Notices

This information was developed for products and services offered in the U.S.A.

IBM may not offer the products, services, or features discussed in this document in other countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user's responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter described in this document. The furnishing of this document does not give you any license to these patents. You can send license inquiries, in writing, to:
IBM Director of Licensing, IBM Corporation, North Castle Drive, Armonk, NY 10504-1785 U.S.A.

The following paragraph does not apply to the United Kingdom or any other country where such provisions are inconsistent with local law: INTERNATIONAL BUSINESS MACHINES CORPORATION PROVIDES THIS PUBLICATION "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Some states do not allow disclaimer of express or implied warranties in certain transactions, therefore, this statement may not apply to you.

This information could include technical inaccuracies or typographical errors. Changes are periodically made to the information herein; these changes will be incorporated in new editions of the publication. IBM may make improvements and/or changes in the product(s) and/or the program(s) described in this publication at any time without notice.

Any references in this information to non-IBM Web sites are provided for convenience only and do not in any manner serve as an endorsement of those Web sites. The materials at those Web sites are not part of the materials for this IBM product and use of those Web sites is at your own risk.

IBM may use or distribute any of the information you supply in any way it believes appropriate without incurring any obligation to you.

Any performance data contained herein was determined in a controlled environment. Therefore, the results obtained in other operating environments may vary significantly. Some measurements may have been made on development-level systems and there is no guarantee that these measurements will be the same on generally available systems. Furthermore, some measurement may have been estimated through extrapolation. Actual results may vary. Users of this document should verify the applicable data for their specific environment.

Information concerning non-IBM products was obtained from the suppliers of those products, their published announcements or other publicly available sources. IBM has not tested those products and cannot confirm the accuracy of performance, compatibility or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

This information contains examples of data and reports used in daily business operations. To illustrate them as completely as possible, the examples include the names of individuals, companies, brands, and products. All of these names are fictitious and any similarity to the names and addresses used by an actual business enterprise is entirely coincidental.

COPYRIGHT LICENSE:

This information contains sample application programs in source language, which illustrate programming techniques on various operating platforms. You may copy, modify, and distribute these sample programs in any form without payment to IBM, for the purposes of developing, using, marketing or distributing application programs conforming to the application programming interface for the operating platform for which the sample programs are written. These examples have not been thoroughly tested under all conditions. IBM, therefore, cannot guarantee or imply reliability, serviceability, or function of these programs.

Trademarks

The following terms are trademarks of the International Business Machines Corporation in the United States, other countries, or both:

IBM has two registered trademarks for the branding of ITSO publications. These registered marks are for the text word "IBM Redbooks" and the Redbooks logo. In a nutshell, the term Redbooks must always be used in the plural form (for both text and logo) since IBM only owns the registered mark for the plural form. Usage must follow the guidelines below:

Using the term Redbooks in written text
 Redbooks are only to be referred to in the plural form, NEVER in the singular.
 For the initial reference (first occurrence), you must use "IBM Redbooks®" and include "IBM" as well as the ®. For instances thereafter you may use "Redbooks" without "IBM" preceding the word or ® following it.

Correct usage for written text:
 In this IBM Redbooks® publication we will explore.....(® symbol required for 1st usage)
 This Redbooks publication will show you.....(2nd usage or later - no ® or "IBM" needed)

Using the logo:

Redbooks (logo)

OTHER ITSO PUBLICATIONS - Marks not yet registered
 Trademark registration is a lengthy process and until we are officially registered, we cannot use the ® symbol. For those terms/logos in process, we will be using the ™ symbol. In contrast to the ® symbol (placed in the lower right hand corner), the ™ symbol is placed in the upper right hand corner. Please see examples below:

Redpaper ™
 Redpapers ™
 Redwiki ™
 Redwikis ™

The following terms are trademarks of other companies:
 Java and all Java-based trademarks are trademarks of Sun Microsystems, Inc. in the United States, other countries, or both.
 Microsoft, Windows, Windows NT, and the Windows logo are trademarks of Microsoft Corporation in the United States, other countries, or both.
 Intel, Intel logo, Intel Inside, Intel Inside logo, Intel Centrino, Intel Centrino logo, Celeron, Intel Xeon, Intel SpeedStep, Itanium, and Pentium are trademarks or registered trademarks of Intel Corporation or its subsidiaries in the United States and other countries.
 UNIX is a registered trademark of The Open Group in the United States and other countries.
 Linux is a trademark of Linus Torvalds in the United States, other countries, or both.
 Other company, product, or service names may be trademarks or service marks of others.

ibm.com/redbooks
International Technical Support Organization

What is Server Time Protocol (STP)?

