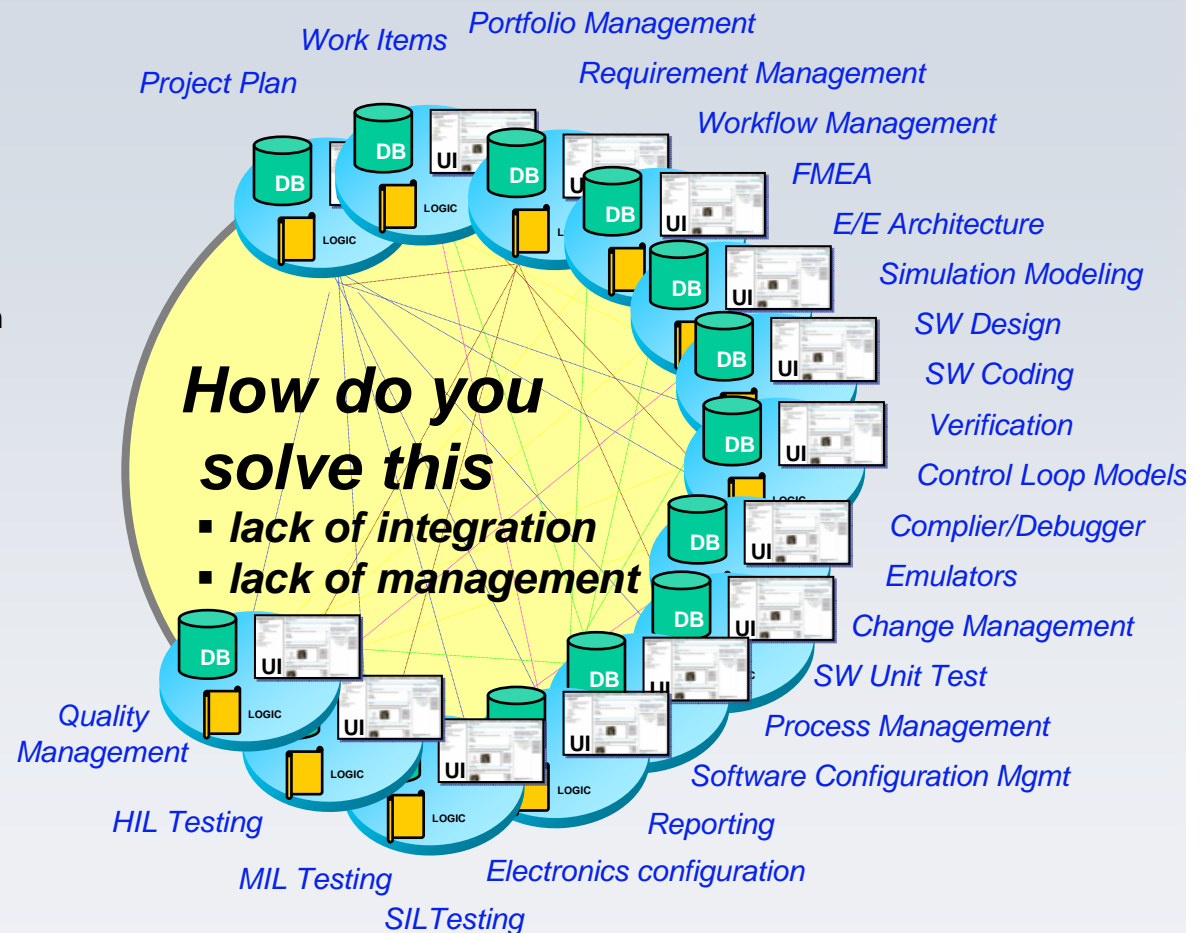

Engineering environments are highly fragmented - *the challenge to connect them is increasing exponentially*

- Traditionally, each tool came with its own

- ▶ **UI** - Web and desktop presentations of views and tasks
- ▶ **Logic** – Workflow, process, search, query, scale, security and collaboration
- ▶ **Storage** – individual files on workstation or servers: how to ensure availability and traceability?

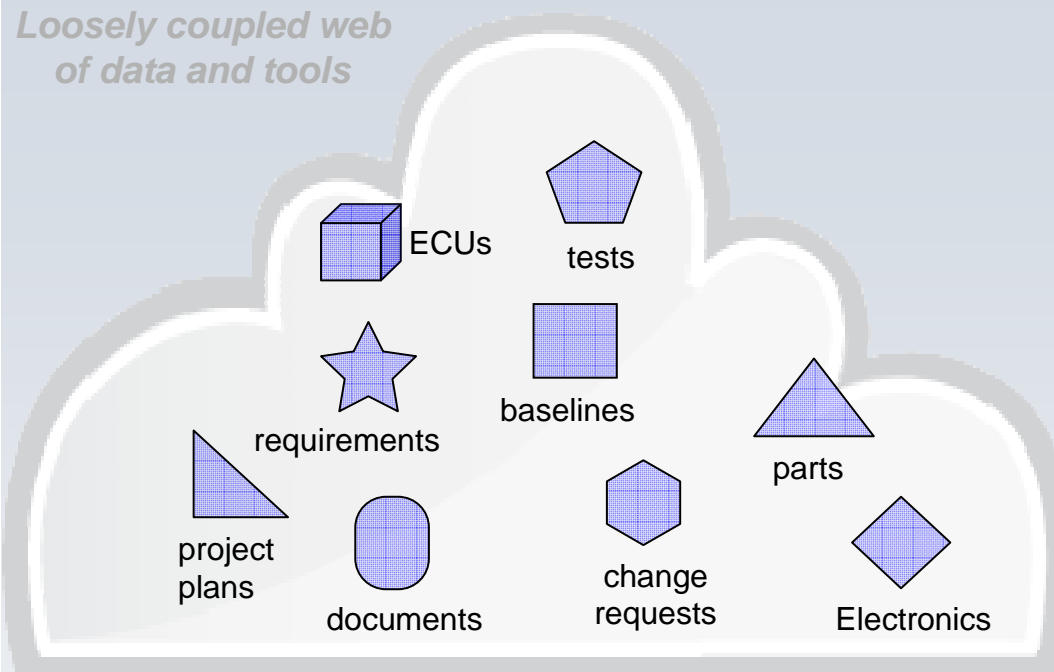

- Resulting in...

- ▶ Brittle/poor integrations
- ▶ Silos everywhere
- ▶ High cost to maintain and administer
- ▶ Low re-use

Jazz Integration Architecture enables a loosely coupled “web” of engineering data

Loosely coupled web of data and tools

Federated integration architecture

Provides common, cross-product capabilities (search, query, report, process, etc.)

