# The Business Driven Development Lifecycle

## IBM Rational Software Development Platform

# IBM Design & Construction Offerings

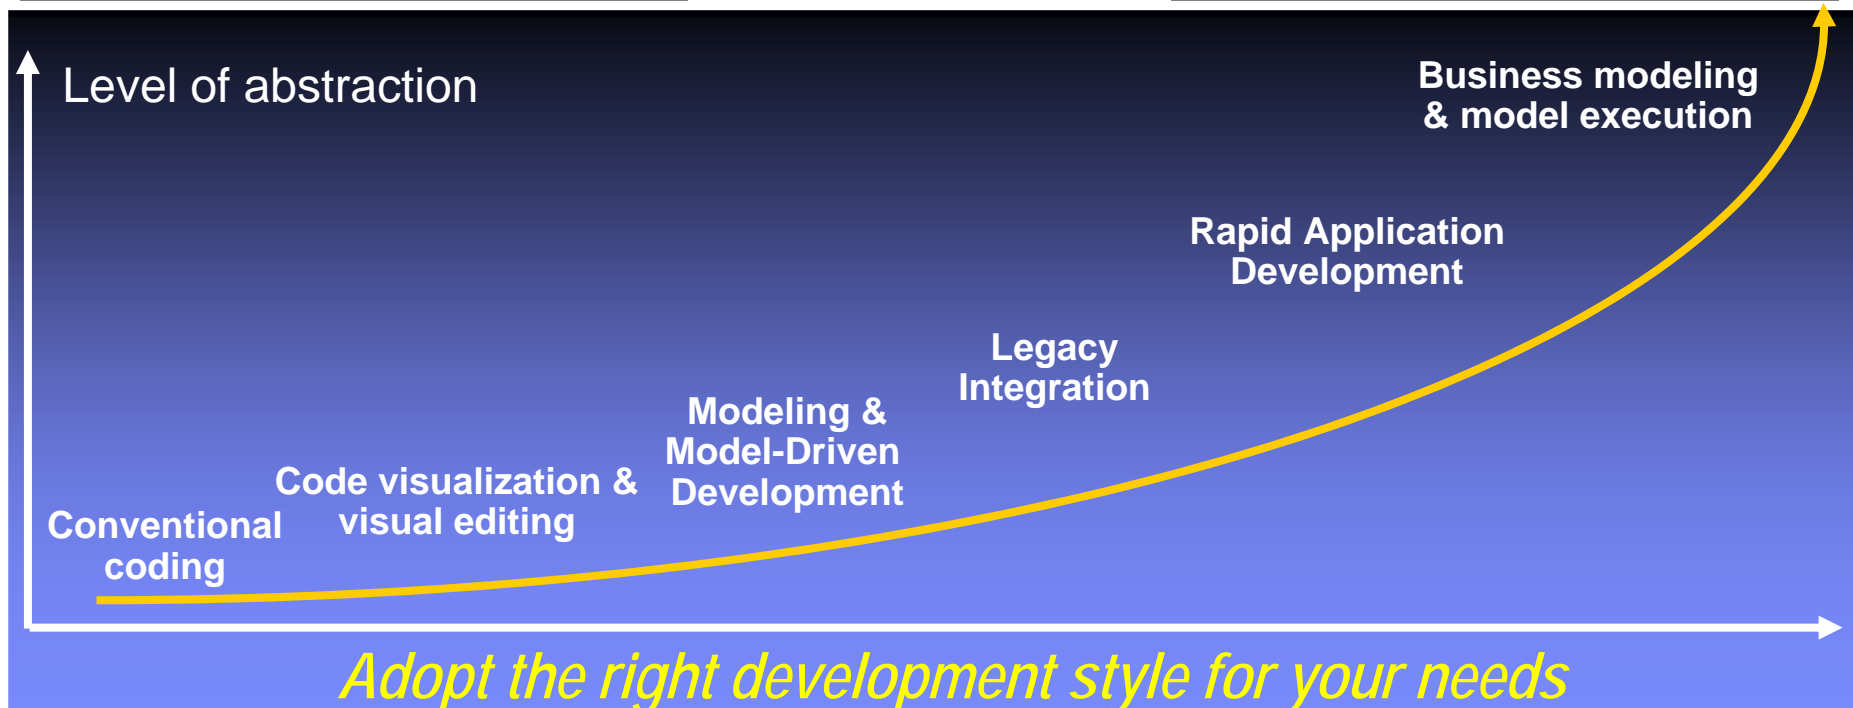

## Benefits

- Drive higher levels of productivity and time to value
- Maximize quality, robustness, reusability
- Maximize value from both code & models
- Choice of development styles

## Capabilities

- Design > Build > Test > Deploy
- Code visualization & visual editing
- Modeling & round-trip engineering
- Legacy integration
- Rapid application development
- Model execution

# Build Tools - End-2-End Design & Construction

GUIs, Pervasive Devices, Voice, etc.

## Development Roles

Application Modeling

Java/J2EE Development

Web/Portal Development

XML Web Services Development

Database App Development

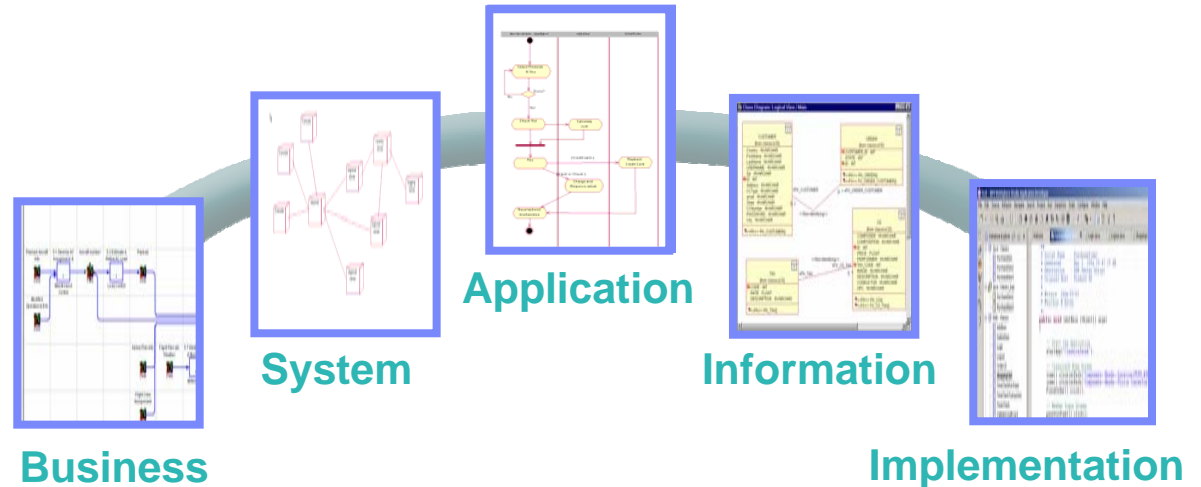

Business Process SOA Integration

Cobol, CICS/IMS, 4GL Development

# Model Driven Development With A Focus On Architecture

- ✓ Create models at various levels of abstraction
- ✓ Implement with component-oriented and service-oriented architectures
- ✓ Visualize as-built architecture
- ✓ Validate or refine & iterate

## Business Benefits

- Better align projects with business needs
- Higher-level reuse for improved productivity
- Faster, more reliable changes

## Technology Benefits

- Enables model-driven architecture and development
- Scales better than focusing only on code
- Facilitates traceability across the lifecycle

