

Format for file used to import ARE console data:

Use commas or semicolons for the delimiter between each field in the table. Use colons for the delimiter between multiple template names. Whitespace is allowed.

Example with two templates and a description using commas:

```
systemName,userName,password,Template1:Template2,description
```

Example with only one template using semicolons:

```
systemName;userName;password;Template1;description
```

Example with no description using commas:

```
systemName,userName,password,Template1
```