Integrate tools multi-vendor and in-house tools

No duplication/synchronization of data

Incrementally add tools and capabilities

Leverage existing tool investments and best of breed capabilities

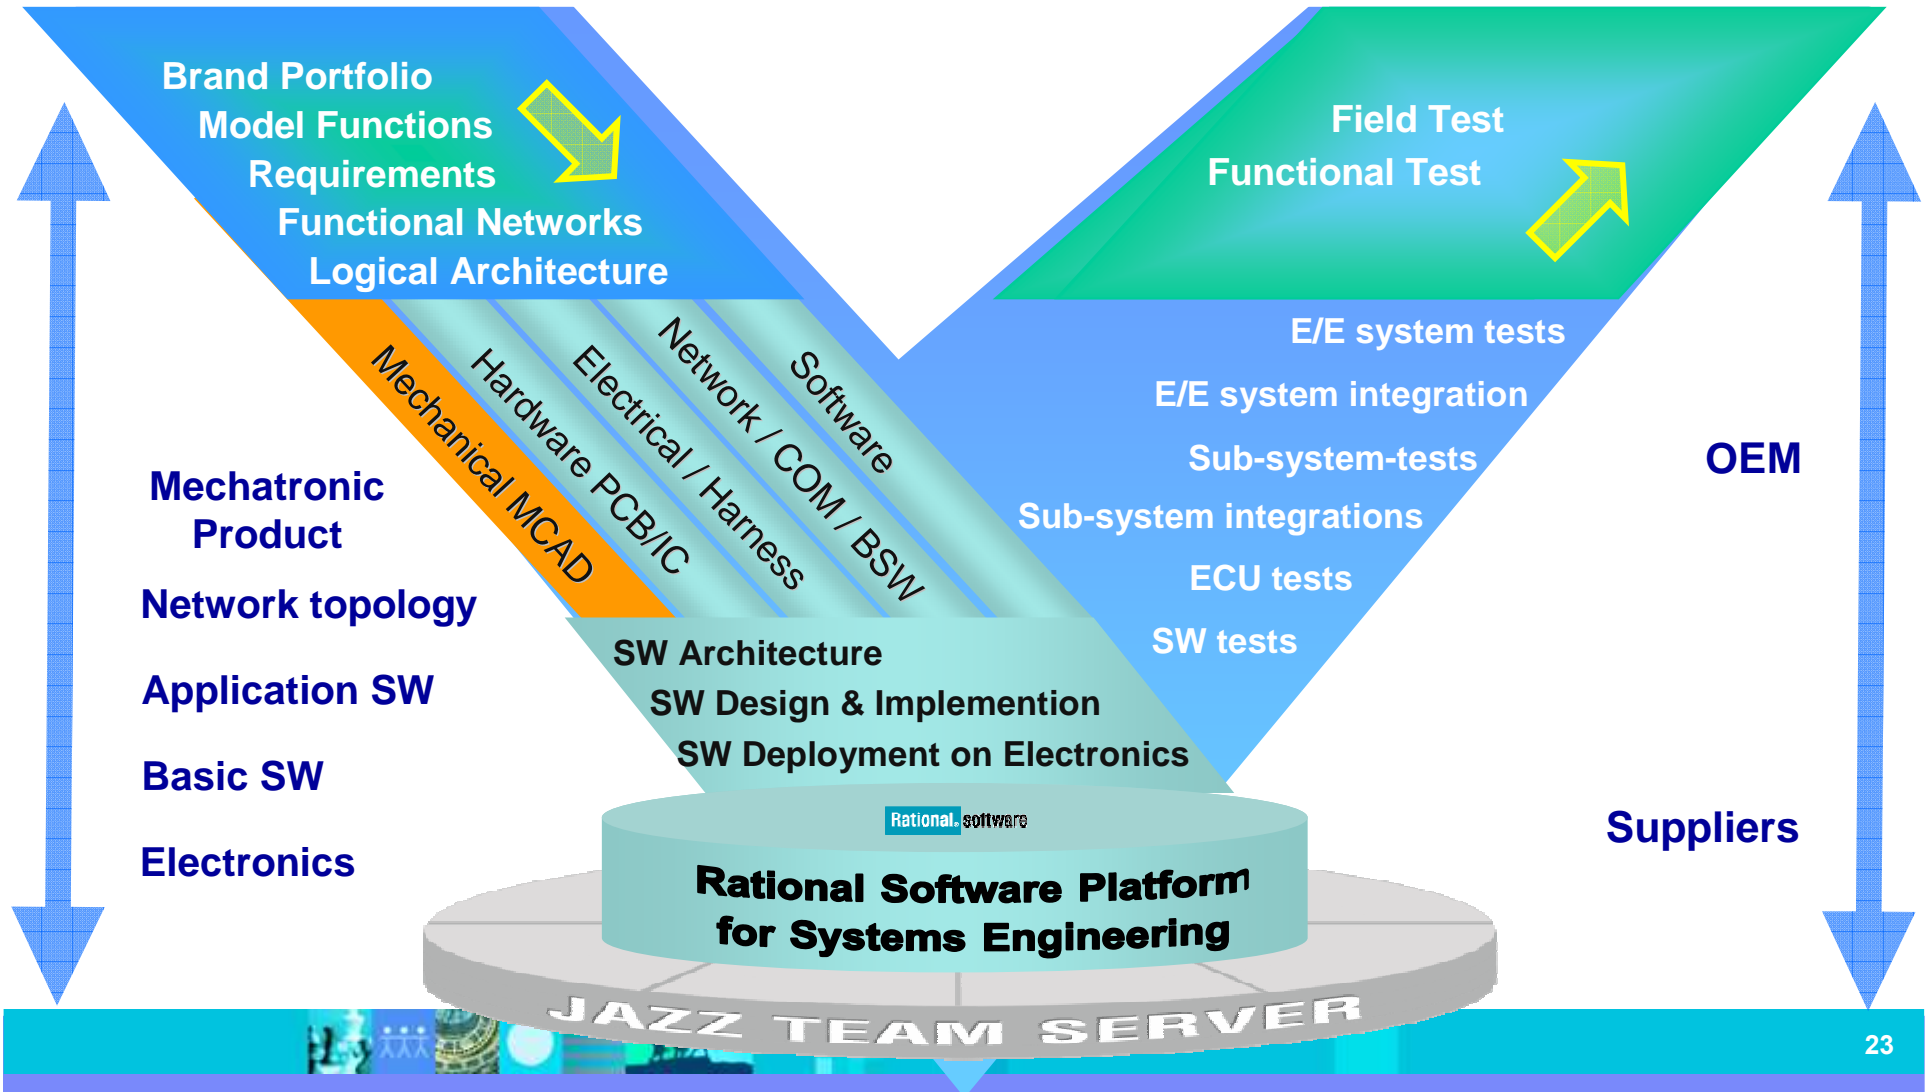

Upgrade parts individually

Integrating Engineering Disciplines with IBM Rational Platform

integrates teams, disciplines and workflows along the V-Model

→ Service After Sales
→ Manufacturing

Goals

- Practical
 - ▶ Improve user experience of team members trying to discover, understand and reuse engineering artifacts
 - ▶ Bridge semantic gap between domain and tool terminology
 - ▶ Improve collaboration and communication across disciplines
 - ▶ Reduce redundant information entry/copying
 - ▶ Reduce integration cost and complexity
 - ▶ Improve and automate processes (find the “gaps”)

- Aspirational
 - ▶ Advance key architectural tool integration patterns
 - Configuration management and versioning
 - Product line engineering and variability
 - Multi-model integration
 - ▶ Foundation for analytics and discovery
 - Watson for engineering?