# Build Tools - End-2-End Design & Construction

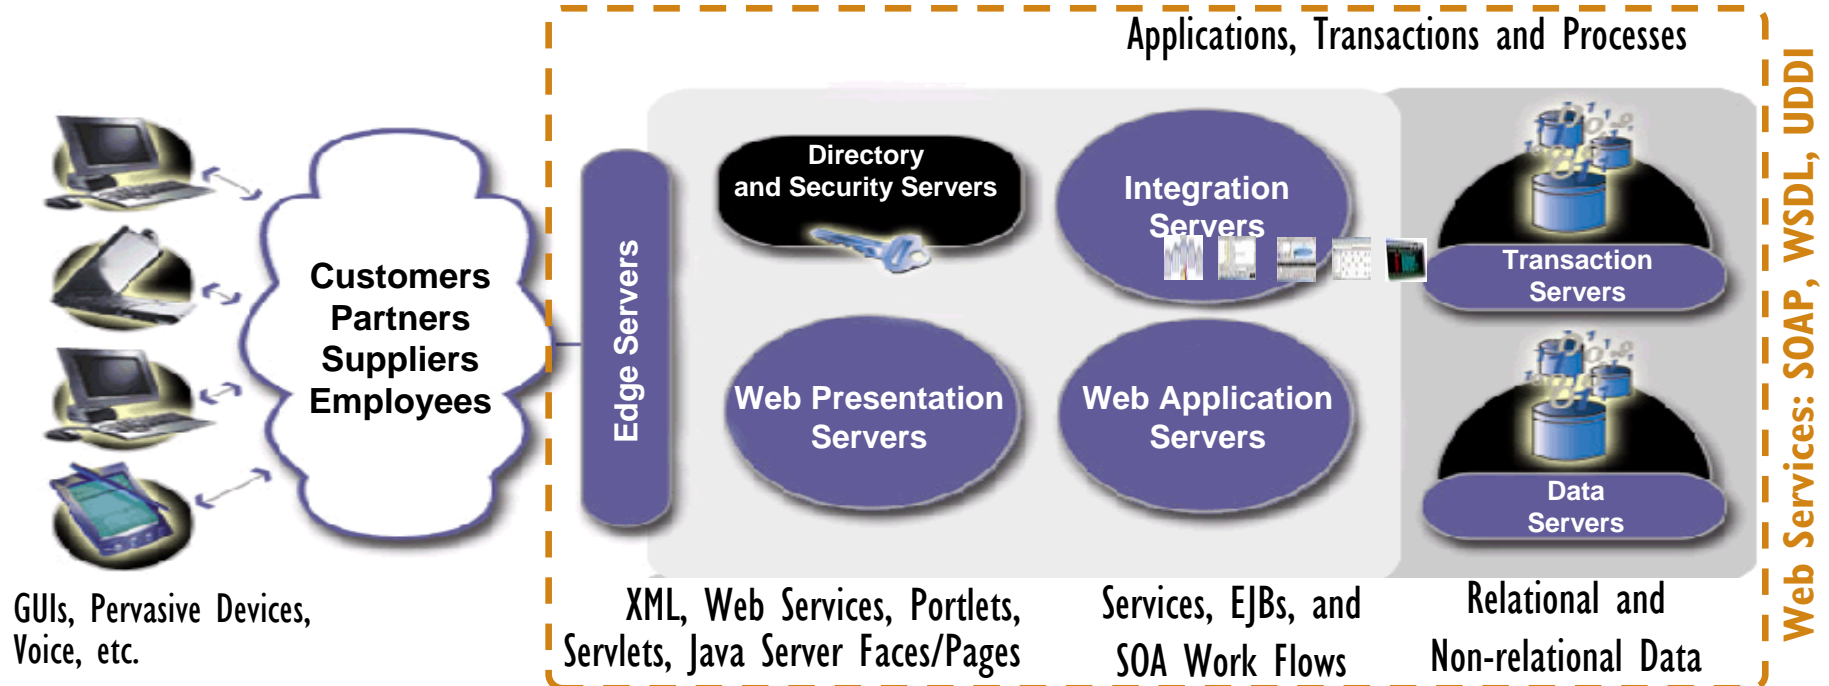

GUIs, Pervasive Devices, Voice, etc.

## Development Roles

Application Modeling	Java/J2EE Development	Web/Portal Development	XML Web Services Development	Database App Development	Business Process SOA Integration	Cobol, CICS/IMS, 4GL Development

# Build Tools - End-2-End Design & Construction

## Build Scenarios – J2EE, Web Services and Data

- Web Services – Creating, testing and consuming
- Data - Relational and non-relational data integration via Service Data Objects (SDO)
- JavaBeans and EJBs – Creating, testing and JavaServer Faces (JSF) MVC app design

The screenshot displays the IBM Test Client interface and associated development tools. The main window, titled "Test Client", shows the "Universal Test Client" with a "JNDI Explorer" on the left listing EJB Beans like "SessEJB" and "SessEJBHome". The central "Parameters" section shows a method call: `java.lang.String doSomething(String)` with a parameter "String" set to "Hello 123 !!!". An "Invoke" button is visible, and the "Results" section shows "EJB Processed: Hello 123 !!! (java.lang.String)".

To the right, a "Data" palette lists various components: Web Service, EJB Session bean, Relational Record, Relational Record List, JavaBean, SAP BAPI, SAP RFM, Siebel Record, and Siebel Record List.

Below the Test Client, a "Quick EJB" web page is shown with a form containing "SomeData: Creating and calling anc" and a "Submit" button. Below the form, the "EJB Results" section displays "EJB Processed: Creating and call".

At the bottom, a service configuration diagram shows "Services" (SessEJBService, SessEJB), "Bindings" (SessEJBSoapBinding, wsdlsoap:binding, doSomething, wsdlsoap:operation), "Port Types" (SessEJB), and "Messages" (doSoi, doSoi). Arrows indicate the relationships between these components.

On the far right, a "Palette" lists various UI components for development, including HTML Tags, JSP Tags, Crystal Reports Fac..., Faces Components, Data Table, Panel - Group Box, Panels - Tabbed, Panel - Menu Bar, Command - Button, Command - Hyperlink, Link, Input, Input - Text Area, Rich Text Area, Input - Password, Check Box, Check Box Group, Page Template, Web Site Navigation, Data, Web Service, EJB Session bean, Relational Record, Relational Record List, JavaBean, SAP BAPI, SAP RFM, Siebel Record, and Siebel Record List.

## Build Scenarios – Banking & Finance (Applying End-2-End Development)

## Build Scenarios – Banking & Finance (Applying End-2-End Development)

- **Account Management**
  - Transfer Funds, Web Services, Service Data Objects (SDO), JavaServer Faces (JSF)
- **Accounts Summary**
  - SDO custom queries, Portlet User session/state, personalization
- **Portfolio Management & Financial Advisor Dashboard**
  - Portlet wiring click-2-action, charts/graphs
- **Portal Site Design**
  - Themes, skins, navigation, look-n-feel

The screenshot displays a banking portal interface with two main portlets. The top navigation bar includes links for 'My Portal', 'Administration', 'Edit my profile', and 'Log out'. Below this, there are links for 'New Page', 'Edit Page', 'Assign Permissions', and a search box. The main content area is divided into two portlets:

**Accounts Management portlet:** This portlet has two tabs: 'Transfer Funds' (selected) and 'Portfolio Allocation'. Under 'Transfer Funds', there are dropdown menus for 'SourceAcct:' (set to 'Checking') and 'TargetAcct:' (set to 'Checking'). An 'Amount:' field is present. A dropdown menu is open, showing options: 'Checking', 'Savings', and 'Investments'. Below these are 'Transfer Funds' and 'Transfer Results:' fields, and 'Back' and 'Next' navigation buttons.

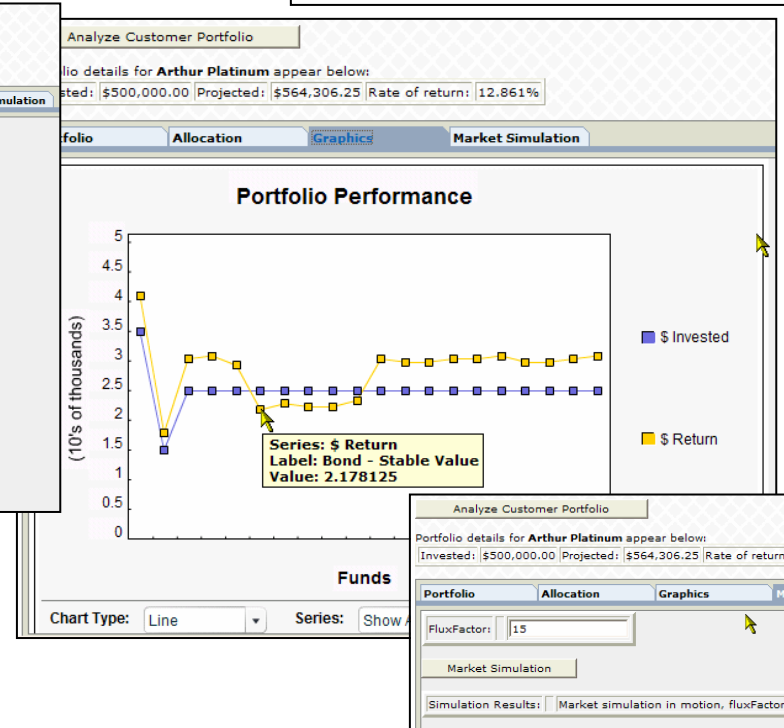

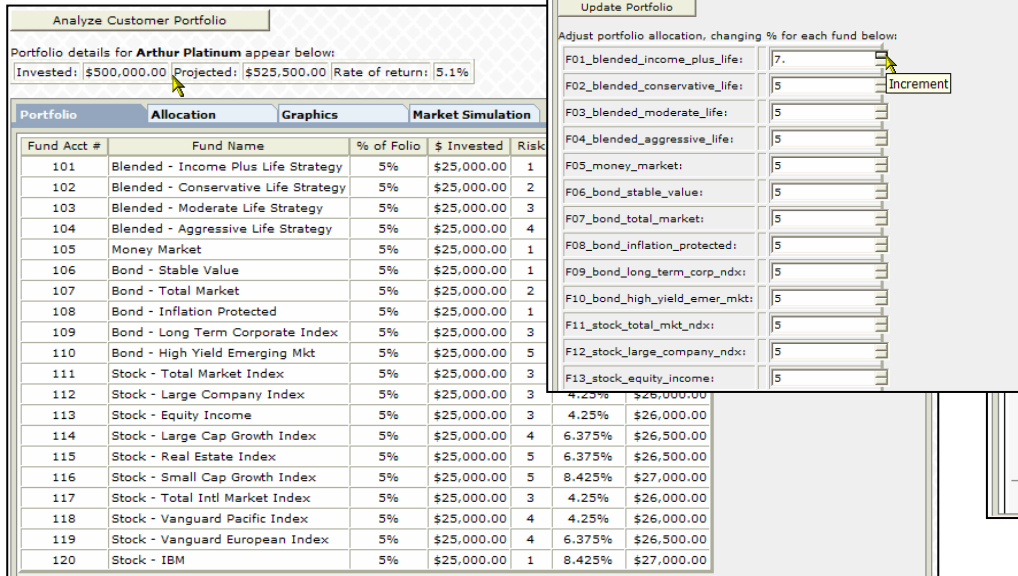

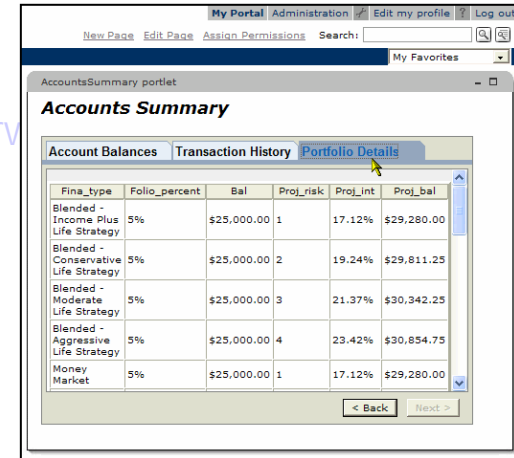

**Accounts Summary portlet:** This portlet has three tabs: 'Account Balances' (selected), 'Transaction History', and 'Portfolio Details'. It contains a table with the following data:

Acct_id	Cust_id	Acct_type	Bal
1	1	Checking	\$10,000.00
2	1	Savings	\$100,000.00
3	1	Investments	\$500,000.00

Below the table are input fields for 'Invested\_bal:' (\$500,000.00), 'Projected\_bal:' (\$526,997.50), and 'Projected\_return:' (5.4%). At the bottom are 'Submit' and 'Delete' buttons, along with 'Back' and 'Next' navigation buttons.

