

# The Cutting Edge of Web Applications

How WebSphere's Next Generation  
Application Server Brings New  
Value to Your Business

*2nd Quarter 2002*

**WebSphere** software

# A Version 5 Perspective

Key version 5 themes described at the May, 2002 launch...

- A comprehensive, build-to-integrate platform...

- Highly integrated application development...

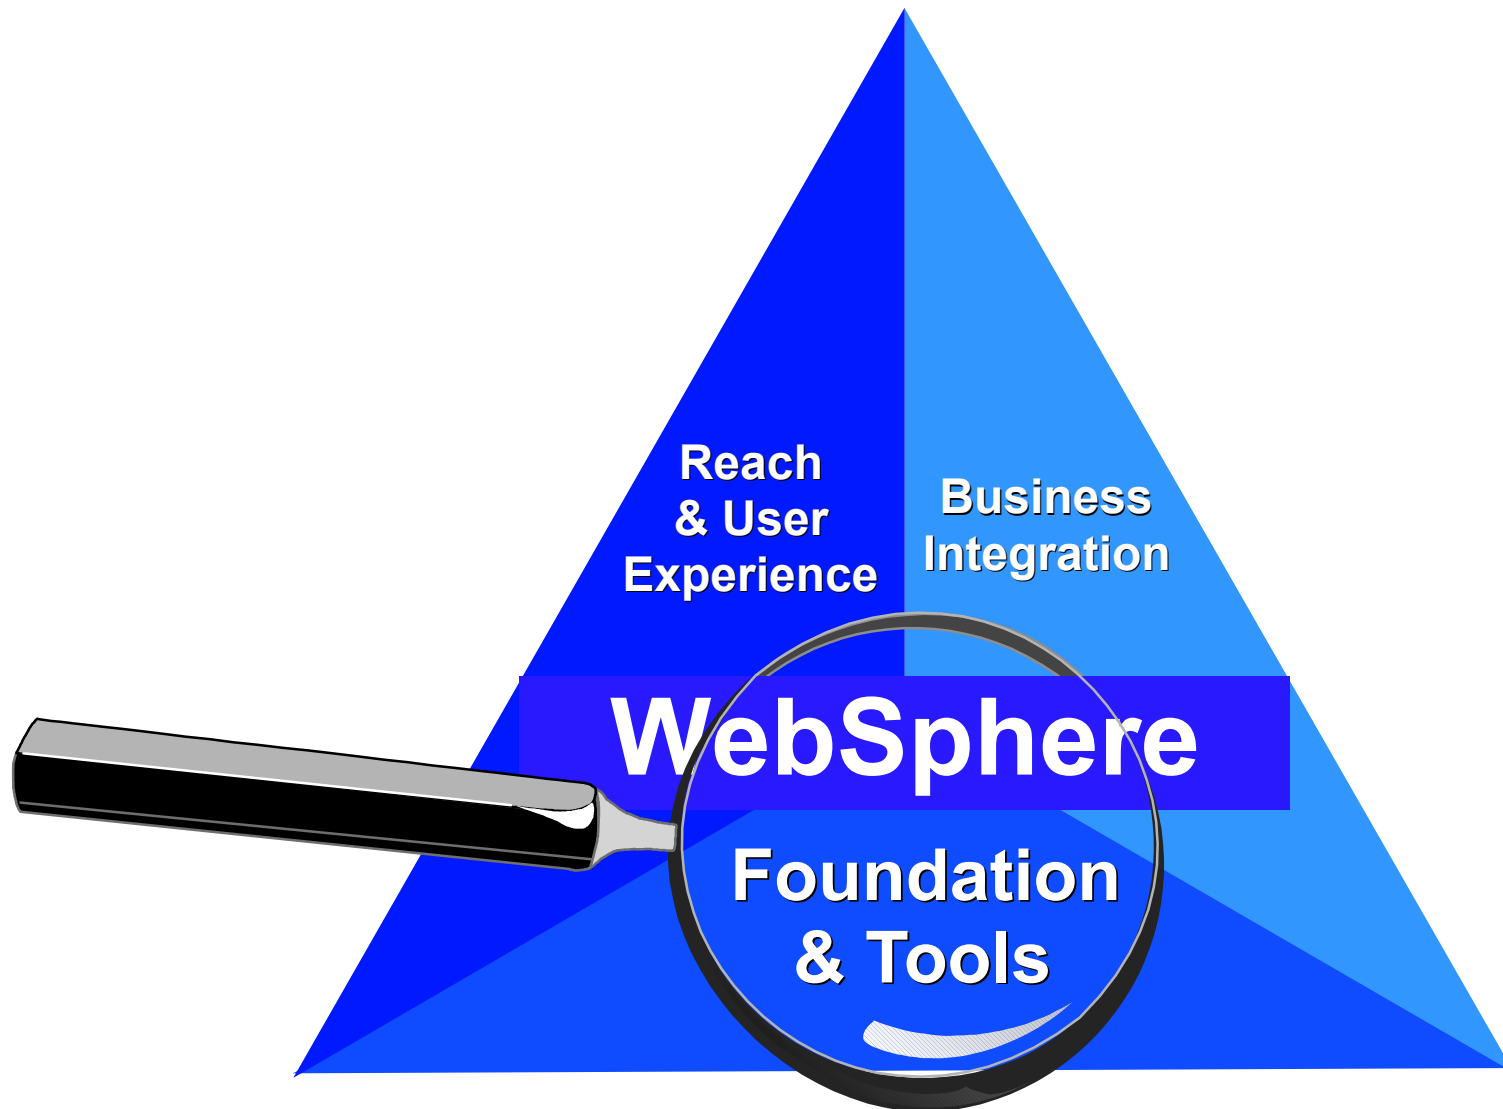

- Intelligent end-to-end optimizations...

- Agile deployment and administration...