Agenda ●

The Systems Engineering Challenge – Rational Perspective

Engineering Lifecycle Management needs

Tool integration patterns for Engineering

Summary

Each tool domain has its own organizational structure

How do I find out who is dependent on this interface?

Which artifacts are used in Product X?

Who is working on the product use case 'foo'?

each tool domain organizes artifacts in a different way

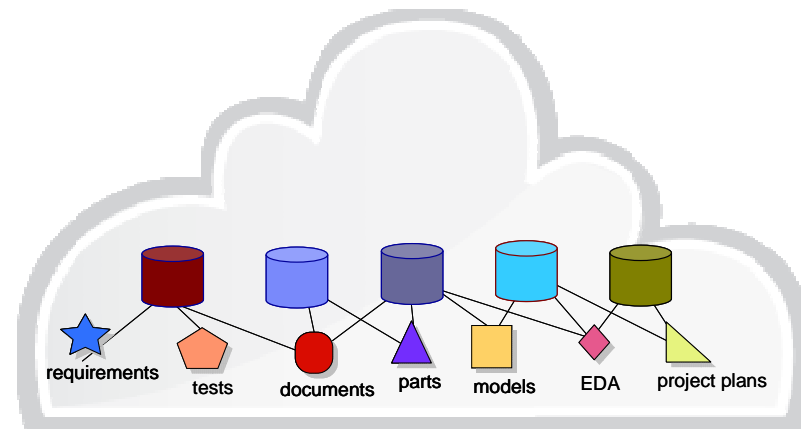

each discipline may structure projects and artifacts in their particular approach

No shared view of project/product configuration
No single point of access or integrated view/perspective