- Provides capability for multiple servers to maintain time synchronization with each other and form a Coordinated Timing Network (CTN)
 - CTN: a collection of servers that are time synchronized to a time value called Coordinated Server Time (CST)
- Server-wide facility implemented in IBM System z9 EC, z9 BC, IBM eServer™ zSeries® 990 and 890 (z990, z890) Licensed Internal Code (LIC)
 - Single view of “time” to PR/SM™
 - PR/SM can virtualize this view of time to the individual partitions (LPARs)
 - STP not available on z900, z800 or 9672 Gx servers
- Message-based time synchronization protocol
 - Similar to Network Time Protocol (NTP) industry standard
 - Timekeeping information transmitted over Coupling Links
 - ISC-3 links (Peer mode), ICB-3 and ICB-4 links
 - **NOT standard NTP**

4

ibm.com/redbooks
International Technical Support Organization

STP key attributes

- Designed to provide improved time synchronization, compared to Sysplex Timer®, for servers in a Sysplex or non-Sysplex configuration
- Can scale with distance
 - Generally, servers exchanging data over fast short links require more stringent synchronization than servers exchanging data over long distances
- Supports a multi-site timing network of up to 100 km over fiber optic cabling
 - Allows a Parallel Sysplex® cluster to span up to 100 km
- Potentially reduces the cross-site connectivity required for a multi-site Parallel Sysplex cluster
 - Dedicated links not required to transmit timekeeping information
- With proper planning, allows concurrent migration from an existing External Time Reference (ETR) network
- Allows coexistence with ETR network

System z Hw Update

5

ibm.com/redbooks | International Technical Support Organization 

Key Attributes Continued ...

- Allows
 - Use of dial-out time services to initialize Coordinated Server Time (CST) to within +/- 100 ms of time provided by the external time source
 - NIST Automated Computer Time Service (ACTS)
 - NRC Canadian Time Service (CTS)
 - IEN Telephone Date Code (CTD)
 - Scheduling of periodic dial-outs to time services so that CST can be gradually steered to an international time standard (UTC)
 - Attachment to a NTP server (S.O.D.)
 - Statement of Directions made October 2006
 - Setting of local time parameters
 - Time zone offset
 - Daylight Saving Time (DST) offset
 - Leap Seconds offset
 - Automatic updates of DST offset based on time zone algorithm
 - Adjustment of CST up to +/- 60 seconds

* All statements regarding IBM's plans, directions, and intent are subject to change or withdrawal without notice. Any reliance on these Statements of General Direction is at the relying party's sole risk and will not create liability or obligation for IBM.

 System z Hw Update © 2007 IBM Corporation. All rights reserved. 6

ibm.com/redbooks | International Technical Support Organization 

Terminology

- STP-capable server/CF
 - z9 EC, z9 BC, z990, z890 server/CF with STP LIC installed
- STP-enabled server/CF
 - STP-capable server/CF with STP FC 1021 installed
 - STP panels at the HMC/SE can now be used
- STP-configured server/CF
 - STP-enabled server/CF with a CTN ID assigned
 - STP message exchanges can take place
- CTN
 - Collection of servers that are time synchronized to a time value called Coordinated Server Time (CST)
- CTN ID
 - Servers / Coupling Facilities (CFs) that make up a CTN are all configured with a common identifier CTN ID

 System z Hw Update © 2007 IBM Corporation. All rights reserved. 7

Terminology Continued ...

- Two types of CTN configurations possible:
 - Mixed CTN
 - Allows servers/CFs that are synchronized to a Sysplex Timer (ETR network) to coexist with servers/CFs that can be synchronized with CST in the “same” timing network
 - Sysplex Timer provides timekeeping information
 - CTN ID format
 - STP network ID concatenated with ETR network ID
 - STP-only CTN
 - All servers/CFs synchronized with CST
 - Sysplex Timer is NOT required
 - CTN ID format
 - STP network ID only (ETR network ID field has to be null)

Terminology Continued ...