# Session Objectives

- Review the role that WebSphere Application Server and WebSphere Studio play in an e-business solution
- Consider how WebSphere can benefit your business

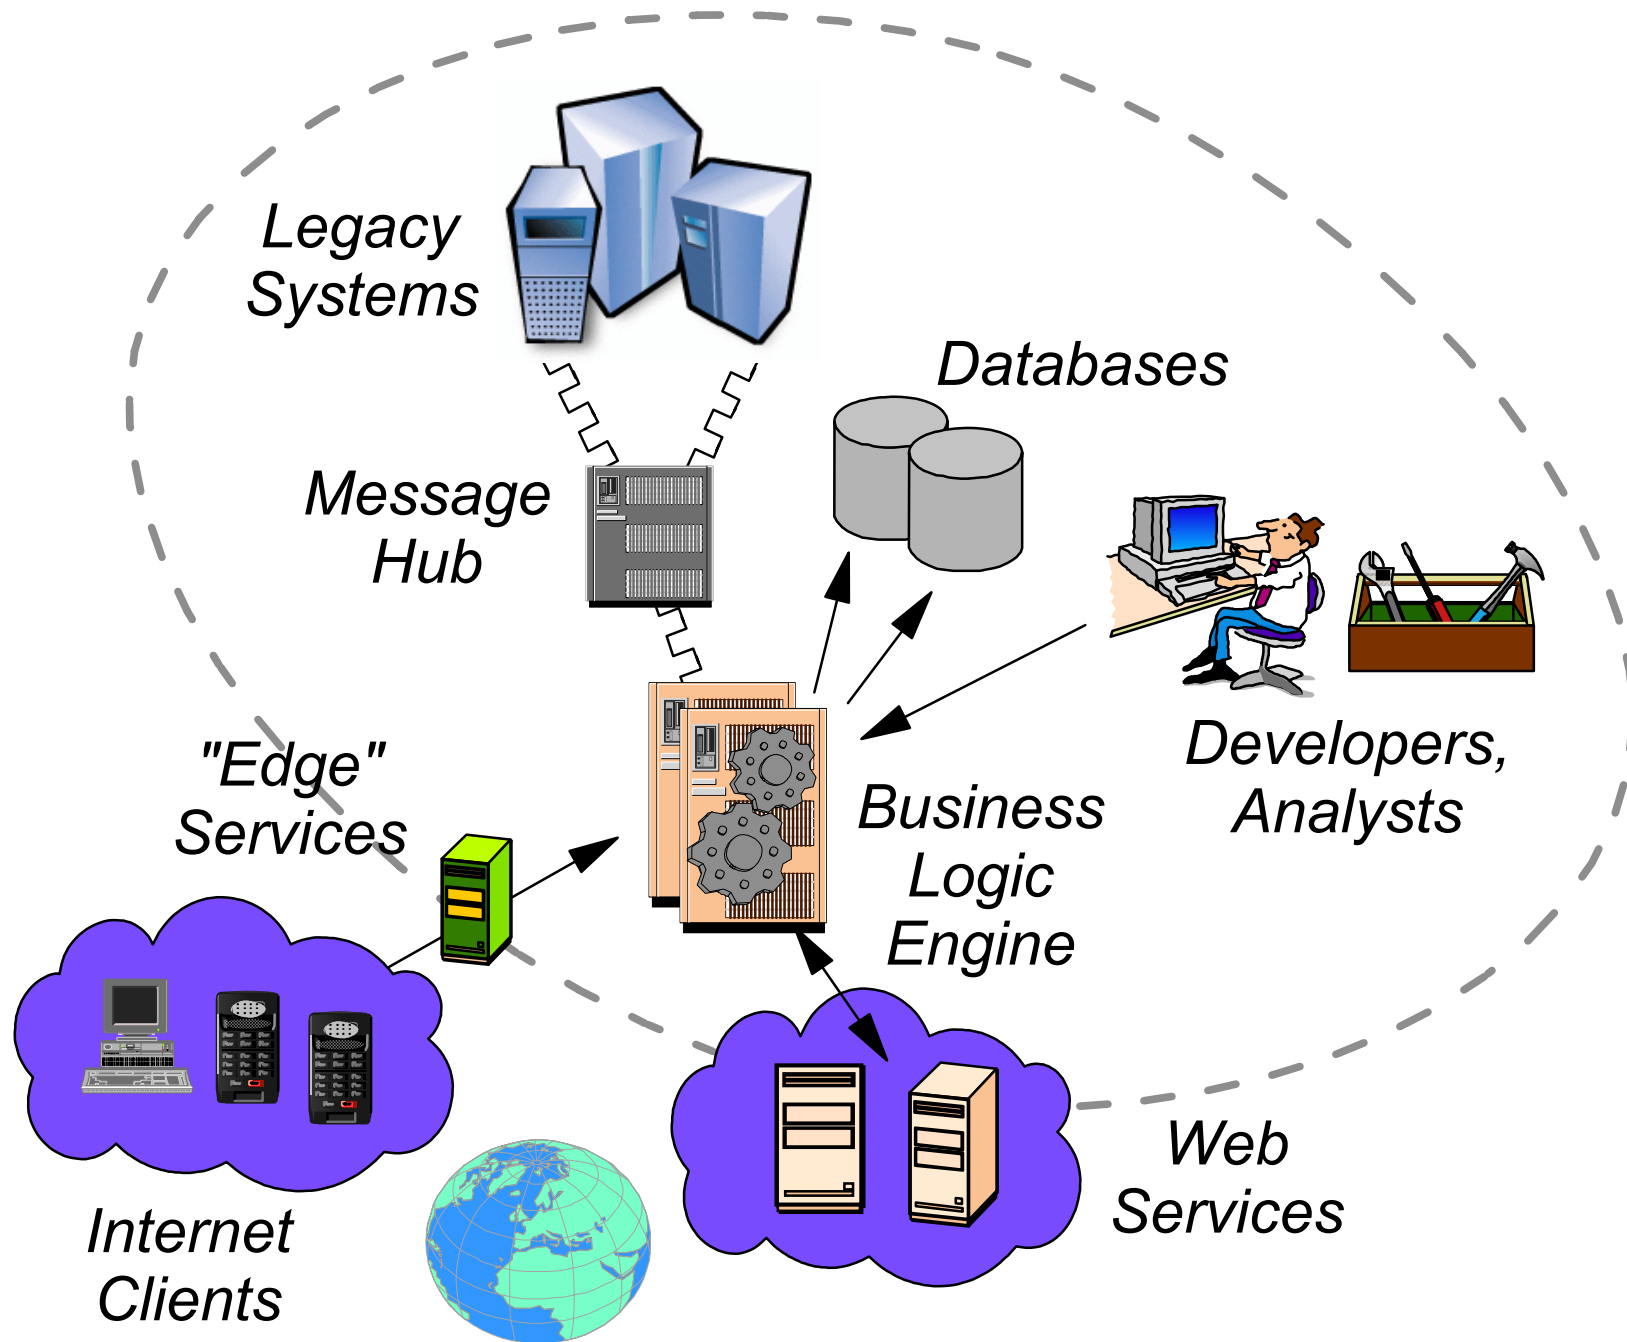

# Agenda

- The Evolving Role of Application Servers
  - WebSphere Application Server Case Study
  - WebSphere Foundation and Tool Offerings
  - Next Steps