# Build Scenarios – Banking & Finance (Applying End-2-End Development)

- Portal Site Design
  - Themes, skins, naviga
- Dynamic Development and Debugging

## V6 “WebSphere Rapid Deploy” (WRD)

- To simplify the **development** experience for WebSphere applications by:
  - Increase the seamlessness of the iterative Build/Test cycle
  - Reduce or eliminate server restarts
    - During initial artifact creation (i.e. create Java, EJBs, Web Services, etc.)
    - During iterative build scenarios (i.e. coding the logic in Java, etc.)
- To simplify the **deployment** experience for WebSphere applications by:
  - Automating the process of installing an application on WebSphere
  - Reducing the amount of information that must be configured manually on WAS (i.e. Datasources, etc.)
  - Automating the process of activating incremental changes to an application on a running server (i.e. Add/Change code/configuration of an application)

# Dynamic Development (Avoiding the “RESTART” Situations)

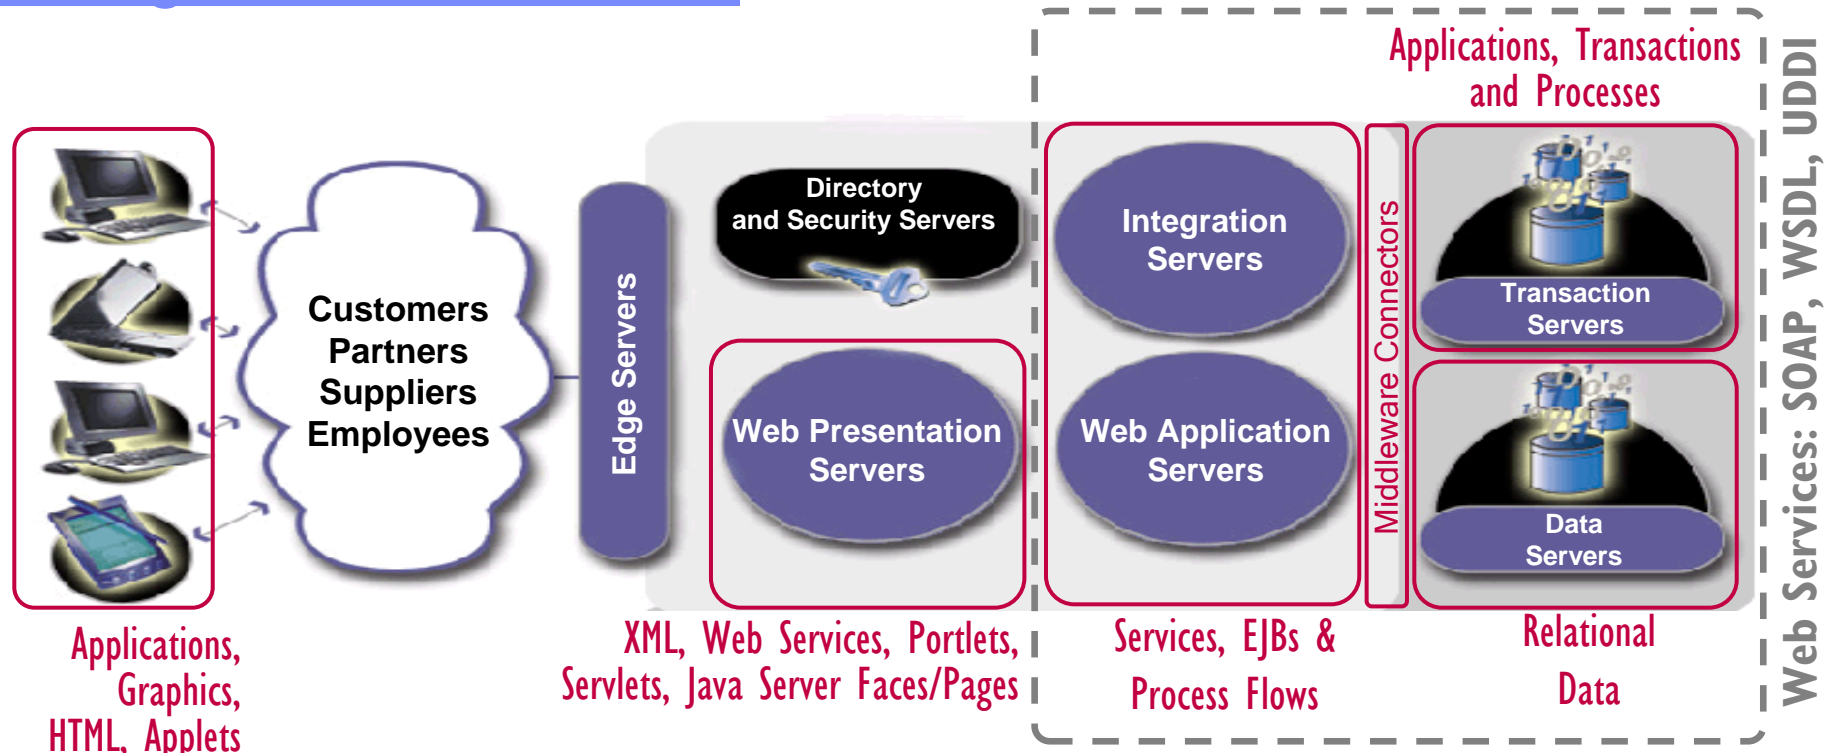

- Two main stages in RAD V6 dynamic development

- Creating New Artifacts
- Changing Existing Artifacts

-  AUTOMATIC hot re-deployment of changes
-  Manual quick APPLICATION level restart
-  Manual SERVER restart

WS Rapid Deploy (WRD) Dynamic Development Scenarios		
Development Activity	WAS5.1	WAS6.0
Create EAR Project	Plan to Restart Server	Dynamic (WRD)
Create Web Project	Plan to Restart Server	Dynamic (WRD)
Create EJB Project	Plan to Restart Server	Dynamic (WRD)
Create EJB with Logic	Restart Server (Manually)	Dynamic (WRD)
Change EJB	Restart Project EAR (Manually)	Dynamic (WRD)
Create JSP	Dynamic (Web Container)	Dynamic (Web Container)
Change JSP	Dynamic (Web Container)	Dynamic (Web Container)
Create JavaBean in Web Project	Dynamic (Web Container)	Dynamic (Web Container)
Change JavaBean in Web Project	Dynamic (Web Container)	Dynamic (Web Container)
Create JavaBean in regular Java Project and Reference from EJB or Web project artifacts	Restart Project EAR (Manually)	Dynamic (WRD)
Change JavaBean in regular Java Project	Restart Project EAR (Manually)	Dynamic (WRD)
Create Web Service (Exposing a JavaBean or EJB)	Restart Server	Dynamic (WRD)
Change a Web Service	Restart Server	Dynamic (WRD)

# Design & Construction Tools End-2-End

# SOA Business Driven Development – Roles and Primary Tools

# Business Models Driven into J2EE Workflows

- Business process model - Simulate cost/time savings and assign business measures (KPIs)

**WebSphere Business Modeler**

The interface shows a process flow diagram with a decision diamond 'Achieve Final Approval?'. The 'Yes' path leads to 'Send Confirmat...' and the 'No' path leads to 'Send Risk Rejection...'. Below this is a more detailed process flow diagram. To the right is a 'Resource Cost Analysis' table.

Resource Cost Analysis	
	Start Time
	Thursday, January 1, 2004 12:00:00 AM CST
Total	
Average Cost Per Time Unit	\$68.31 / 1 Hours
Average One Time Cost	\$0.00
Average Cost Per Quantity	
Average Cost Per Quantity & Time Unit	
Annual Per TimeUnit Cost	\$590,163.93