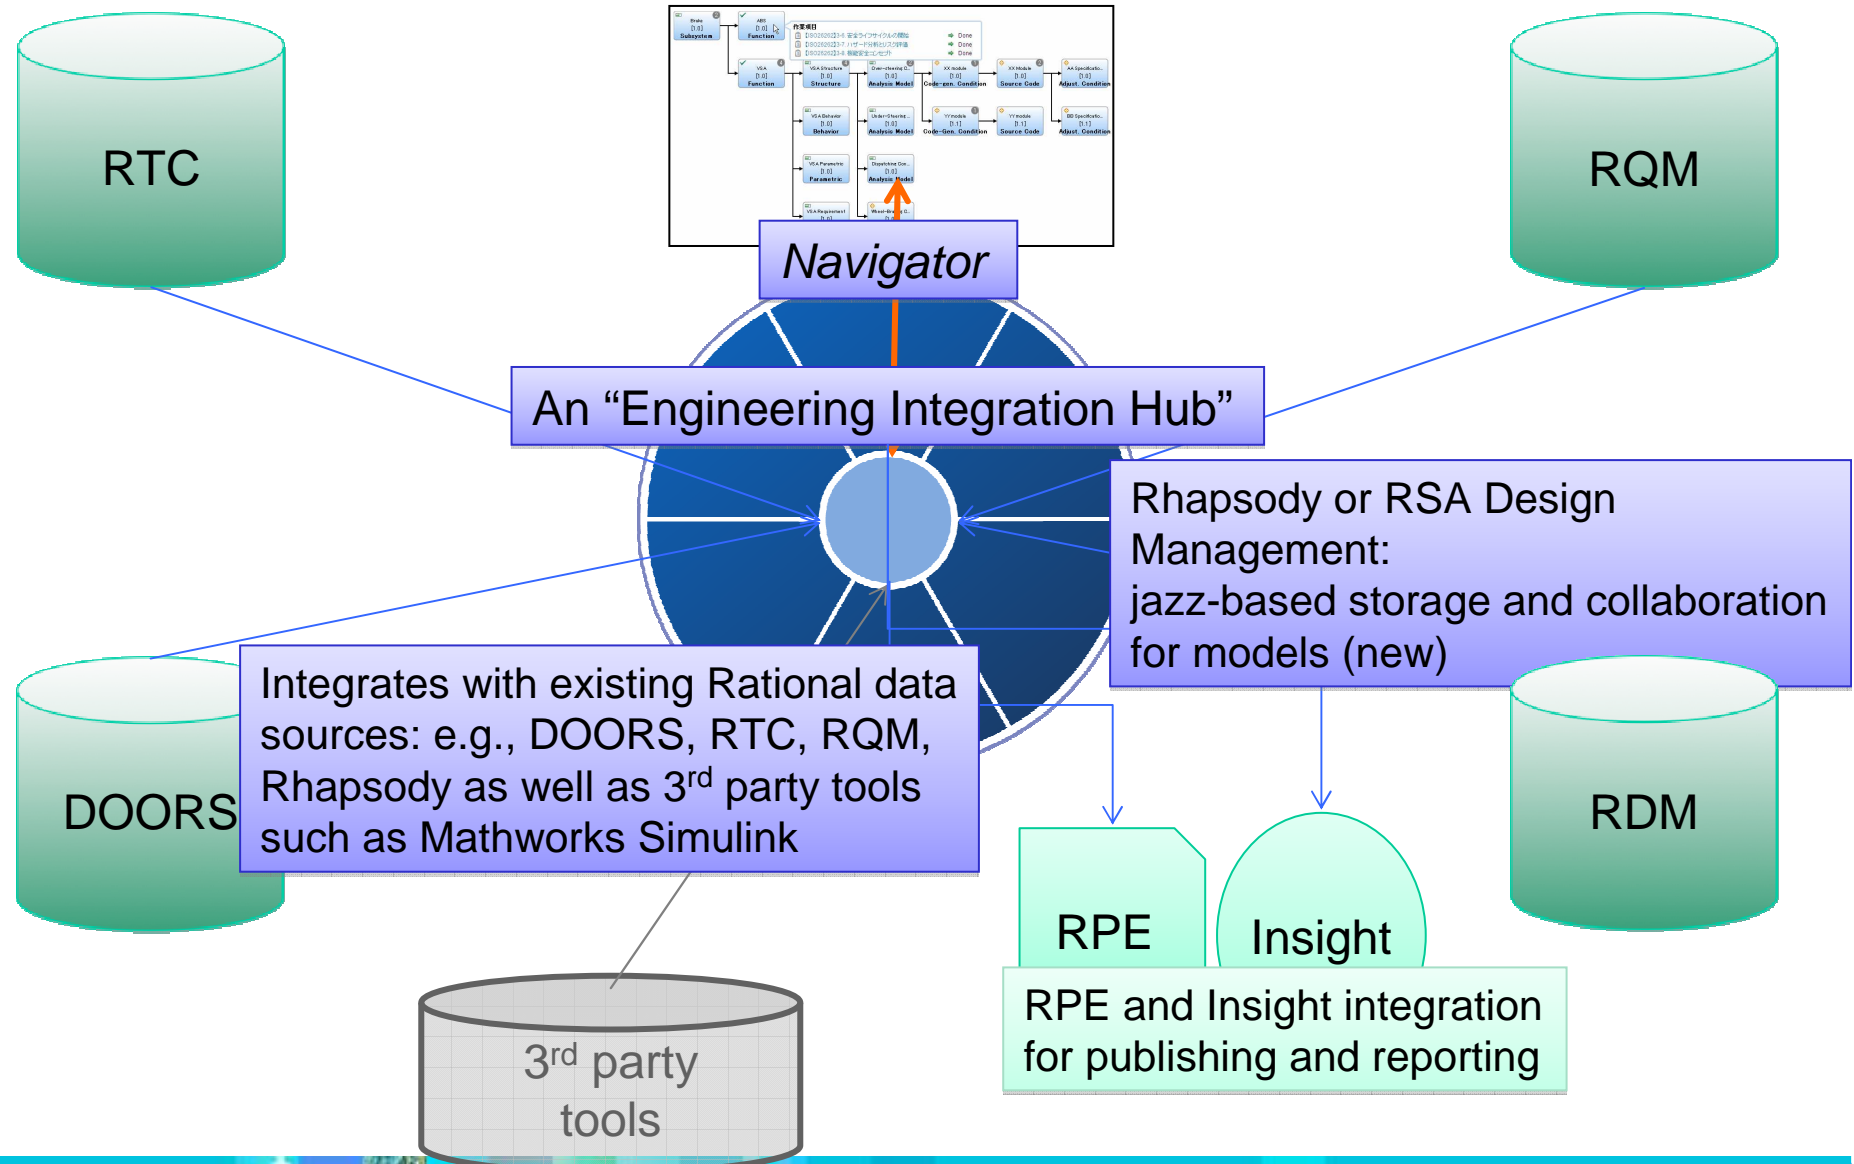

Integration Architecture Challenges

- Challenges for a federated integration architecture
 - Integrated views of data without data copying or export
 - Distributed configurations and baselines
 - Rich model integration
 - Reporting and document publishing
 - Security
 - Performance

Proposed Rational Engineering Lifecycle Management solution

Rational solution for Collaborative Engineering Lifecycle Management

Capability to support effective teams – enhanced by central index and product “context” visibility

- ▶ Real time planning
- ▶ *Lifecycle traceability*
- ▶ *In-Context collaboration*
- ▶ *Development intelligence*
- ▶ Continuous process improvement

Connected data and tools

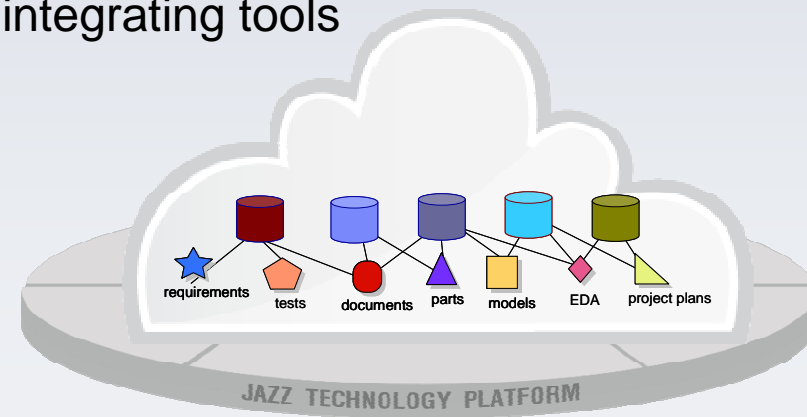

on a truly extensible, scalable and open platform

Key Directions

- ▶ Index of artifacts and relationships
- ▶ Resource navigation and query
- ▶ Cross-tool configuration management
- ▶ Cross-tool baselining
- ▶ Integrated multi-tool processes
- ▶ Open integration standards (OSLC) for integrating tools

„open community.
open interfaces.
open possibilities.“

IBM Software Group

*Turning Product Development Into
Competitive Advantage:*

IBM Rational Solutions for Systems and Software Engineering in Aerospace & Defense—DO178-B