# Application Server Fundamentals

# Making Engines Work Better

## *Optimizations*

### Deployment Concern

- Administration-Based
- No Source Code Changes

## *Extensions*

### Development Concern

- Programming Model
- Associated Tools

# Business Value

Optimizations

Performance

Availability

Scale

+

Extensions

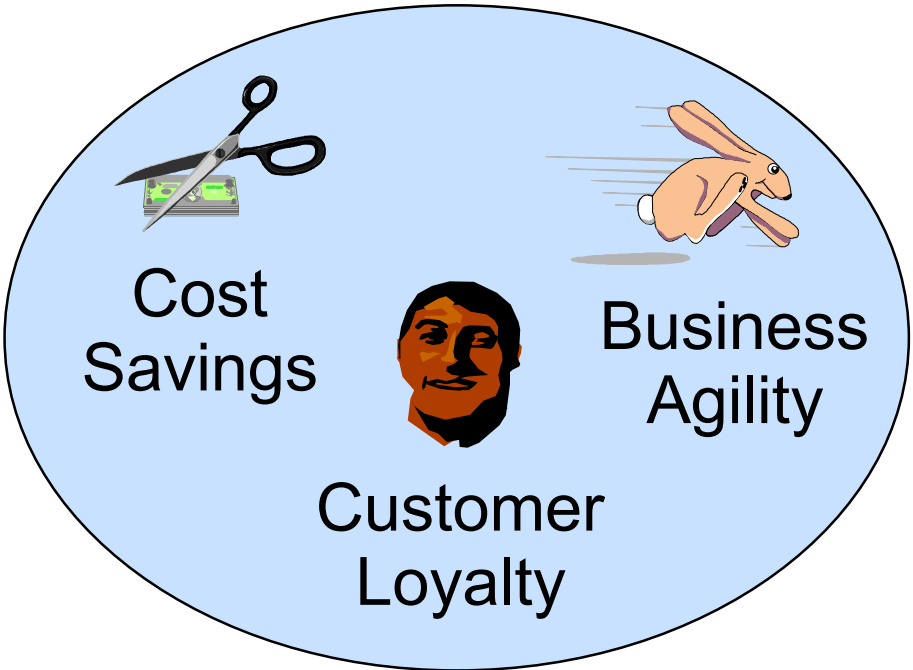

Productivity

Flexibility

Integration

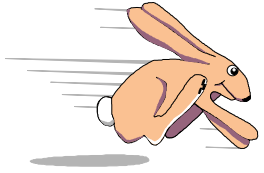

# Revisiting the Agenda

- The Evolving Role of Application Servers
- WebSphere Application Server Case Study
- WebSphere Foundation and Tool Offerings
- Next Steps

# Web Banking Online (WBOonline)

- Global finance company serving international customers
- Common business drivers   
- Requires reliable, high performance infrastructure
- Fully committed to Java and J2EE for new applications
- Needs to leverage significant existing assets
- Diverse and complex processing requirements

Complex interactions with backend systems

Process automation and human interaction

Background, parallel, and asynchronous processing

Web services and support for "service-oriented architectures"

*To be explained shortly*

# New Credit Card Application

## Requirements:

1. *Obtain customer account information.*
2. *Determine if customer is "gold or above". If so, issue the card.*
3. *Determine the credit rating. If "positive", issue the card.*

Consider

**Extensions**

first, then

**Optimizations**

To satisfy step 1, we need to navigate various CICS screens...

- So we need to connect...
- And drive multiple interactions...
- To produce a business result