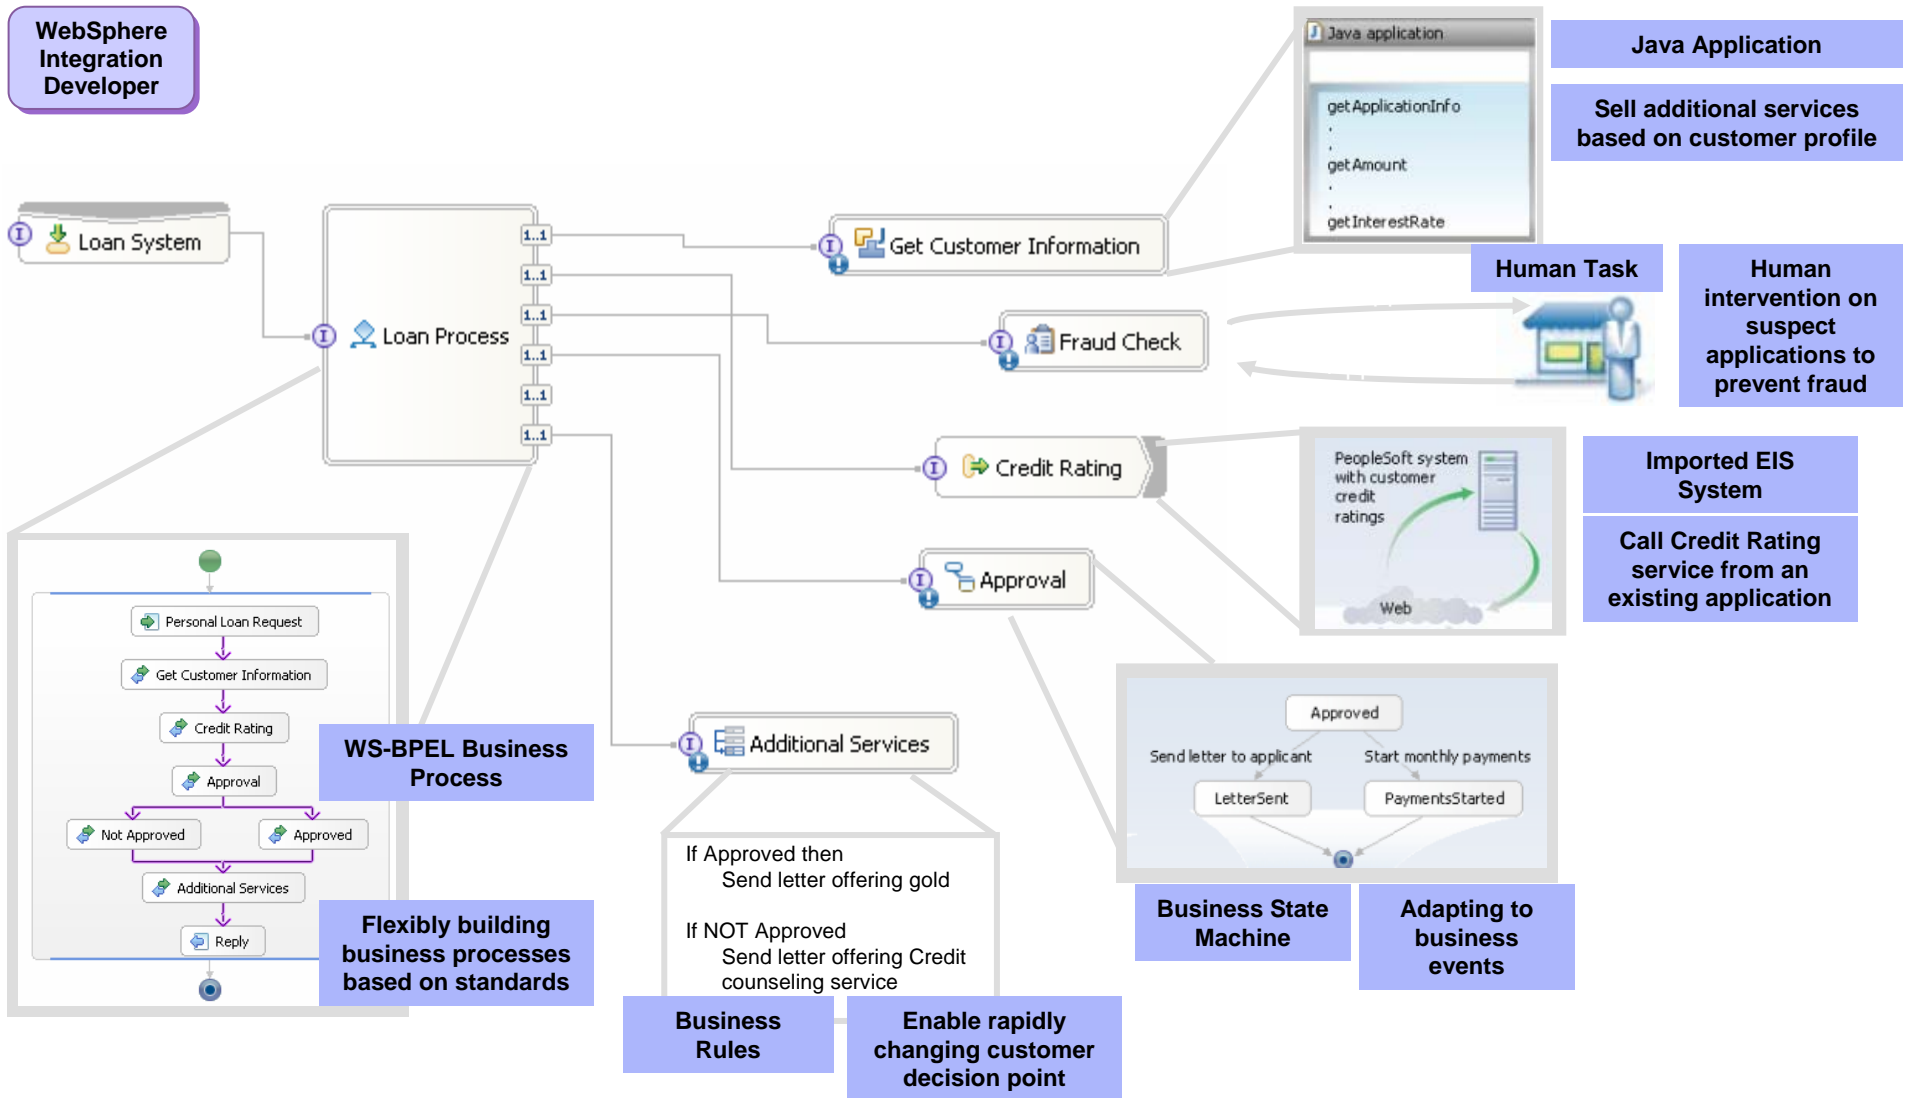

- Re-use business process model in visual workflow tools to build SOA J2EE web services

**WebSphere Integration Developer**

The interface shows a business process diagram on the left and a BPEL workflow diagram on the right. The business process diagram starts with 'Receive Application' from 'Customers' (Call Center, Branch Offices). It flows through 'Create Application' (CICS) and 'Check Credit' (Microsoft .net) to a decision 'Auto Approve?'. If not auto-approved, it goes to a 'Loan Officer' who performs 'Risk Assessment', leading to 'Approved' or 'Denied'. The BPEL diagram, titled 'QuickLoanProcess.bpel', starts with 'Account Verification (To-Be) Complete Receive', followed by 'Determine Applicant Eligibility', 'Initial Application Review', and a parallel split into 'Credit Report Service - Electronic' and 'Credit Risk Assessment - Business Rule'. The latter leads to 'Request More Documentation', then 'Final Application Review', which splits into 'Provide Pricing & Approval' and 'Generate Decline'. Both paths converge to 'Account Verification (To-Be) Complete Reply'.

# SOA Example - Composite Application

# Bridging the Gap between Business and IT: How?

## Business Models Identify Process Activities

Business and I/T can use a common language a.k.a. "Process Integration"

## I/T Components exposed as SOA Services

How do I integrate to my existing systems?