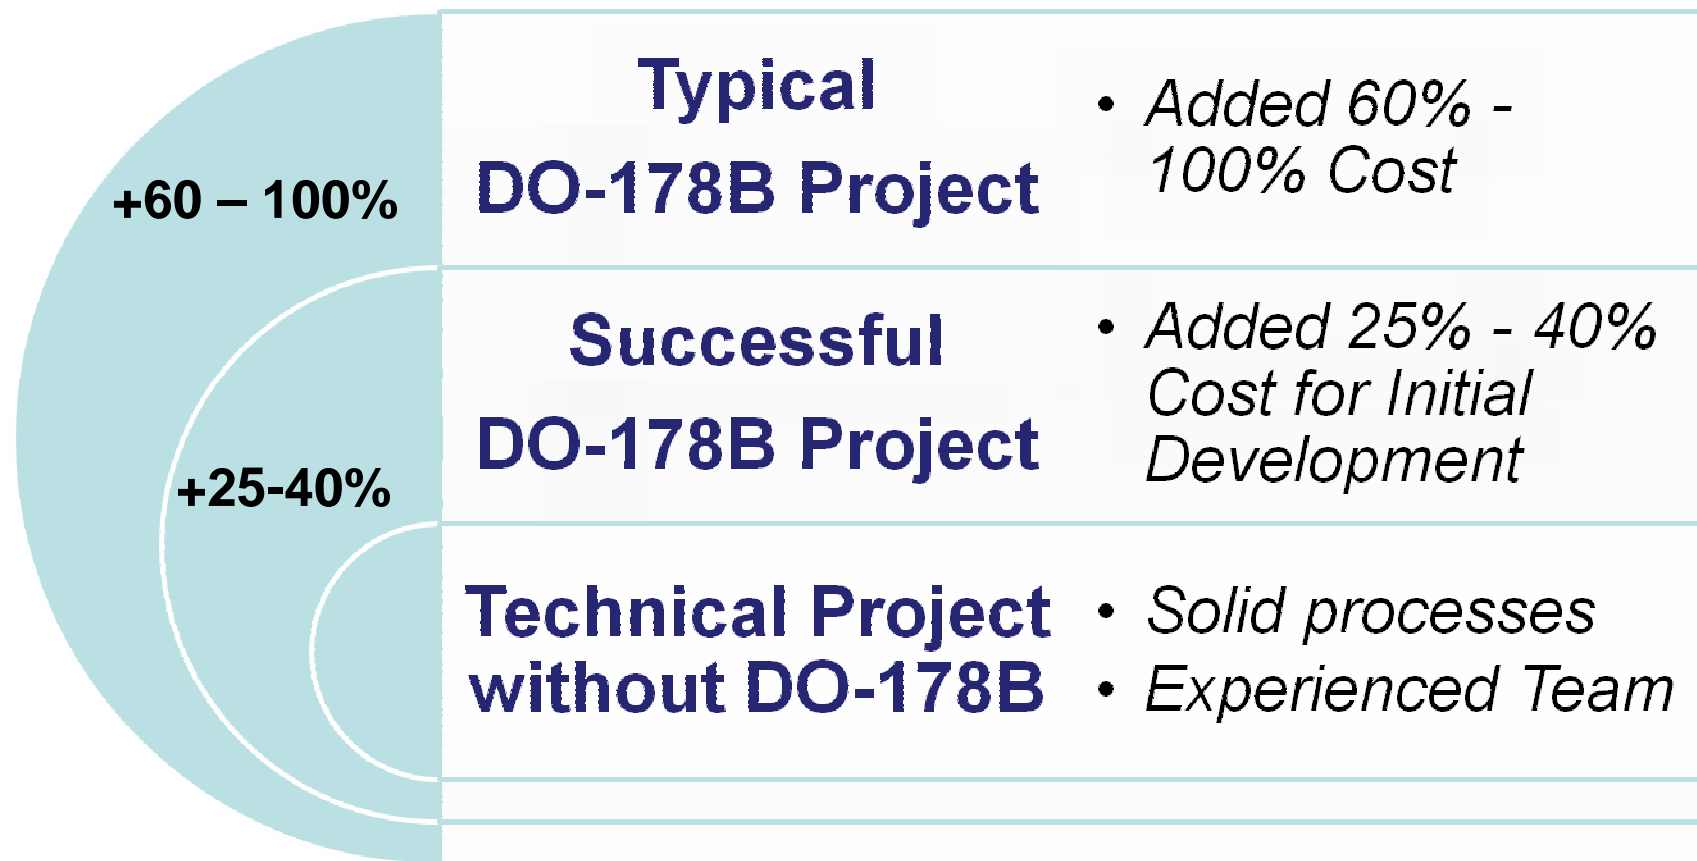

Reduce the Time, Cost and Risk of
Developing Profitable Products and Systems

Rational software

→ Go to IBM

Standards intended to prevent failures often initially increase project costs--Example: DO-178B

Source: Avionics Certification – Vance Hilderman and Tony Baghai (avionics publications)

DO-178B at 30,000 feet

- DO-178B defines detailed guidelines for development of aviation software that performs intended functions
- The Federal Aviation Authority (FAA) accepts use of DO-178B as a means of certifying software in avionics
- DO-178B outlines the *objectives* to be met, the work activities to be performed for each objective, and the *evidence* (output documents) to be supplied for each objective (based on criticality level A-E)
- Objectives are organized into process areas
 - ▶ Planning
 - ▶ Development
 - ▶ Verification
 - ▶ Configuration Management
 - ▶ Quality Assurance

