

# IBM delivers new iSeries servers

## New tools, and new services

### The road to e-business is now faster, easier and more cost-effective

Dear Customers and Partners,

IBM cordially invites you and the members of your team to a half-day seminar on the new iSeries hardware and software modernization solutions. Learn how to take advantage of modernized Web-enabled applications that can reduce costs, increase profits and facilitate corporate growth.

- Lower purchasing costs and inventory costs with integrated supply and service chains
- Lower customer service and operations costs through customer self service
- Reduce iSeries server costs with Web applications running in batch mode
- Reach new customers and suppliers via the Web

There are many technologies on the IBM roadmap to application transformation. This seminar will review:

- Eclipse, Remote System Explorer, WebFacing Tool and HATS
- Web and Web services development tools including Struts and Portal support
- Java development tools and J2EE development tools using Enterprise Java Beans (EJBs)

Web-enabling your existing iSeries 5250 applications is the first step that delivers the highest return on your investment. The seminar will demonstrate Web-enabling capabilities of the WebFacing Tool and HATS.

The iSeries server is a premier e-business server. This seminar will review the latest capabilities, enhancements, tools and bundling options that make the value proposition of e-business even more attractive.

Our seminars will introduce new cost-effective, Internet-based education and consulting to help iSeries partners and customers move their applications to the Web and realize the economic benefits of e-business.