# Build Tools - End-2-End Design & Construction

## Development Roles

Name

Title

Company

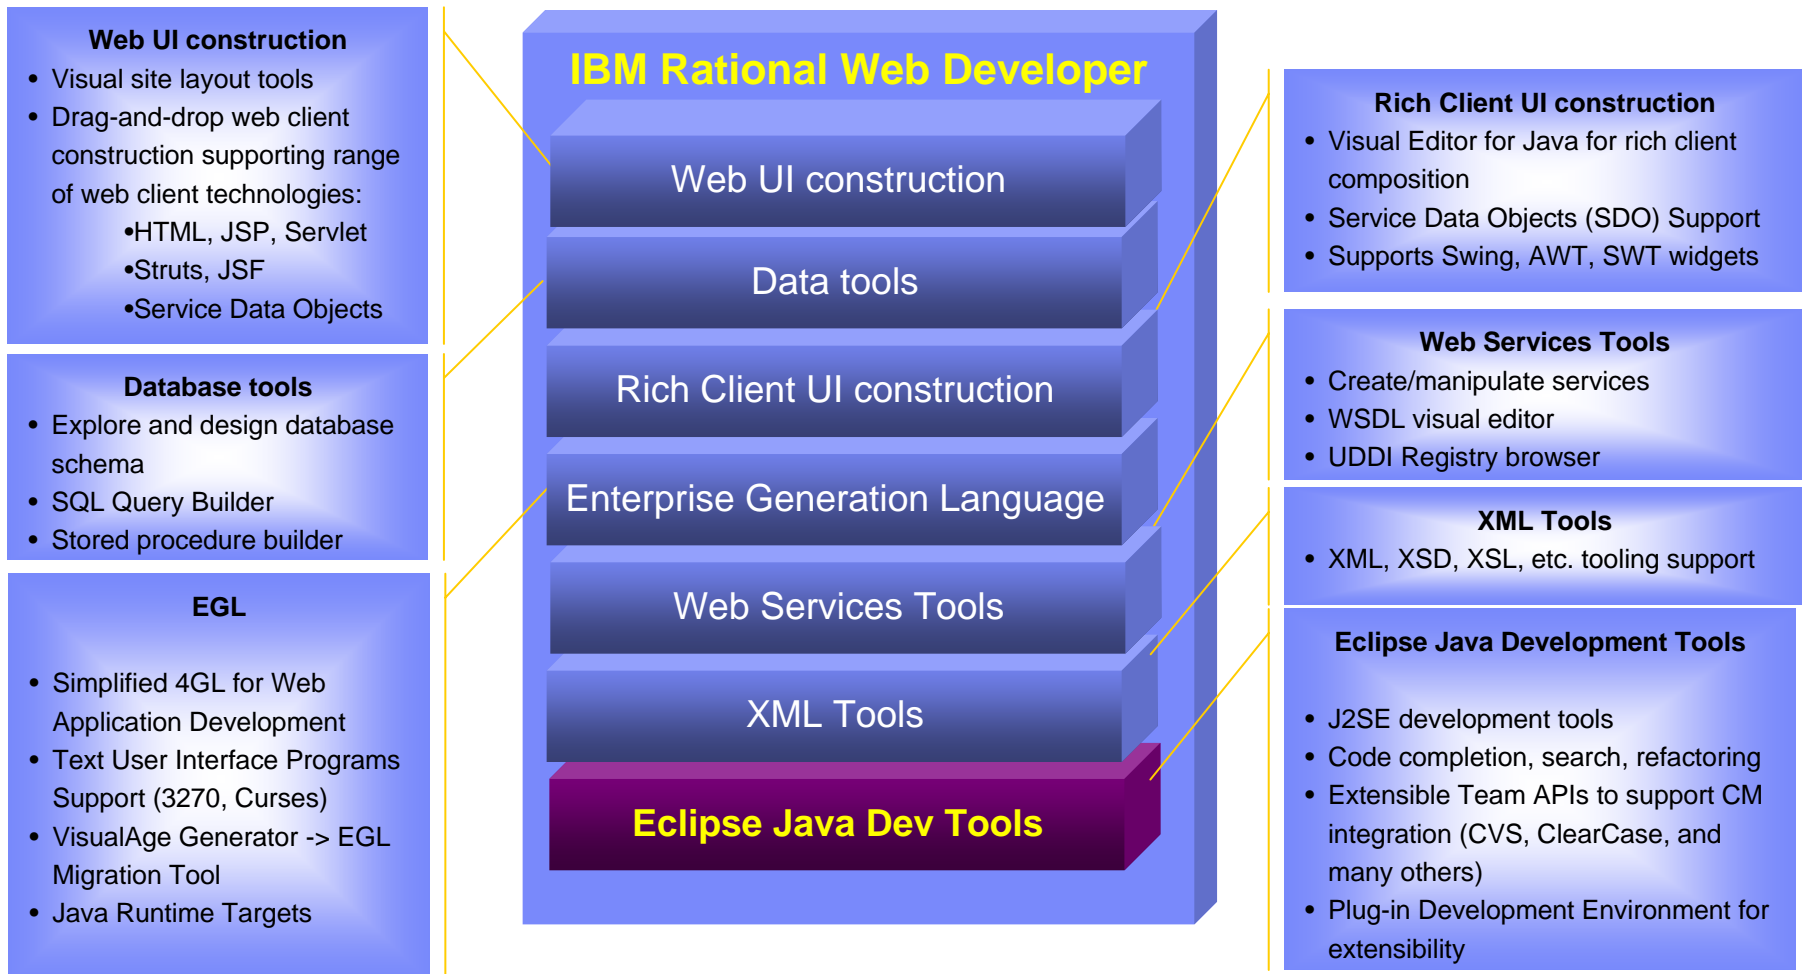

# Design and construction tools

# IBM Rational Web Developer

*Follow on to WebSphere Studio Site Developer*

*New Rapid Application Development capabilities focused on ease of use*

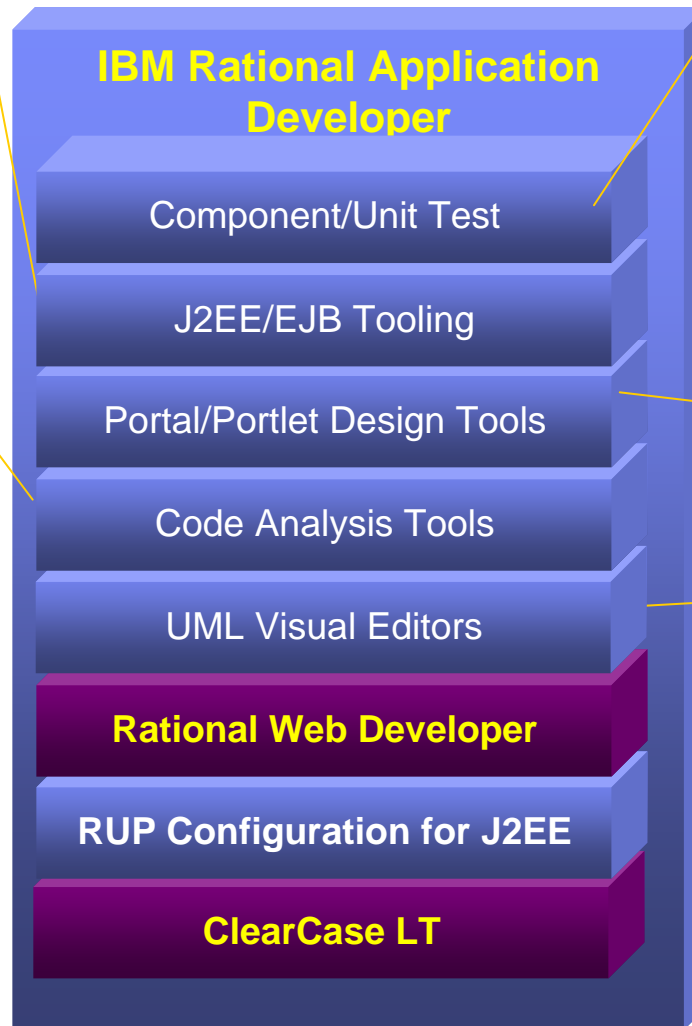

# IBM Rational Application Developer

*Follow on to WebSphere Studio Application Developer*

- J2EE/EJB Tooling**
- J2EE construction tools
  - Supports WebSphere and WebLogic
  - Supports J2EE 1.3 and 1.4
  - Rapid Deployment for WAS v6
  - Integrated WAS test environments
  - O/R mapping

- Code Analysis Tools**
- Both static source code analysis and dynamic runtime analysis
  - Source code analysis for rule violation detection: Globalization, J2EE/J2SE Best Practices, Private API Usage, Performance
  - Sequence diagram runtime trace with performance, thread and code coverage annotation
  - Advanced memory leak detection
  - Remote data collection across multiple servers
  - User-defined run-time probes
  - Interactive reports and metrics