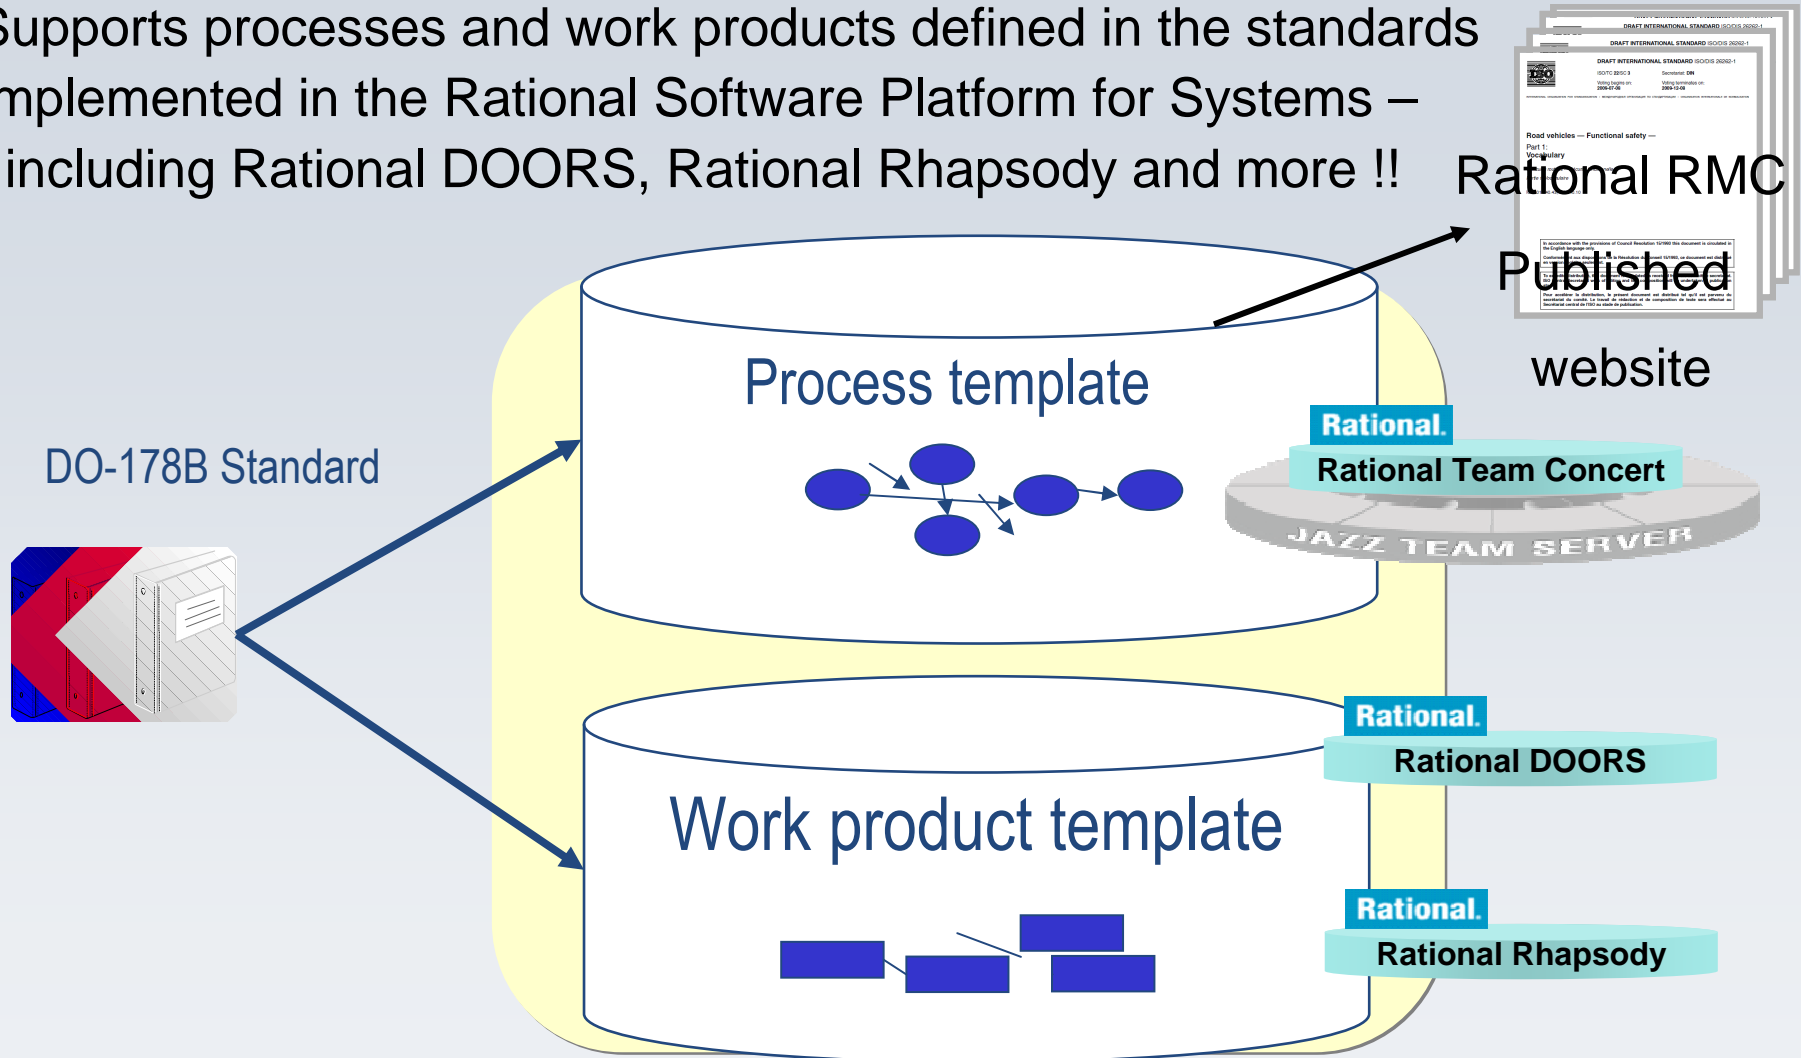

Overview of IBM Rational Solutions for DO-178B

A look to the inside: Overview of IBM practices for DO-178B

- Supports processes and work products defined in the standards
- Implemented in the Rational Software Platform for Systems – including Rational DOORS, Rational Rhapsody and more !!