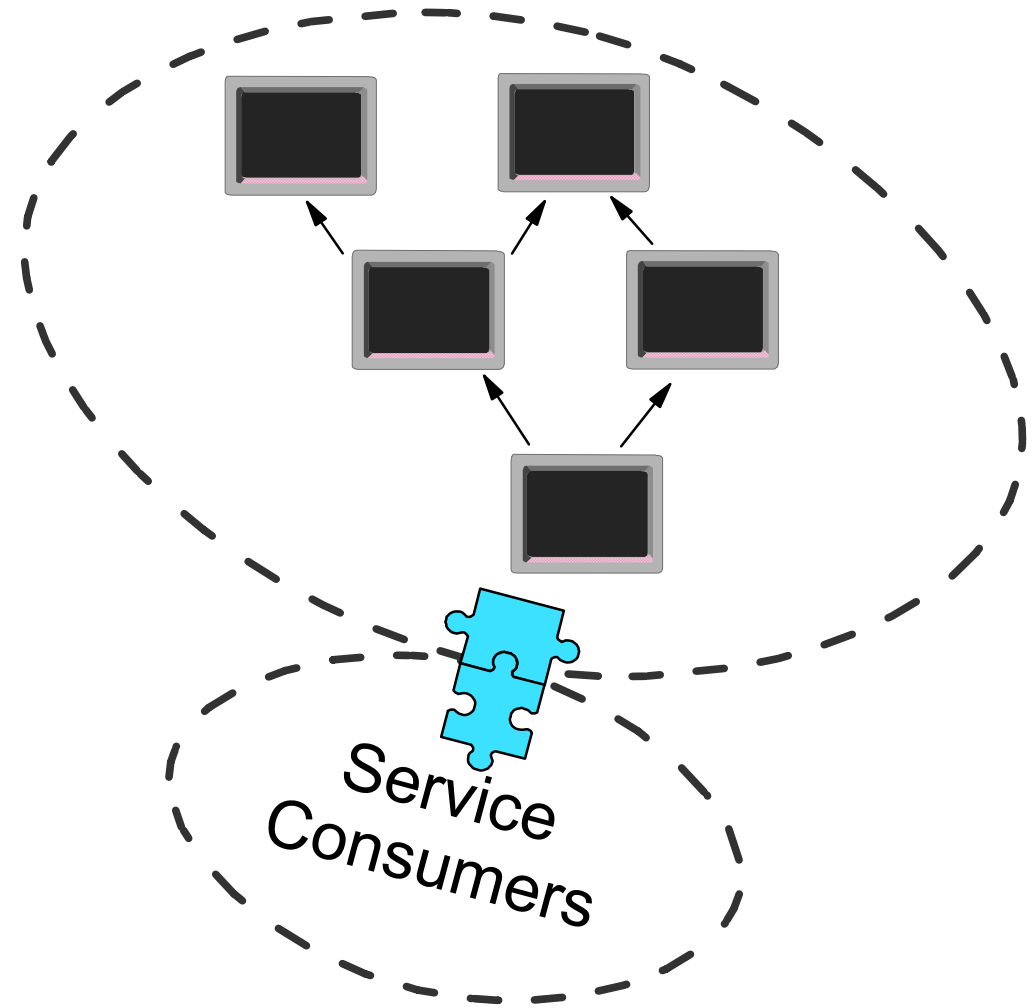

Why not define all of this as a reusable *service*?

# Service-Oriented Architecture

*What if virtually any kind of software resource could be seen through the lens of a business service interface?*

Benefits:

- Faster assembly of new applications
- Improved consistency
- Greater leverage of existing investments

WebSphere Application Server and  
WebSphere Studio deliver this!