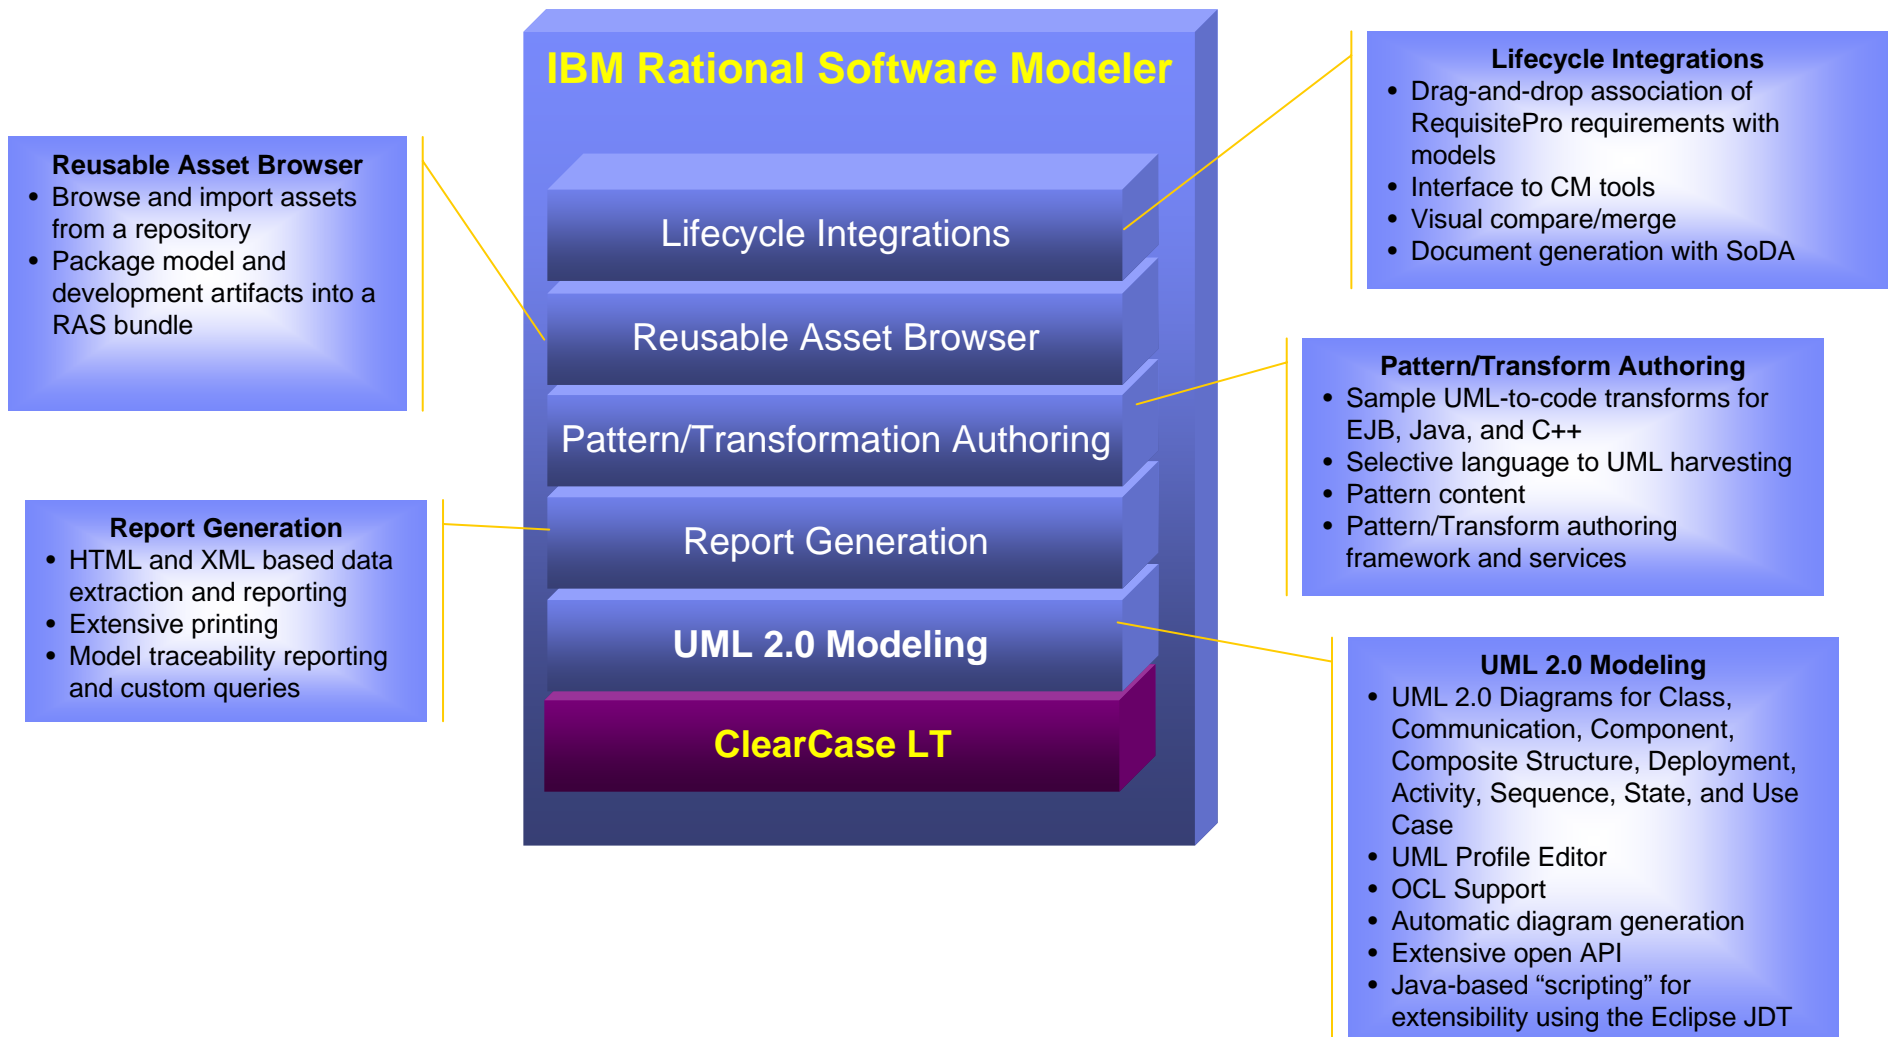

- Component/Unit Test**
- JUnit-based testing of Java components, EJBs and Web Services
  - Test prioritization recommendation based on code analysis
  - Automated test case generation through usage of test patterns
  - Datapool editor for data-driven testing
  - Optimized unit testing through a set of metrics in the test creation wizard
  - Test creation wizard offers a set of test patterns to automatically generate test

- Portal/Portlet Design Tools**
- Visual Portal site and page layout tools
  - Visual Portlet layout and preview
  - Integrated Portal test environment

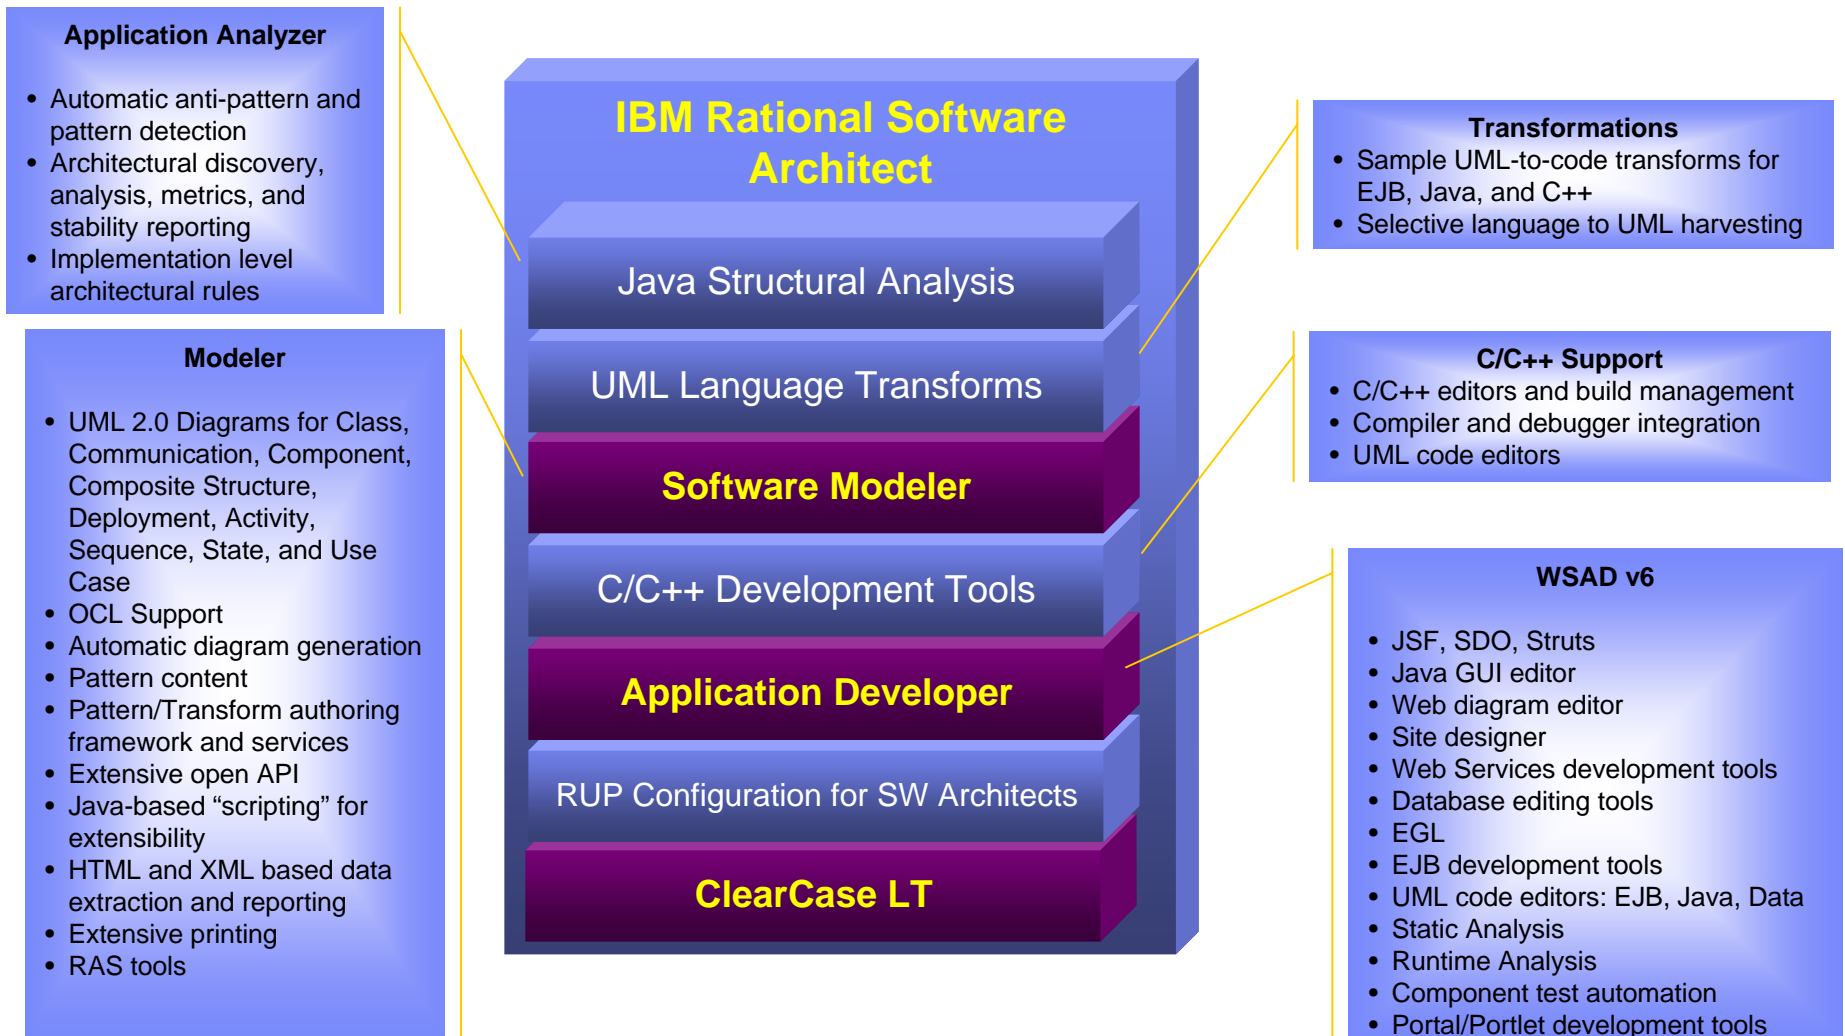

- UML Visual Editors**
- Class diagrams for Java/EJB structure
  - Sequence diagrams for method body visualization
  - IDEF1X/IE diagrams for Database and XML schema
  - Dynamic topic diagrams
  - Javadoc integration
  - Visual refactoring

