Modern Application Architectures for CICS COBOL Developers

Attend one of our complimentary half-day seminars and learn how you can develop SOA applications by leveraging COBOL and your existing application development skills

The future of COBOL is here today – alive and well – and quickly becoming a key business language in modern Service Oriented Architectures (SOAs). These application architectures enable organizations to extend their infrastructures by leveraging modern interfaces via Web browsers, modern process assembly techniques via Web services, and high QOS business processing – in WebSphere® and CICS®.

Learn how the processing of modern, customer-facing applications are delivered in WebSphere, and how those processes can integrate with and leverage COBOL and CICS. The result is more asset reuse, easier management and faster development and deployment.

IBM is hosting a series of live, half-day seminars in several cities across in North America that are designed for technical professionals, including application development management, and COBOL and CICS application developers, systems programmers and IT managers.
These seminars give attendees a unique opportunity to interact with technical professionals who have in-depth knowledge of CICS and COBOL, especially as they relate to SOA. Attendees also get a first-hand view of the tools that can help you succeed.

In this full-day seminar, **Modern Application Architectures for CICS COBOL Developers,** you'll learn how to:

- *Quickly generate advanced user interfaces for core applications*
- *Use the mainframe's application resource sharing to streamline management of workloads at peak times*
- *Leverage current developer skills to enable reuse existing processing while enhancing the value of new deliverables*
- *Speed application development by standardizing on processes and tooling*