# Externally Manage Business Policy

2. Determine if customer is "gold or above". If so, issue the card.

Business Analysts

Maintain and  
schedule rules  
**OFTEN**

Developers

Define and  
invoke rules  
**ONCE**

# Why Externalize Rules and Policies?

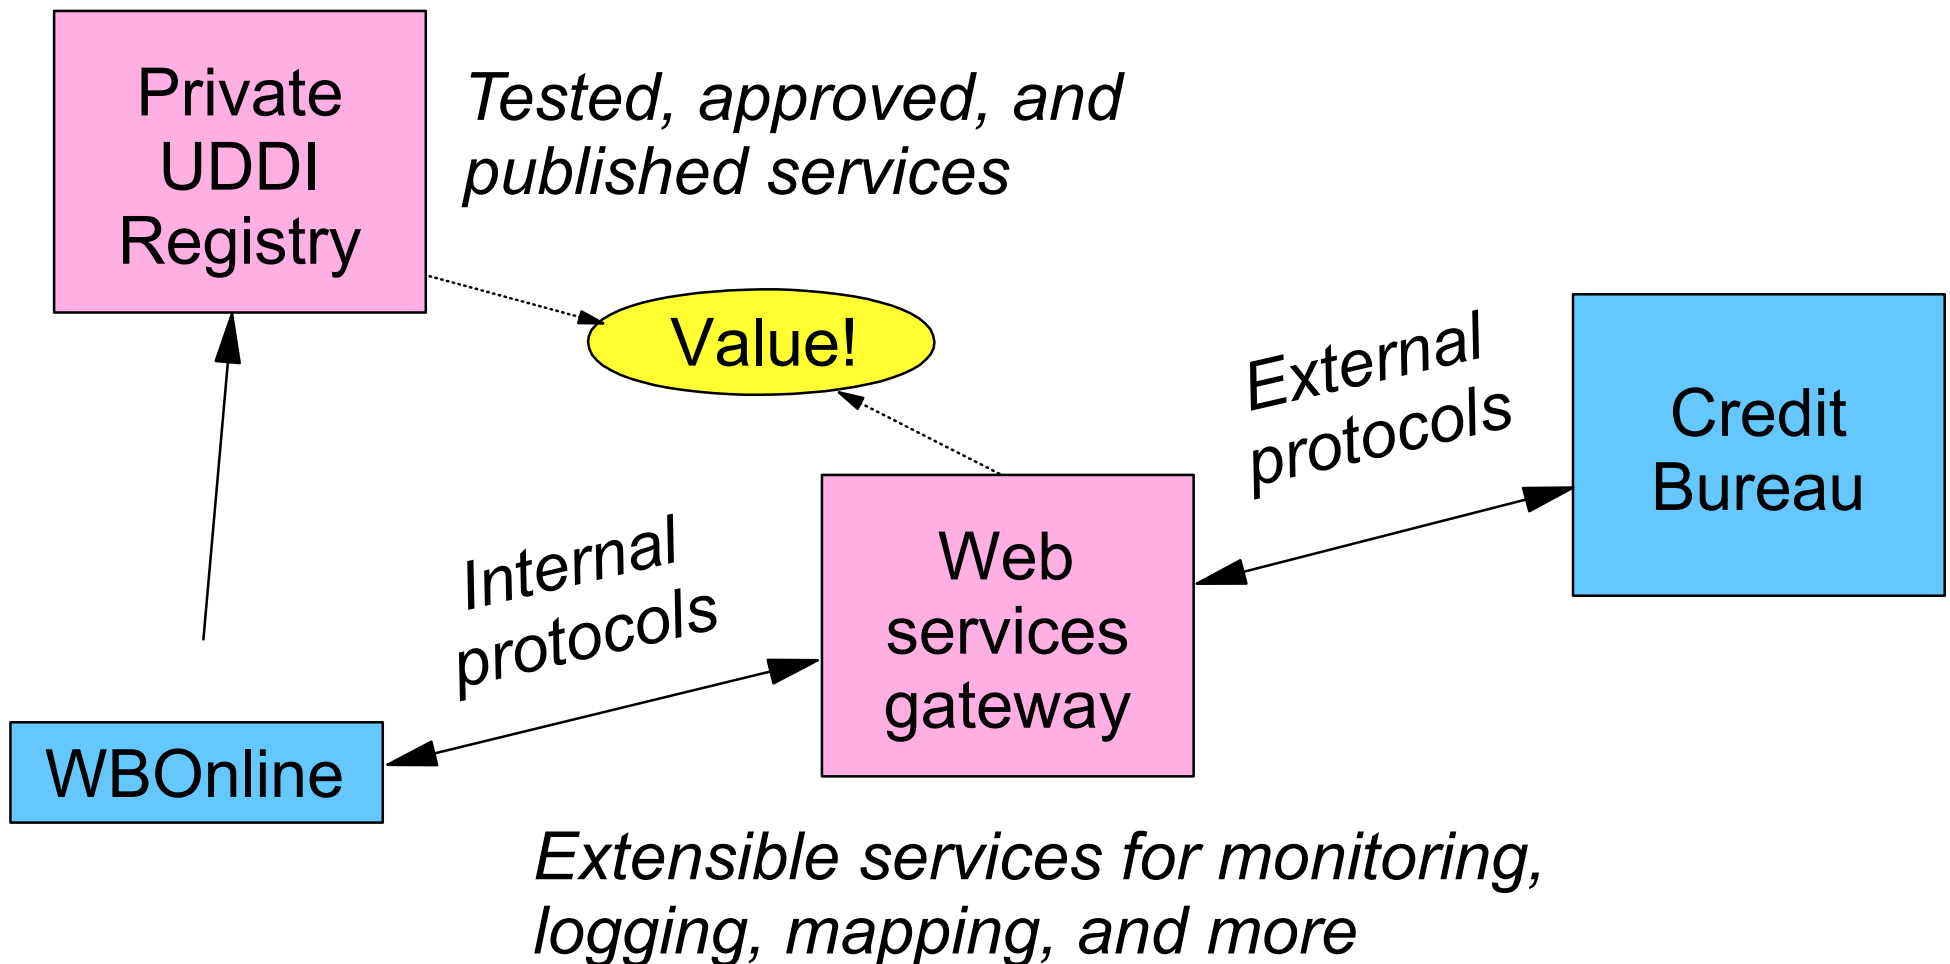

1. Explicit documentation of business practice decisions.
2. Clearer understanding of application behavior.
3. Reuse of policies across business processes.
4. Increased consistency of business practices.
5. Decreased maintenance and testing costs.
6. Improved manageability of business practice decisions.
7. Increased confidence in predicting the business impact of proposed changes.
8. Easy ability to identify and correct conflicting rules across the business.

# The "Next Level" of Web Services

3. *Determine the credit rating. If "positive", issue the card.*

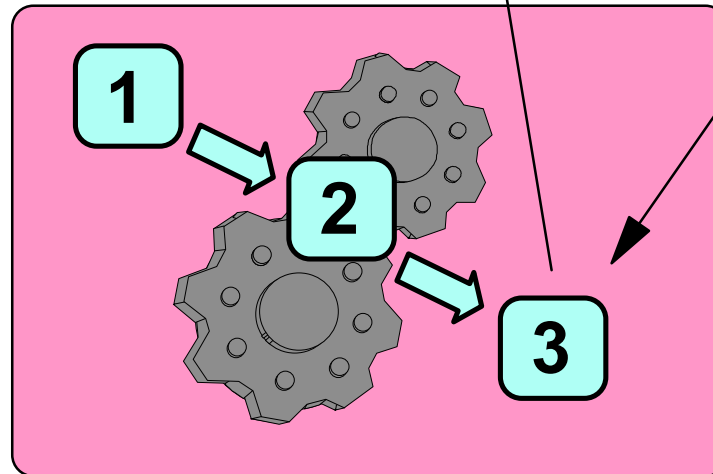

To satisfy this step, WBOOnline needs to invoke a Web service provided by a business partner (a Credit Bureau)...

# Service Choreography

*Automating flows  
between application  
components...*

# Additional Useful Extensions

- Advanced messaging!
- Advanced transactions!
- Advanced component models!

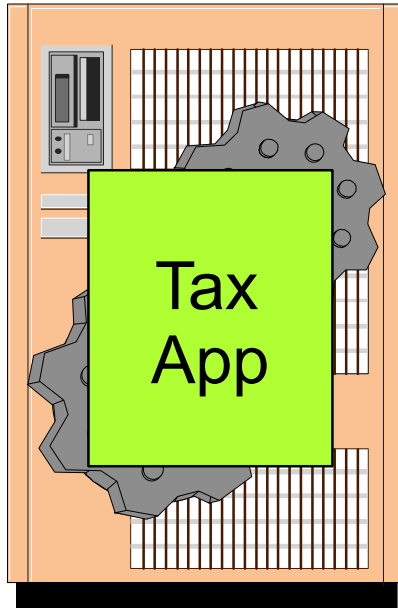

# Year-End Tax Update Application

We are still focused on

**Extensions**

- Background (or "batch") processing
- Parallel processing
- Asynchronous processing
- Deferred execution
- Scheduled execution

Unique Power of WebSphere Application Server!