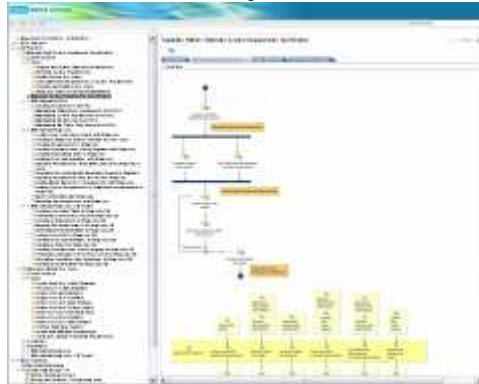

IBM Rational Solutions for DO178-B provide process support

Learn and check how to use a Practice

A Practice library & tool mentors

- Rhapsody

IBM Rational Solutions for DO178-B

Practice library and published web-site

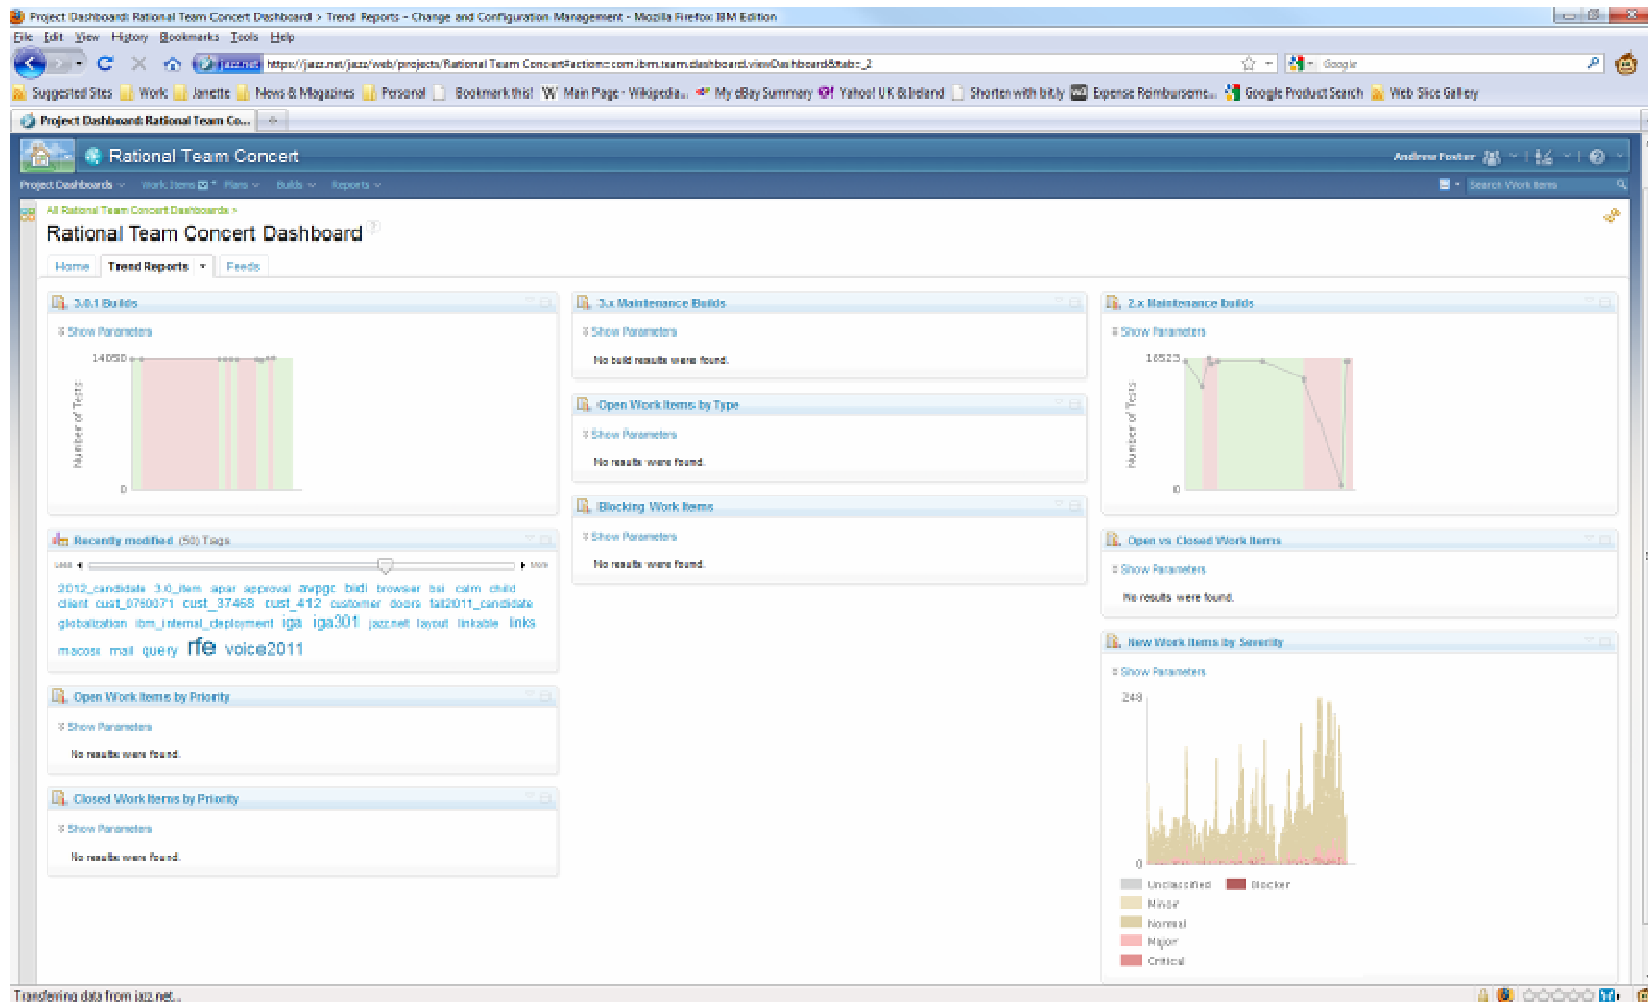

The screenshot displays the Rational Method Composer interface. The left pane shows a tree view of the 'SE Practices' library, including sections like 'SE Practices - Introduction', 'SE Overview', and 'SE Workflows'. The main content area shows the 'SE Practices - Introduction' page, which includes a 'Main Description' and an 'Introduction' section. Below the text is a diagram titled 'Systems Engineering Practices' showing a process flow: Requirements Analysis, System Functional Analysis, Design Synthesis, SW Analysis & Design, SW Implementation & Unit Test, Module Integration & Test, (Sub-System) Integration & Test, System Verification Plan, System Validation Plan, and System Acceptance. A 'Systems Engineering Practices' box is highlighted in red. Below the diagram is a table with columns for 'Discipline' and 'Phase' (Initiate, Elaborate, Construct, Transition).

- A step by step guide to the Systems & Software Engineering Practices, formed from the well proven IBM experience with Harmony and the application of Rational Unified Process to Systems

- Delivered as RMC and published web-site content

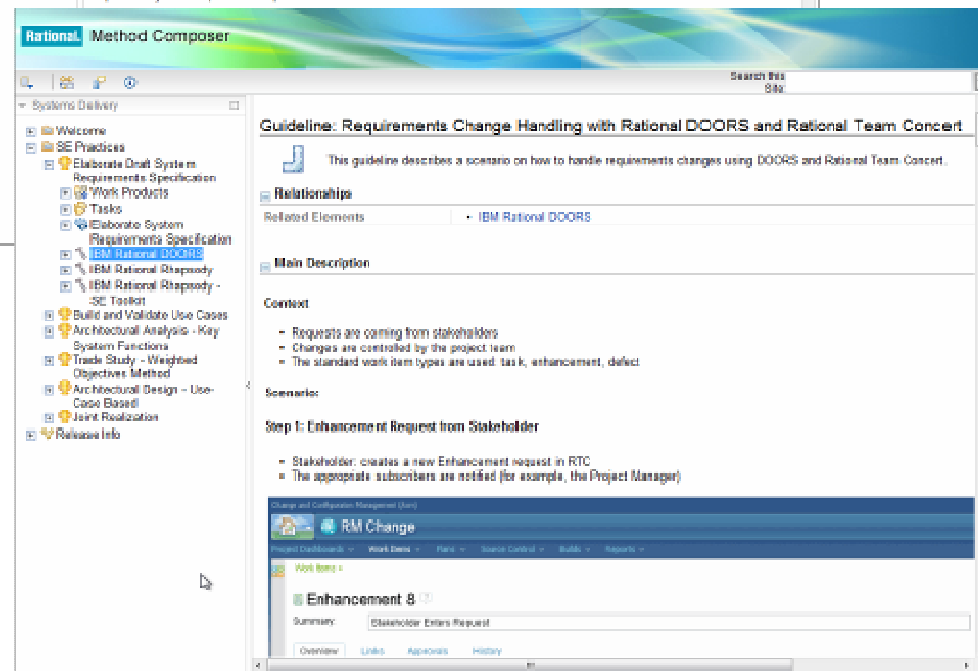

Role and team dashboards

- Rational Team Concert dashboards provide summaries of the state of an individual or team activities, such as the application of one of the Practices.

Practice Tool mentors and Practice guidelines

- A hands on view of the Practice steps are illustrated in a core set of IBM Rational tools,
 - ▶ DOORS and Rhapsody
- Describes “How to” in the tool
 - ▶ E.g. build a specific deliverable
- Additional specific guidance provided for RTC in the context of Requirements Change Handling with DOORS

DO – 178B practices

IBM provides process support for safety critical development

DO-178B

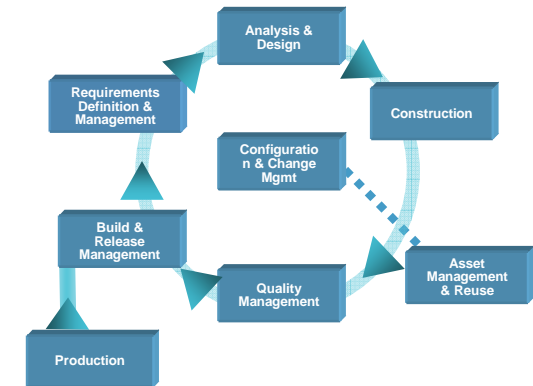

A set of industry practices and process/work item templates to help organizations developing products for certification under DO-178B. Covers the 5 main processes concerning Planning, Development, Verification, Configuration Management and Quality Assurance

The screenshot shows the Rational Method Composer interface. The main content area displays the 'Welcome to the DO178 Accelerator' page. The page includes a navigation menu on the left with items like 'Getting Started', 'Delivery Processes', 'DO-178B Objectives', 'DO-178B SW Certification Levels', 'Practices', 'Roles Sets', 'Tasks', 'Work Products', and 'Release Info'. The main content area has a 'Main Description' section and a 'Navigation Links' section with icons for Roles, Work Products, Tasks, Processes, and Practices. The 'Main Description' section contains text about the DO-178B mapping and project plans. The 'Navigation Links' section lists 'Tasks' as a process asset provided within the library.

