

I am Dino Quintero. I am the IBM Marketing Manager for the Blue Gene Solution. This is my first Super Computing Event. I am very happy to introduce to the customers our new Solution IBM Blue Gene P. The fastest, ultra scalable supercomputing system, and keeping in mind energy efficiency and very easy to program. This is a very good solution for customers looking to extend their repertoire to achieve ultra scalability. IBM is here present with multiple solutions, and I am very happy to introduce to the community the latest on Blue Gene, Blue Gene P.

At this event we are demonstrating, we have 3 different pedestals. There is a pedestal with the hardware Blue Gene solution, one pedestal showcasing our different applications that are part of the portfolio of solutions we are providing; one pedestal demonstrating Super Growth simulation on the Blue Gene System. Besides that we have a variety of theater presentations highlighting customers such as Argonne National Labs, Blue Brain project, RPI with their system of Nano Technology and innovations, are among some of the theater presentations that we are showing here at the Innovations Theater with IBM.