# IBM Rational Software Modeler

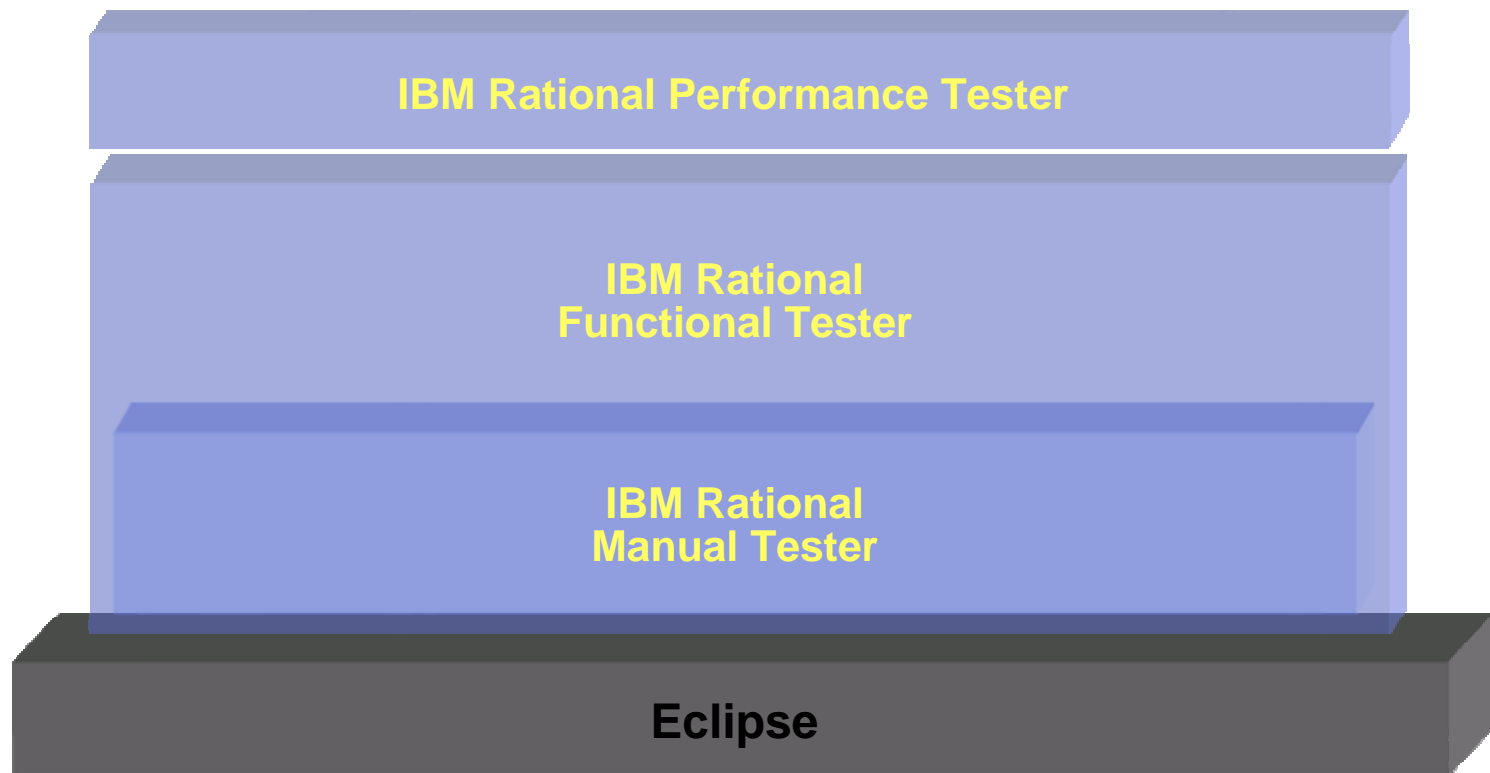

# IBM Rational Software Architect

# Software quality tools

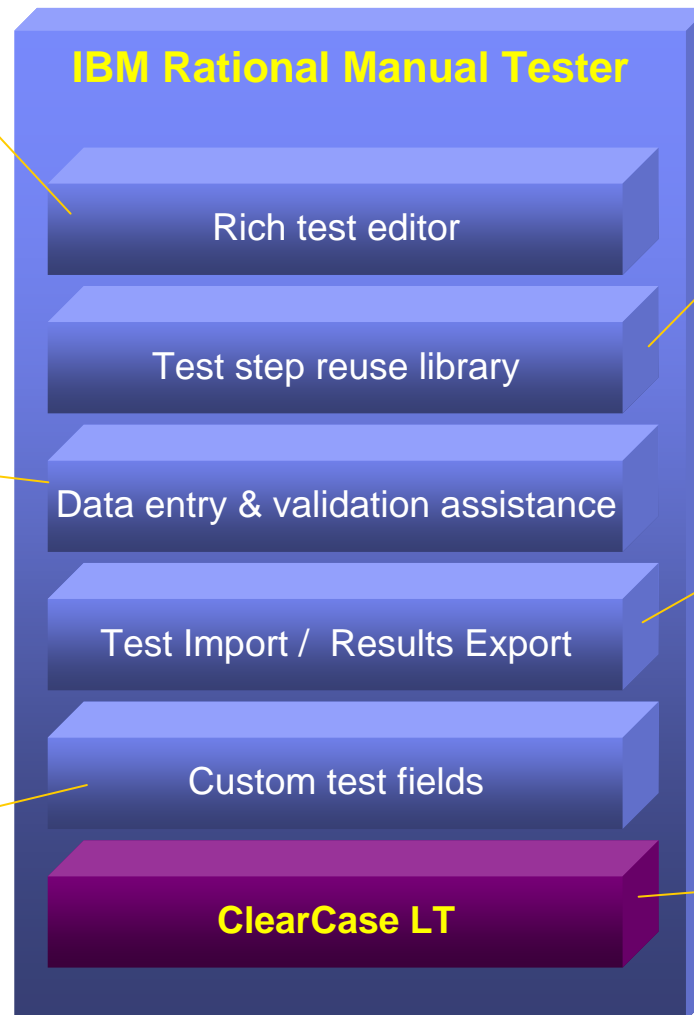

# IBM Rational Manual Tester

**Manual test authoring and execution**

- Rich Text Editor**
- Modify test font, size, color; attach images and files
  - Supports creation of both test steps and verification points
  - Ensures clarity of test step direction and consistency of test execution

- Tool Assistance**
- Automated data entry
  - Automated data comparison and results storage
  - Reduces opportunity for manual error during test execution

- Customizable**
- Add new data fields to individual test steps
  - Apply internally-defined naming conventions

- Reuse Library**
- Library for common test procedures
  - Drag-and-drop construction of new tests
  - Automatic global update when modifying any one instance of linked content

- Import/Export**
- Imports manual test source files from Microsoft Word, Microsoft Excel and Rational TestManager
  - Exports test results to CSV format for additional analysis

- ClearCaseLT "in the box"**
- Supports parallel development of manual tests
  - Enables remote test access for distributed teams

# IBM Rational Functional Tester

**Automated functional regression testing**

**GUI Technologies**

- Automates regression testing of Java, .NET, Web and terminal emulator-based applications

**Data-driven Testing**

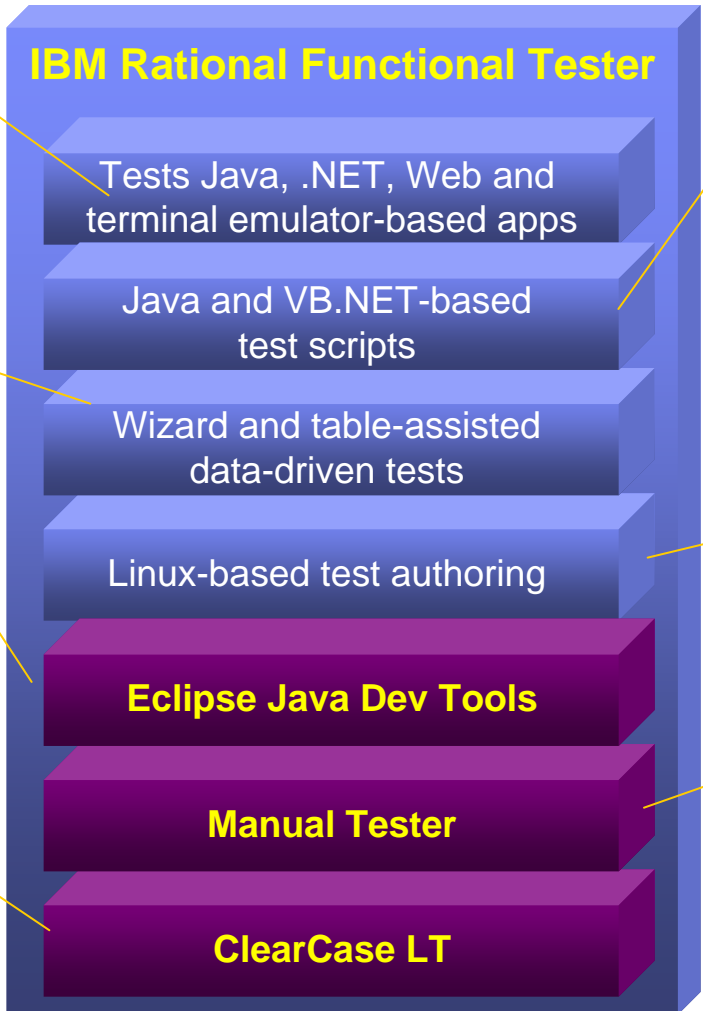

- Simplified data-driven testing enabled by wizards and Excel-like data tables

**Eclipse availability**

- When using Java scripting, runs inside Eclipse/RSA/RAD shell
- Full Eclipse JDT features are accessible
- Accessible to developers from within their IDE

**ClearCaseLT "in the box"**

- Supports parallel development of manual tests
- Enables remote test access for distributed teams

**Test Script Language**

- User has choice of two test script languages – Java and VB.NET
- Use of Java implies editing and debugging in Eclipse/RAD/RSA-based editor
- Use of VB.NET implies usage of Microsoft VS.NET-based editor/debugger
- Identical capabilities in both editors