Extend the Solution to Meet Your Needs

The Rational solution can be tailored to meet virtually any systems development workflow :

- ▶ *Automated reporting and documentation* with **Rational Publishing Engine**
- ▶ *Embedded software testing* with **Rational Test RealTime**
- ▶ *Team-based configuration management* with **Rational ClearCase** or **Synergy**
- ▶ *Domain specialization with defense architecture frameworks*
- ▶ *Embedded platform development* with **Wind River Workbench/VxWorks**
 - Support also exists for **Green Hills Integrity, QNX Momentics/Neutrino** and many other embedded platform operating system environments
- ▶ and many others...

Ensure Success with Rational

Rational software

Process and methodology

- Process framework workshops
- *Rational Harmony* family of Best Practices and Processes
- Process training

Implementation services

- **Adoption quick starts**
- **Deployment support**
- **Project architecture workshops**
- **Project management**
- **Planning support**
- **Escalation/risk mitigation**

Training and mentoring

- Product familiarity
- Product expertise and specialization
- Technology transfer
- Adoption mentoring
- e-Learning

Technical services

- **Measured Capability Improvement Framework (MCIF)**
- **Product optimization and customization**
- **Tool configuration**

Summary

- Complexity can rapidly increase as you develop products and systems
- Maintaining the various systems relationships manually is very difficult – maybe impossible
- IBM's *solution for Systems and Software Engineering* automates the building of structures and dependency relationships to:
 - ▶ Manage increasing complexity
 - ▶ Ensure designs and products meet market demands and industry requirements
 - ▶ Perform effective impact and change analysis across different disciplines and subsystem views
 - ▶ Enable collaboration across the entire development organization

Rational Solution for Systems & Software Engineering

Best Practices, Tools and Services on an open platform

 *Open Services for Lifecycle Collaboration*

Accelerating Development for A&D and Automotive

Supporting industry-specific methodology

- Extends base Solution with industry-specific A&D and Automotive content
- Accelerates process and practice guidance

▪ A&D

- Support for defense architecture frameworks (e.g., DoDAF, MoDAF)
- Support for **DO-178B** standard: the international and de facto standard for certifying all aviation safety-critical software.

▪ Automotive

- Support for AUTOSAR, an industry standard for ECU development
- Support for **ISO 26262**, an upcoming new automotive functional safety standard for in-vehicle electric and electronic (E/E) systems

Accelerating Development for Electronics

Supporting industry-specific methodology

- **Extends the Solution with support for HW/SW Co-design.**
 - ▶ Provides process, practice guidance and tooling that support developing hardware and software better in synch
 - ▶ Lifecycle approach with multiple entry points
 - ▶ Integrations with key EDA companies like Cadence and MentorGraphics

Jazz: An open platform approach “Jazz Dashboard”

OSLC: Simplifying lifecycle integration

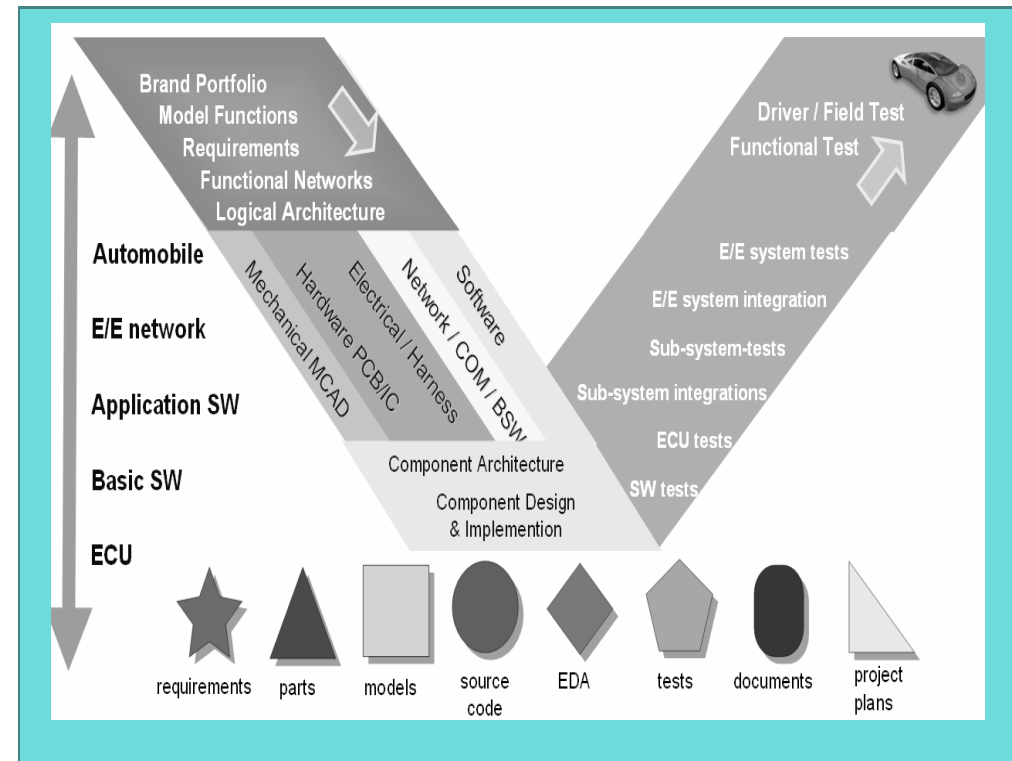

**Open Services
for Lifecycle
Collaboration**
*Open interfaces.
Open possibilities.*

Summary: The delivery of smart products is significantly improved through systems and software engineering

- Products and services of all types are becoming increasingly ***instrumented, interconnected and intelligent***
- Best-in-class companies will benefit from **increased profitability and market share**
- The interconnection of multiple products and services into a ***“system of systems”*** delivers unique value and benefits
- The Rational Jazz platform can help companies **design, deliver and manage smarter products**

Smart Products

Symposium: Seize the Day

- Take advantage of the technical sessions
- Meet your peers, develop new relationships
- Ask us questions

Make This Your Day – Interact – Ask - Provide Feedback

Symposium 101: Seize the Day

Key Topics:

- Aerospace and Defence Roadmap
- The Rational Solution Demo
- Product Line Engineering: A General Motors Case Study
- UPDM, a UML/SysML Implementation of DoDAF/MoDAF for Military and Commercial Architectures
- NASA: Benefits of the Space Program
- Agility in Complex Systems Development
- Getting Requirements Right with Model Based Functional Analysis

Make This Your Day – Interact – Ask - Provide Feedback