# Travel Application

We are still focused on **Extensions**

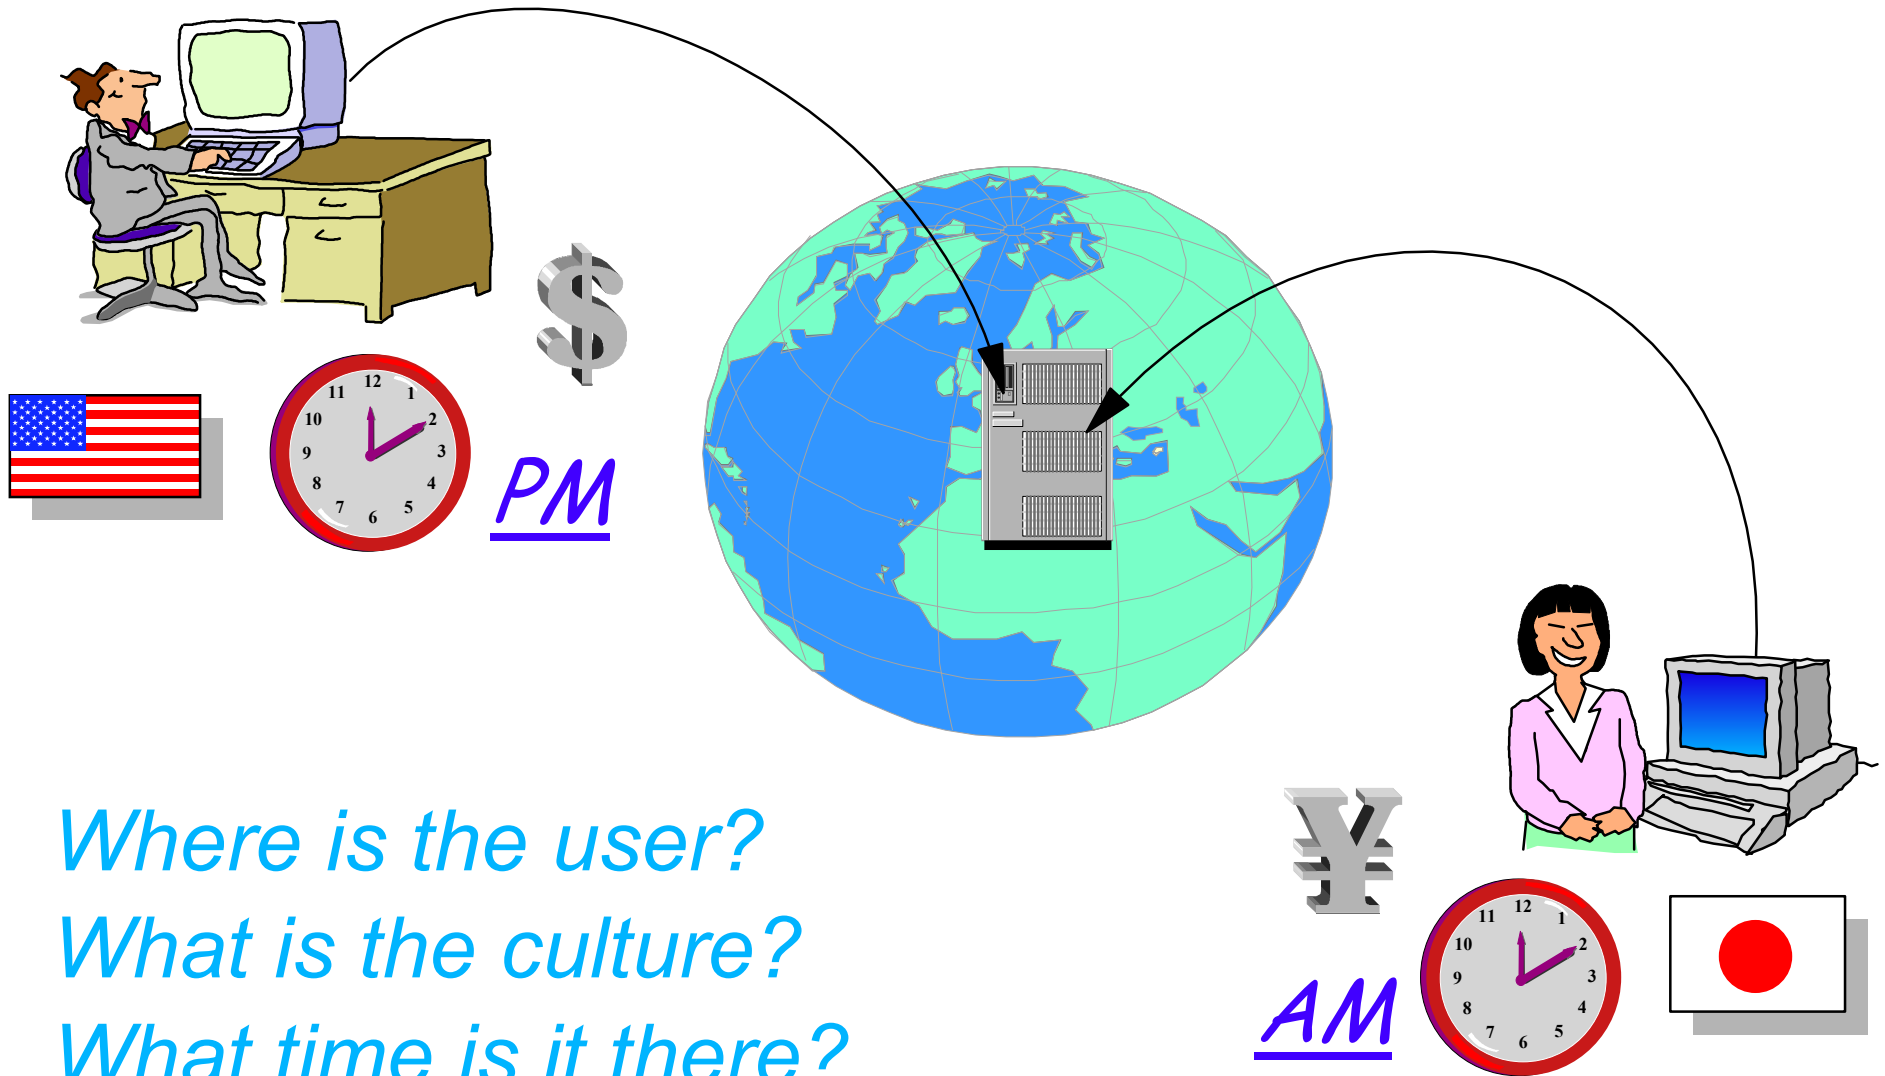

To define a typical "trip", we must do three things:

1. Book a hotel
  2. Book a car
  3. Book a flight
- WebSphere can automatically "undo" (or compensate) the first two steps if the last one fails!*

Note that the precise nature of compensation can be arbitrary...