**Improved Linux support**

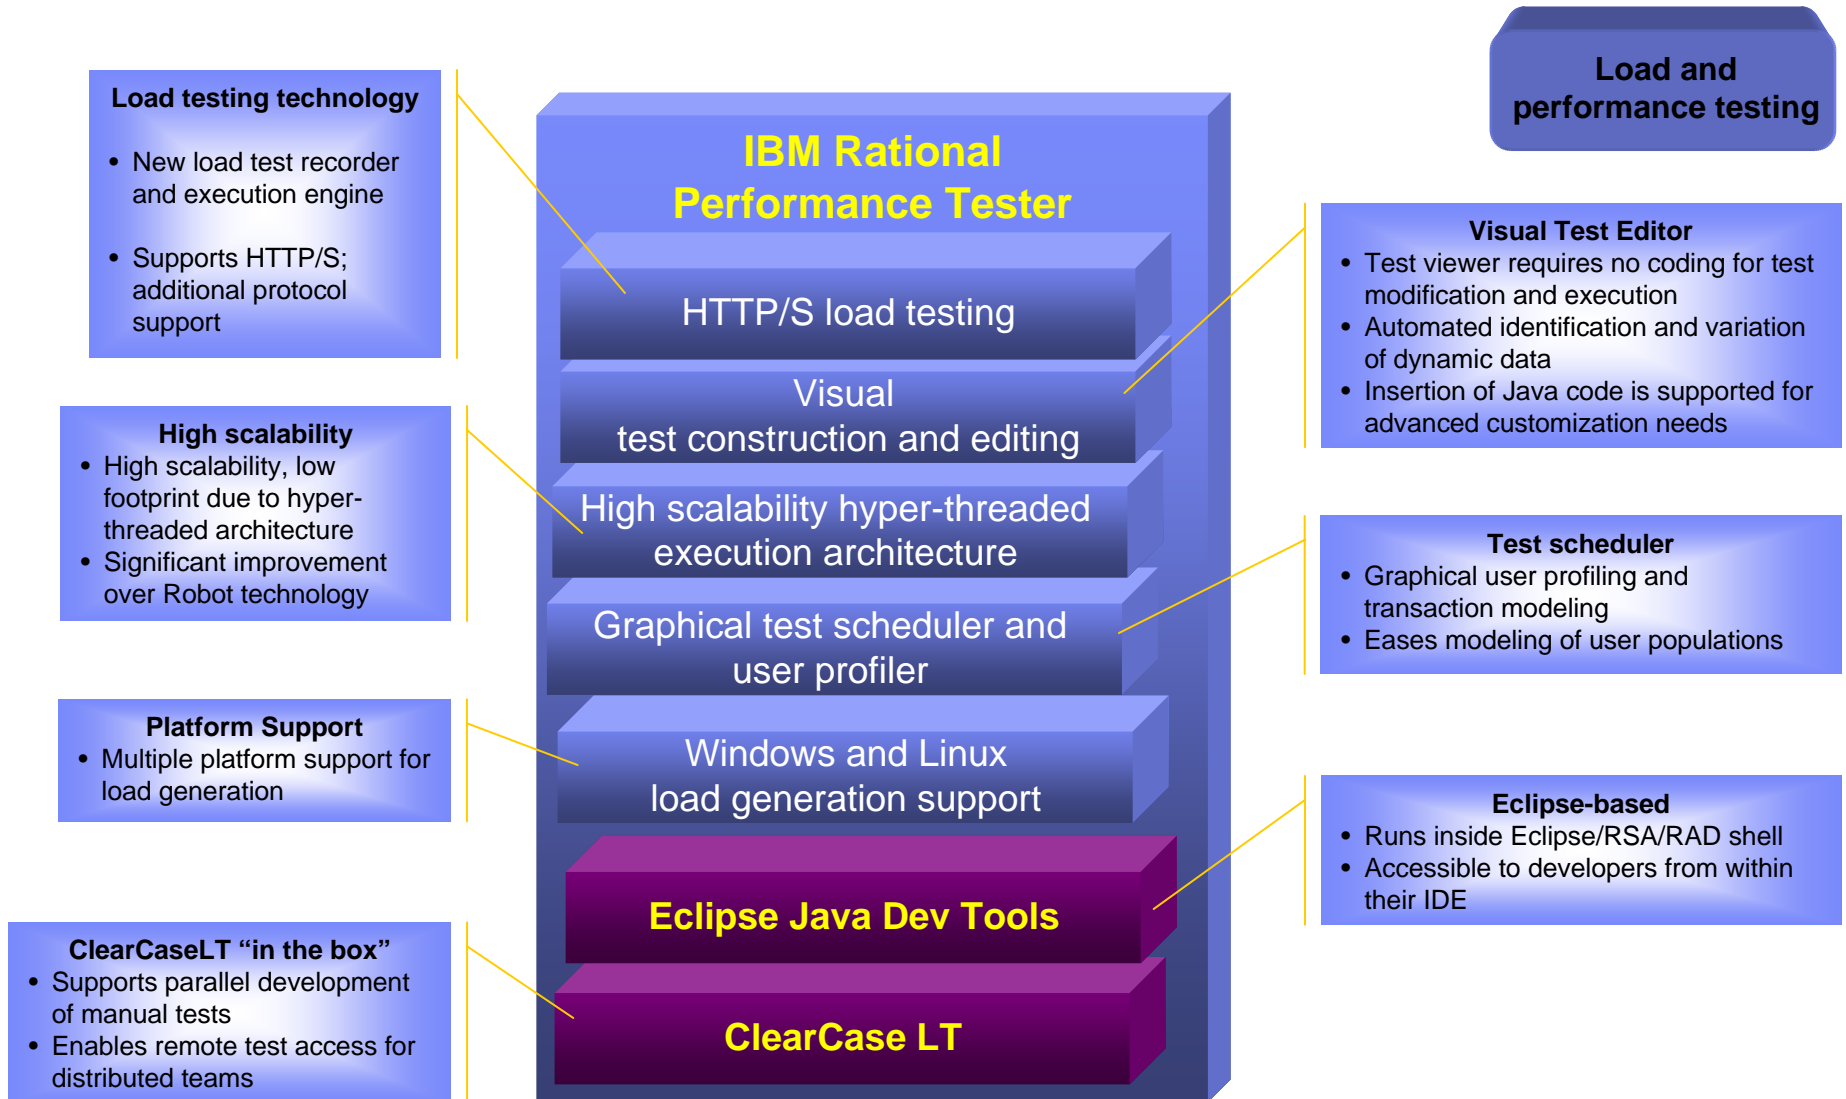

- Users can author and modify test scripts on Linux (no script recorder)
- Scripts can also be executed on Linux

**Manual Tester in the box**

- Customers receive one Manual Tester license per Functional Tester license
- Improve return on manual testing efforts while adopting automated test methods

## End-2-End Application

Demo

"Accelerate development...  
increase productivity...  
maximize ROI !!"

### Iterative Development Demos

→ Model, Build, Test, Debug, Deploy

- UML Model Visualizations
- Dynamic Development
- Automated Deployment

### J2EE+ Builder Demos

→ Includes JSF, SDO, Web Services

- Java
- Databases
- Web Services
- Drag-n-Drop GUI

## Quick Success Applications

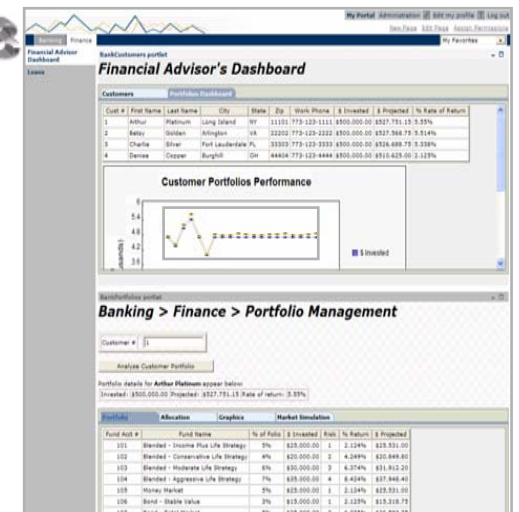

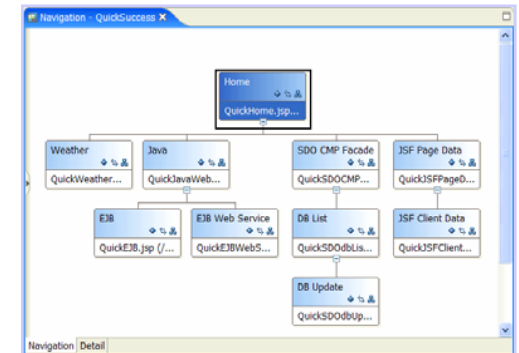

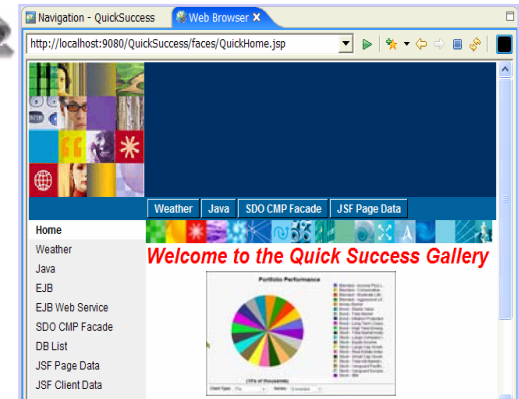

Demo

- Easy build scenarios
- You watch or build
- < 10 minutes each

## Banking & Finance Web/Portal Applications

Demo

- Banking Accounts
- Portfolio Management
- Financial Advisor Dashboard

## End-2-End Application

"Accelerate development...  
increase productivity...  
maximize ROI !!"

### Iterative Development Demos

- ➔ Model, Build, Test, Debug, Deploy
- UML Visualizations
- Dynamic Development
- On-the-fly code changes
- Incremental build engine
- Testing for Java, EJBs, Web Services, etc...
- Dynamic Interactive Debugger
- Automated Application Packaging and Deployment

### J2EE+ Builder Demos

- ➔ Includes JSF, SDO, Web Services
- Java and EJBs (Session, CMP)
- Service Data Objects (SDO)
- SDO CMP Session Facades
- XML and XSD Schemas
- XML SDO JavaBean Bindings
- JavaServer Faces (JSF)
- Database and SQL
- Web Services Creation and Consumption

## Quick Success Gallery Applications

- Easy J2EE build scenarios
- Internet Weather Web Service
- JavaBean Web Service
- EJB Web Service
- Service Data Objects (SDO)
  - Database Mediator: Select, Insert, Update, Delete
- Java Server Faces (JSF)
  - Rich UI Controls, Charts/Graphs, drag-n-drop
  - Custom coding, Event Driven, MVC Framework

#2

## Banking & Finance Web/Portal Applications

- Transfer Funds
- Transaction History
- Account Management
- Portfolio Management
- Asset Allocation
- Graphical portfolio analysis
- Stock Market Simulation
- Mutual Funds, Stocks, Bonds, Money Mkt