- Sysplex Timer transmits timekeeping information to attached servers in a star pattern
- STP transmits timekeeping information in layers or Stratum:
- Stratum 1 (S1)
 - Highest level in the hierarchy of timing network that uses STP to synchronize to CST
- Stratum 2 (S2)
 - Server/Coupling Facility (CF) that uses STP messages to synchronize to Stratum 1
- Stratum 3 (S3)
 - Server/Coupling Facility (CF) that uses STP messages to synchronize to Stratum 2
- STP supports configurations up to S3

Time message will find a new path if needed

Mixed Coordinated Timing Network (CTN)

- Need at least one STP-enabled server to configure Mixed CTN
 - Selected STP-enabled server **MUST** also be synchronized to the Sysplex Timer
 - Automatically becomes a Stratum 1 server for the Mixed CTN
 - Stratum 2 server/CF uses Stratum 1 as clock source
 - Stratum 3 server/CF uses Stratum 2 as clock source
- Sysplex Timer provides timekeeping information for Mixed CTN
- Sysplex Timer console continues to be used for all timing related functions of the Mixed CTN
 - Initialize time; Set Time Zone, Daylight Saving Time (DST), Leap seconds offsets
 - Schedule DST and Leap seconds offset changes
 - Adjust time up to +/- 4.999 seconds
- Hardware Management Console (HMC) must be used for Mixed CTN ID initialization and modification

Mixed CTN Continued ...

- Mixed CTN allows:
 - Concurrent migration from ETR network (with proper planning)
 - Concurrently migrate from existing ETR network to Mixed CTN
 - Concurrently migrate from Mixed CTN to ETR Network
 - Allows testing Mixed CTN during change window and go back concurrently to ETR network at start of production
 - Coexistence in the “same” timing network of
 - Servers/CFs that can only be synchronized to a Sysplex Timer (ETR network) and
 - Servers/CFs that can be synchronized with CST
 - In a Parallel Sysplex configuration, the only non STP-capable server and CF that can coexist are the z900 and z800 server and CF
 - Non STP-capable Server/CF **MUST** support Message Time Ordering Facility (MTOF)
 - Non STP-capable server/CF **MUST** be attached to Sysplex Timer

ibm.com/redbooks | International Technical Support Organization **IBM**

Example: Coexistence with non STP-capable server

- z9 BC, z990(1), z900 synchronized to Sysplex Timer
- z9 BC, z990(1) are Stratum 1 servers
 - Two Stratum 1 servers recommended to avoid single point of failure
- z990(2) synchronized to either z9 BC or z990(1) via STP is a Stratum 2 server
 - z990(2) does not need ETR link connections
 - z990(2) can be located up to 100 km away from z9 BC, z990(1)

Redbooks Workshop | System z Hw Update | © 2007 IBM Corporation. All rights reserved. | 12

ibm.com/redbooks | International Technical Support Organization **IBM**

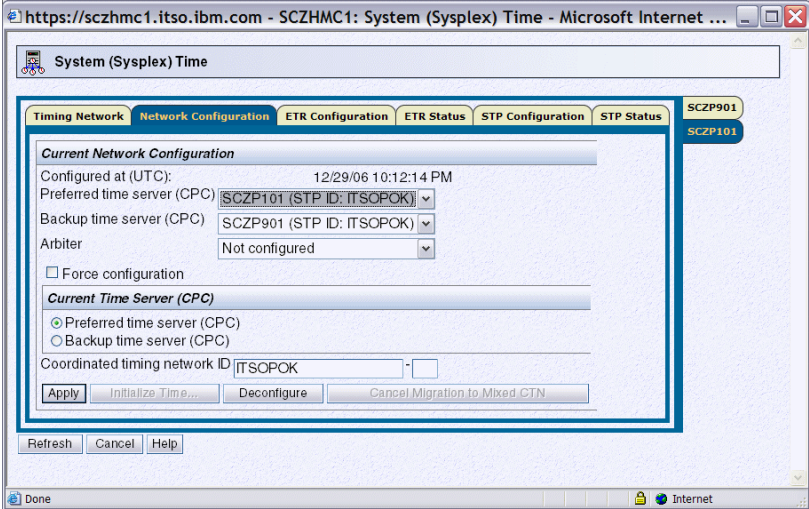

STP-only CTN

- All servers in STP-only CTN have to be STP capable
 - 9037s no longer required
- Server roles
 - Preferred Time Server (PTS)
 - Server that is preferred to be the “active” Stratum 1 server
 - Backup Time Server (BTS)
 - Role is to take over as the Stratum 1 under planned or unplanned outages, without disrupting synchronization capability of STP-only CTN
 - Current Time Server (CTS)
 - “Active” Stratum 1 server
 - Only one “active” S1 allowed
 - Only the PTS or BTS can be assigned as the CTS
 - Normally the PTS is assigned the role of CTS
 - Arbiter
 - Provides additional means to determine if BTS should take over as the CTS

Redbooks Workshop | System z Hw Update | © 2007 IBM Corporation. All rights reserved. | 13

ibm.com/redbooks | International Technical Support Organization 

STP-only CTN Roles

Redbooks Workshop  System z Hw Update © 2007 IBM Corporation. All rights reserved. 14

ibm.com/redbooks | International Technical Support Organization 

STP-only CTN Continued ...