# Internationalizing the Applications

# Other Valuable Extensions

Shared Work Areas: *Efficiently sharing arbitrary information (e.g., customer profiles) across a distributed application using "virtual scratch pads".*

ActiveX Bridge: *Invocation of EJBs from Microsoft clients and servers with high qualities of service.*

CORBA Integration: *Bi-directional communication between popular third-party ORBs and J2EE applications (with documented restrictions)*

CORBA C++ SDK: *Integrating C++ assets (both clients and servers) into J2EE environments using IBM's CORBA Software Development Kit.*

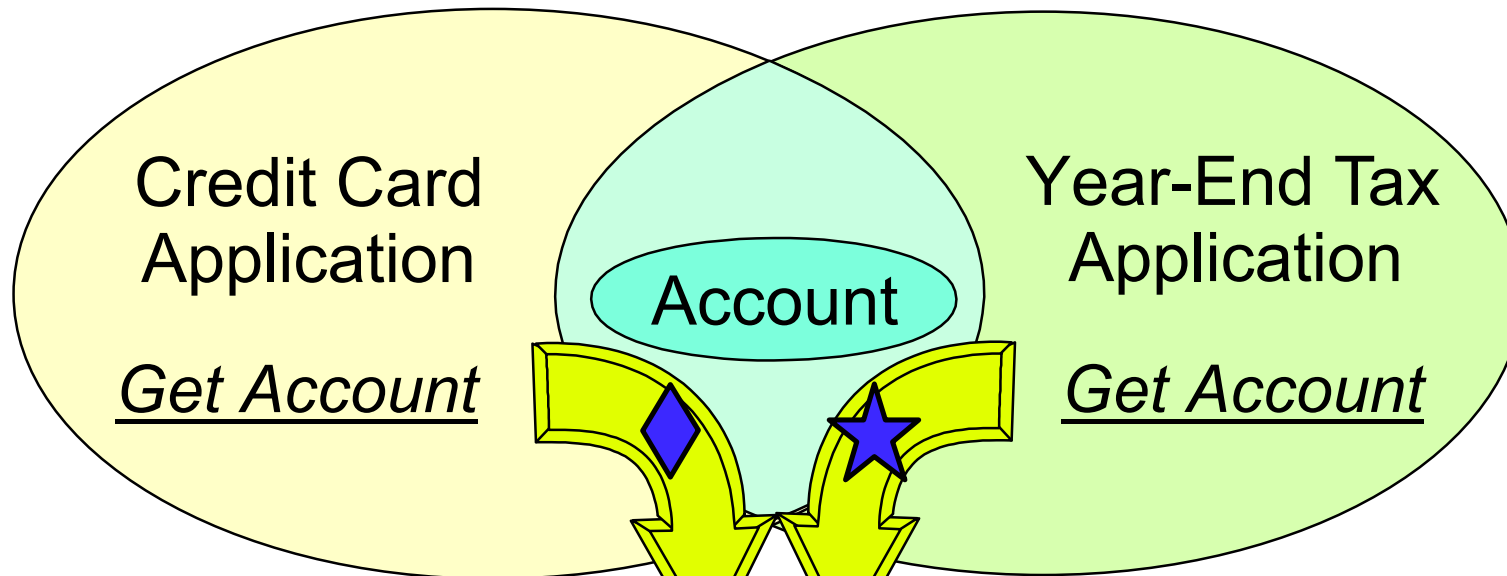

# WBOonline Application Optimizations

Apply real-time  
"read" application  
profile

*Administrator*

Apply batch  
"update" application  
profile

*Read only access  
to one account*

**Database**

*Access for update  
to many accounts*

# Other Optimizations\*

- Predefined database access
- Dynamic workload management
- Cross-domain failure bypass
- Pluggable infrastructure
- Flexible, self-enhancing infrastructure

*And we can optimize WBOonline at the "Edge"...*

- Intelligent load balancing
- Enhanced caching services
- Content distribution
- Policy-based quality of service
- Security services

\* Some of these are scheduled for later this year

# Raising the Optimizations Bar

- Requiring fewer resources
- Ensuring the integrity of data
- Transparently recovering from failures
- Continually running at near full capacity
- Managing unpredictable spikes in workload
- Guaranteeing user-specific service levels
- Leveraging proximity to data
- General performance and scaling

# Revisiting the Agenda

- The Evolving Role of Application Servers
- WebSphere Application Server Case Study
- WebSphere Foundation and Tool Offerings
- Next Steps

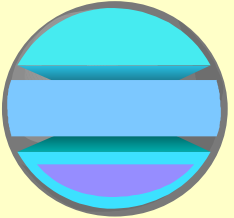

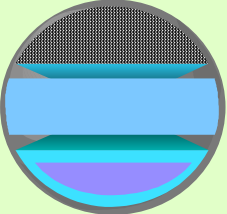

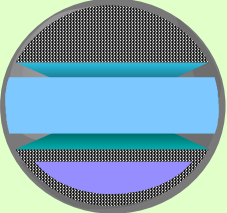

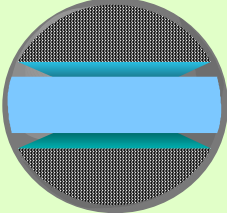

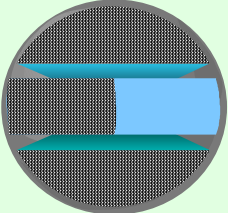

# WebSphere Application Server (WAS)

# Flexible Configurations

# WebSphere Studio

- Single, comprehensive IDE with unprecedented flexibility and extensibility supporting all roles in e-business development
- Complete application server support
- Extend with support for other IBM middleware and servers
- Extend with partner tools to provide complete life cycle support

# Flexible Configurations

*One IDE with multiple configurations that add functions and "perspectives" for specific developer roles*

# Different Integration Styles

# Some Reasons to Choose WebSphere

- **S**upport for complete solutions
- **U**nparalleled sustained investments
- **C**ore strengths and competencies
- **C**lear industry leadership
- **E**xcellent return on investment
- **S**upport for industry standards
- **S**cale and performance across platforms

WebSphere = Customer SUCCESS

# WAS Enterprise Testimonial

"In today's competitive world of financial services -- a world where more and more customer services and relationships are moving online -- ***a secure, robust e-business infrastructure is critical.*** We look to WebSphere to support our efforts to maintain a ***highly satisfied, loyal customer base*** -- and to do it more ***efficiently and cost effectively*** than our competitors. With the ***integration features,*** WebSphere helps us ***shorten time to market through faster application development,*** while ***reducing our ongoing maintenance costs.*** And, it ***integrates easily with our existing e-business applications,*** enabling us to ***leverage our prior IT investments.*** That ***boosts the return on our investment*** while enabling us to ***support thousands of users securely and reliably, day in and day out.***" --  
Thomas Leemann, Team Leader, WebSphere Application Server Engineering, UBS.

