

# Searching the Business Integration Connect PDF documents

To search the IBM WebSphere Business Integration Connect 4.2.0 PDF documentation set, complete the following steps:

1. Launch the Adobe Acrobat Search dialog in any of the following ways:
  - Click **search WebSphere Business Integration Connect PDF documents**.
  - Click the binocular button on the toolbar.
  - Select **Edit > Search > Query**.
2. In the text field of the Search dialog, enter a search term using one or more words, with no quotation marks.
3. Click **Search**.
4. The Search Results dialog displays the following:
  - If the searched term occurs in only one document, that document is displayed with the searched term highlighted.
  - If the searched term occurs in multiple documents, a list of all documents that contain the term is displayed. To open a document, select its title and click **View**, or double-click the title. Once opened, each occurrence of the searched term is highlighted within the document.
  - If the searched term does not appear in the documentation set, a message is displayed indicating that no documents match your query.
5. To navigate between multiple search hits, even across separate documents, select **Edit > Search > Next/Previous**, or press Ctrl+] and Ctrl+[.

For more information about constructing search queries and using the Adobe Acrobat Reader search, see the **Help** menu in your Adobe Acrobat Reader.

**Note:** If the Adobe Acrobat index selection dialog does not appear, you may need to install Adobe Acrobat Reader version 4.05 or higher, with Search option. The software can be downloaded free of charge from <http://www.adobe.com>.

## Revising your PDF search selection

To search across another PDF documentation set or to change your current search index selection, do the following:

1. Launch the Adobe Acrobat Search dialog in any of the following ways:
  - Click **search WebSphere Business Integration Connect PDF documents**.
  - Click the binocular button on the toolbar.
  - Select **Edit > Search > Query**.
2. In the Search dialog, click **Indexes**. The Index Selection dialog appears.
3. If you see an entry for the index you want to search, make sure that it is checked, click OK, and skip the remaining steps. Your system is already properly configured to begin searching that PDF document set. (For example, the Business Integration Connect search index is called *wbic420* or *wbic420\_express*, which should be displayed as a pre-selected entry). If the search index that you want does not appear in the Index Selection dialog, proceed to the next step.
4. Click **Add**.
5. Navigate to the directory containing the desired search index and select its corresponding .pdx file. For example, the Business Integration Connect search index, *wbic420.pdx* or *wbic420\_express.pdx*, is located in the <documentation\_installation\_directory>/doc/search\_index directory.
6. Click **Open**. The index now appears in the Index Selection dialog, with its check box selected.

7. If any other indexes appear in the Index Selection dialog, you can deselect them so that the search is confined to only the PDF documents you want to search. (You can reselect any of the indexes at a later time to search other document sets.)
8. Click **OK**. Your index is now ready for searching. It remains selected for future Acrobat Reader searches, until you change the selection.