- HMC must be used to provide the following functions:
 - Initialize Coordinated Server Time (CST) manually
 - Initialize CST to an international time standard (UTC)
 - Dial-out from HMC to set CST to within +/- 100 ms of ETS
 - Schedule periodic dial outs to maintain accurate time
 - Set Time Zone Offset, Daylight Saving Time Offset, Leap seconds Offset
 - Schedule and change Offsets (Daylight Saving, Leap seconds)
 - Automatic scheduling of Daylight Savings Time based on algorithm
 - Adjust time by up to +/- 60 seconds (currently 9037 allows 4.999 seconds)
 - Define, modify, view the STP-only CTN ID
- Concurrent migration (with proper planning)
 - Concurrently migrate from Mixed CTN to STP-only CTN or
 - Concurrently migrate from existing ETR network to STP-only CTN
 - Concurrently migrate from STP-only CTN to Mixed CTN
 - Allows testing STP-only CTN during change window and go back concurrently to Mixed CTN or ETR network at start of production.

CTN ID

- Coordinated Timing Network ID
- The CTN ID is an identifier that is used to indicate whether the server has been configured to be part of a CTN. It identifies the CTN. The CTN ID is made up of two fields:
 - A field that defines the STP Network ID.
 - Eight characters (A-Z, a-z, 0-9, '.', and '_')
 - A field that defines the ETR Network ID.
 - 00-31

ibm.com/redbooks | International Technical Support Organization | IBM

Example of STP-only CTN

- Configuration has to be defined
 - Must assign PTS and CTS
 - Optionally assign BTS
 - Strongly recommended to allow near-continuous availability
 - Optionally assign Arbitrator
 - Recommended for configurations of 3 or more servers/CFs
 - Can improve recovery

STP can use existing Coupling links

Redbooks Workshop | System z Hw Update | © 2007 IBM Corporation. All rights reserved. | 18

ibm.com/redbooks | International Technical Support Organization | IBM

Network Time Protocol (NTP) client support – S.O.D.

- IBM intends to enhance the STP design to provide Network Time Protocol (NTP) client capability, so that Coordinated Server Time may be initialized and maintained to time provided by an NTP server.
 - The purpose of this function is to allow the same time across an enterprise comprised of heterogeneous platforms.
- Simple Network Time Protocol (SNTP) client support added to Support Element (SE) code of z9 to interface to Network Time Protocol (NTP) servers
 - Not available on z990 and z890 servers
- NTP server becomes the single time source (External Time Source (ETS)) for IBM System z servers, as well as other servers that have NTP clients (Unix, NT, etc)
 - NTP servers can be V3, V4, or SNTP
 - IPv4 support
 - Not available on z990 and z890 servers
- Time reference for NTP server can be GPS, dial-out, DCF-77, etc
- NTP servers have various options for stable oscillators used in case of loss of GPS or other input signal
 - Temperature Compensated (TCXO) – 21 milliseconds per day drift (typical)
 - Oven Compensated (OCXO) – 1 millisecond per day drift (typical)
 - Rubidium – 6 microseconds per day drift (typical)

* All statements regarding IBM's plans, directions, and intent are subject to change or withdrawal without notice. Any reliance on these Statements of General Direction is at the relying party's sole risk and will not create liability or obligation for IBM.

Redbooks Workshop | System z Hw Update | © 2007 IBM Corporation. All rights reserved. | 19

ibm.com/redbooks International Technical Support Organization **IBM**

NTP Client Support – S.O.D. (Continued ...)

Configured NTP Time Server	Stratum	Dispersion (microseconds)	Source	Status
ntp1.itso.ibm.com	2	30503	209.51.161.238	Success
9.56.192.87	1	760	GPS	Success

- Only the STP facility in the Current Time Server (active Stratum 1) makes time adjustments
- NTP server can be defined to multiple servers in Coordinated Timing Network (CTN)
 - For redundancy it is recommended to configure NTP server for the Backup Time Server (BTS)
- Accuracy to External Time Source (ETS)
 - + / - 100 milliseconds

* All statements regarding IBM's plans, directions, and intent are subject to change or withdrawal without notice. Any reliance on these Statements of General Direction is at the relying party's sole risk and will not create liability or obligation for IBM.

Redundant NTP Server example using Internet NTP Servers – S.O.D.

The diagram illustrates a redundant NTP server setup. On the left, a 'Coordinated Timing Network' (CTN) is shown, enclosed in a blue dashed oval. It consists of an Ethernet Switch connected to a System z HMC and two SNTP clients. This CTN is connected to an NTP server (Unix, Linux) Stratum 2, which in turn connects to an NTP server(s) Stratum 1. The Stratum 1 server is connected to a Corporate network, which links to the Internet. The Internet contains Internet NTP Servers (NTP Project). A Remote HMC (Browser) and an IBM Support Center (RSF) are also shown connected to the Internet. A green starburst labeled 'S.O.D.' is located in the bottom right of the diagram area.