# Revisiting the Agenda

- The Evolving Role of Application Servers
- WebSphere Application Server Case Study
- WebSphere Foundation and Tool Offerings
- Next Steps

# WebSphere Services and Education

## Services

- Lab-based consultants with deep technical skills
- Provides skills transfer using best practices
- Mentoring and technical enablement
- Architecture, design, and custom coding
- Infrastructure and deployment services
- Migration assistance

Please see [www.ibm.com/websphere/developer/services](http://www.ibm.com/websphere/developer/services) for more details.

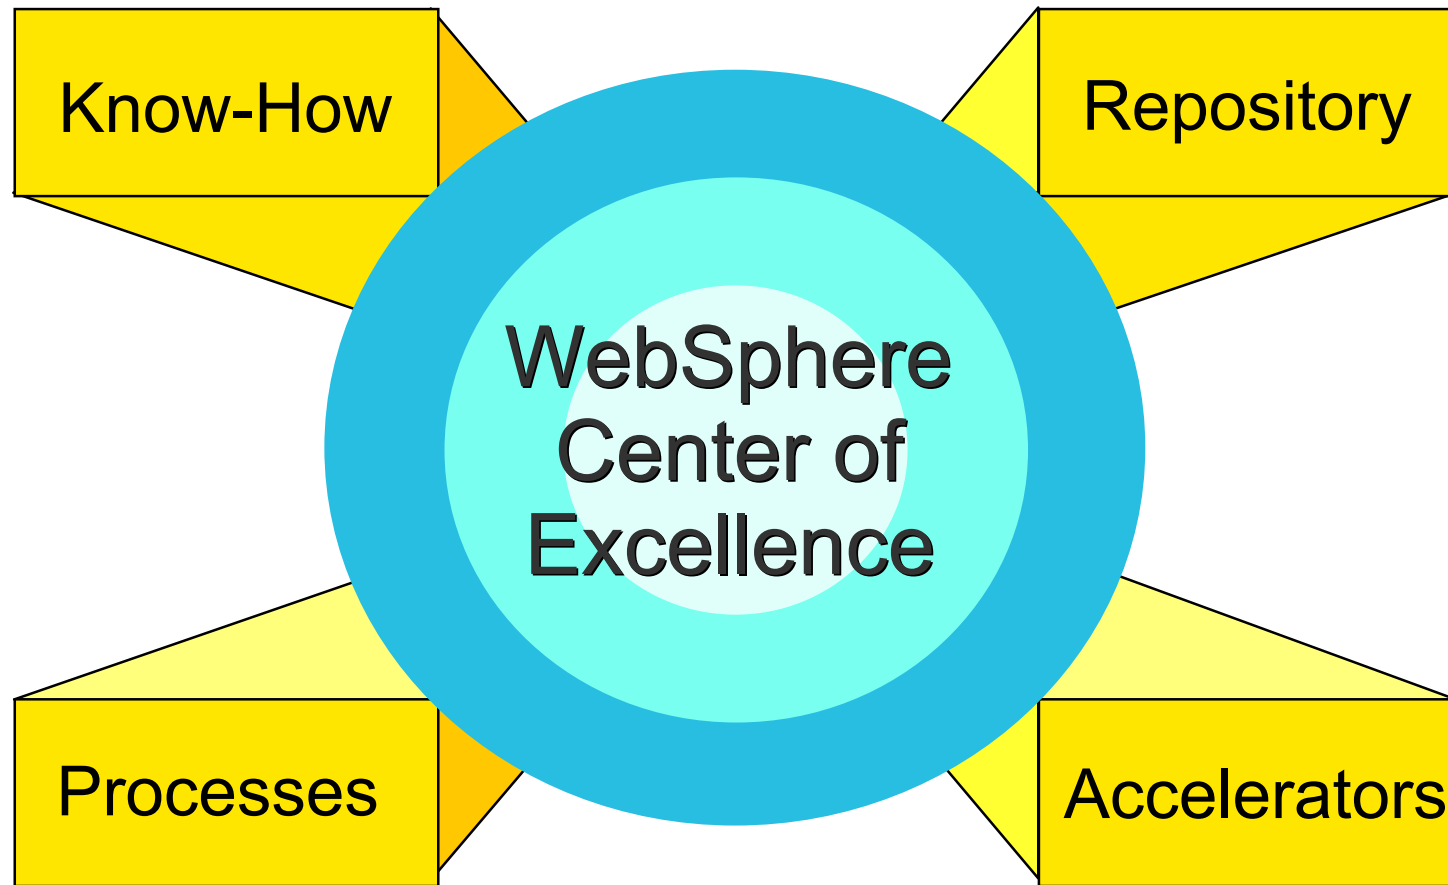

## Education

- Both public and private courses
- Roles-based and customized education
- Onsite or online training

Please see [www.ibm.com/services/learning/spotlight/ebusiness](http://www.ibm.com/services/learning/spotlight/ebusiness) for course roadmaps, course advisors, and sample training plans.

# Center of Excellence Services

*Flexible "Suites"*

-  Full Suite
-  Mini Suite
-  Overview Suite

*Value and  
depth of  
mentoring*

# Summary

- Comprehensive Build-to-Integrate Platform

- ▶ *Improve time-to-value by building new integration-ready applications which leverage existing software assets*

- Integrated Application Development

- ▶ *Maximize ROI and lower labor costs with superior developer productivity and the flexibility of a "portal-like" integration of best-of-breed tools*

- Intelligent, End-to-End Application QoS Optimization

- ▶ *Create competitive advantage and optimize price / performance while meeting the changing demands of dynamic e-business with industry leading reliability, scalability, performance and security*

- Agile Deployment and Administration

- ▶ *Lower cost of ownership and minimize startup investment with highly productive and flexible administration, deployment and management services*