* All statements regarding IBM's plans, directions, and intent are subject to change or withdrawal without notice. Any reliance on these Statements of General Direction is at the relying party's sole risk and will not create liability or obligation for IBM.

ibm.com/redbooks International Technical Support Organization **IBM**

Timing-only Links

The diagram shows four System z processors labeled P1, P2, P3, and P4. P1 is a z990(1), S1 (PTS) processor. P2 is a z9 EC, S2 (BTS) processor. P3 is a z990(2) processor. P4 is a z9 BC, S2 (Arbiter) processor. P1 and P2 are connected to P3 and P4. Two pink boxes labeled 'Timing-only Links' are shown at the bottom, with arrows pointing to the connections between P3 and P4.

- Coupling links that allow two servers to be synchronized when a CF does not exist at either end of link
 - Typically required when synchronization needed not in a Parallel Sysplex configuration (for example XRC)
- HCD enhanced to define Timing-only links
- Can be defined in either Mixed CTN or STP-only CTN
- Timing-only links used to transmit STP messages only

Redbooks Workshop System z Hw Update © 2007 IBM Corporation. All rights reserved. 23

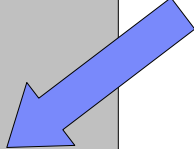

ibm.com/redbooks | International Technical Support Organization 

Timing-only Links

- Permits Server-to-Server CF links when no CF is defined at either end of the definition.
 - CNTLUNIT=STP (no devices)
- May require the purchase of additional CF Links
- APARs – For z/OS 1.7 and z/VM 5.2

International Technical Support Organization

Prerequisites

- Hardware
 - 9037-002 concurrent LIC upgrade (if migrating from ETR network)
 - 9037 code changes to support STP Mixed CTN
 - 9037 LIC version 3.0 (concurrent)
 - System z9 server must be at EC Driver level 67L
 - Concurrently install all of the latest MCLs for this driver
 - STP prerequisite MCLs (LIC) will be installed
 - z990 and z890 must be at EC Driver level 55K
 - Concurrently install all of the latest MCLs for this driver
 - STP prerequisite MCLs (LIC) will be installed
 - HMC v2.9.1 (EC Driver level 63) or higher
 - Can upgrade z890/z990 HMC to new HMC code level
 - Concurrently install STP Enablement MCL (FC 1021)
 - For NTP Client support function (optional)
 - NTP server at NTP v3 or v4 or SNTP with IPv4 support
 - z9 Requires HMC version 2.9.2 and SE Driver 67 or higher

* All statements regarding IBM's plans, directions, and intent are subject to change or withdrawal without notice. Any reliance on these Statements of General Direction is at the relying party's sole risk and will not create liability or obligation for IBM.

Prerequisites Continued ...

- Software
 - z/OS 1.7 or higher
 - Additional software maintenance required for z/OS 1.7, 1.8 and 1.9
 - Includes STP enablement APAR
 - Maintenance can be applied using "rolling IPL" process
 - Check Preventive Service Planning (PSP) buckets
 - Listed in the 2084DEVICE, 2086DEVICE, 2094DEVICE and 2096DEVICE PSP buckets for the z990, z890, z9 EC and z9 BC respectively
 - To simplify identification of PTFs for STP, functional PSP bucket created
 - Use the Enhanced Preventive Service Planning Tool (EPSPT)
 - www14.software.ibm.com/webapp/set2/psp/srchBroker
 - Coexistence with z/OS 1.4 through z/OS 1.6
 - Mixed CTN can include pre-1.7 systems
 - PTFs required for toleration code
 - z/OS 1.6 EOS 9/07

* All statements regarding IBM's plans, directions, and intent are subject to change or withdrawal without notice. Any reliance on these Statements of General Direction is at the relying party's sole risk and will not create liability or obligation for IBM.

Summary

- **Server Time Protocol:**
 - Allows Parallel Sysplex distances to extend beyond the current 40 km limit
 - Limits set by coupling protocol and links
 - Can help meet more stringent time synchronization requirements
 - Expected to Scale with technology as processors and messaging technology improve
 - Does not require dedicated Timer links
 - Uses same hardware and protocols as data
 - Allows concurrent migration from an ETR network with proper planning
 - Allows coexistence with ETR network
 - Allows time to be set to a dialup service to within 100 ms of UTC
