

Power Systems Virtualisation from IBM - Technical Webinar User Group

IBM
© 2013 IBM

Today

27th → Shared Storage Pools - Phase 3 Starting at 10:00 am UK time by Nigel Griffiths

Smart Meeting → Put questions into the Chat box
or AT&T Toll Free phone for better audio

- 0800-368-0638 = UK Toll Free
- 0203-059-6451 = UK but you pay for the call
- Then 6403785# Participant Code
- Other countries see chat box for the website
- Please Mute with *6

Previous Sessions:

Electric Server Agent
RDX Removable disks
Dynamic Platform Optimiser
PowerSC
POWER Advisors
POWER7 Affinity and Perf.
Updating Power, I/O & HMC
VPM for IBM i
ISD VMControl
- Capture & Deploy

Future Sessions → <http://tinyurl.com/newUK-PowerVM-VUG>

- July 31st: Whole POWER Machine Monitoring

Shared Storage Pool 4

VIO Shared Storage Pool phase 3

- **New function delivered with VIOS 2.2.2.1 now 2.2.2.2 fix**
- **Please read the Readme notes:**
- <http://www.ibm.com/support/docview.wss?uid=hpc1vios117f5701>
- <http://www.ibm.com/support/docview.wss?uid=hpc1vios610c6192>

- **Then read VIOS 2.2.2 User Guide**
- <http://publib.boulder.ibm.com/infocenter/powersys/v3r1m5/topic/p7hb1/p7hb1.pdf>

5 of 47 in 95+

Shared Storage Pool phase 3 Requirements

1 of 3

Read the Readme Notes

- Platforms: **POWER6 & POWER7** only (includes **Blades**)
- VIOS Storage Pool (minimums):
 - Direct fibre-channel attached LUNs:
 - **1 for repository ~10 GB (NEW INFO: 1GB is enough) &**
 - **1 or more for data, 10 GB → in practice lots more [like 1TB+]**
- Pool Storage Redundancy: Repository & pool storage must be **RAIDed**
- VIOS **name resolution** to resolve hostnames
- Virtual I/O Server(s):
 - **Minimum CPU: Entitlement=1+, VP=1+** (shared, uncapped is OK)
 - **Minimum Memory: 4+ GB** (no skinny VIOS)

Shared Storage Pool 3

Shared Storage Pool phase 3 Restrictions 3 of 3

Network

- Reliable & not congested
- DNS should use local /etc/hosts first
- Forward & reverse lookup must work
- Recommended to synchronise clocks

- SEA must use default threaded mode

Storage

- Can't resize a LUN
- SSP may take more CPU
- No SCSI reservations (Reserve/Release)
- HA SAN solutions used to mitigate outages
- SANCOM not supported

- Don't use vSCSI adapter "Any client partition can connect"
- AMS or Suspend/Resume can't use SSP for Paging Space

Lots of restrictions were dropped for this release

10 of 47 in 95+

Cluster create on 1st node

Create cluster on one VIOS (here called bluevios1)

```
$ cluster -create -clustername galaxy \  
-repopvs hdisk2 \  
-spname atlantic -sppvs hdisk3 hdisk5 \  
-hostname bluevios1.ibm.com
```

...
Cluster galaxy has been created successfully.

It will take a minute or two, then output Cluster created
You will find a bunch of new daemons running.

If it complains the disks are "in use" check.
If certain they are correct, wipe the disk content with:

```
# cleandisk -r hdiskX  
# cleandisk -s hdiskX
```

It may ask you to confirm y/n ?

11 of 47 in 95+

Reminder

Then on that 1st node - add other nodes

On the first VIOS running the cluster

```
$ cluster -addnode -clustername galaxy \  
-hostname redvios1.ibm.com
```

Partition redvios1.aixncc.uk.ibm.com has been added to the galaxy cluster
\$

Add other node(s) as necessary.

12 of 47 in 95+

Reminder

Allocate disk space & assign to client VM

```
$ mkbdsp -clustername galaxy \  
-sp atlantic 16G -bd vdisk_diamond6a \  
-vadapter vhost2
```

```
Logical Unit vdisk_diamond6a has been created with udid:  
615af85de5acad39a8827e9cd01d6b36.  
Assigning file "vdisk_diamond6a" as a backing device.  
Vtscsi3 Available.  
$
```

Notes:

- 16 GB is not actually allocated until written too
- vdisk_diamond6a is just a name = reminder of the VM using it
- vhost2 is the virtual SCSI adapter for client VM diamond6

13 of 47 in 95+

IBM
© 2013 IBM
13
Shared Storage Pool 3
Reminder

Skipping SSP phase 2 ...

- Cluster command for details of the VIOSs
- Setting up Dual VIOS multiple pathing to SSP
- Add a new LUN to grow the pool
- Replace a LUN also allows migration

- Thin Provisioning of disk space at 64 MB chunk
 - Optional regular provisioning with -thick ☺
- Alerting on Pool Space getting LOW !!
 - There is a new Alert for extreme Over-Commit level
- Snapshots
 - Learnt a rollback to earlier snapshot removes later ones

14 of 47 in 95+

Shared Storage Pool 3
Reminder

Monitoring Disk use with lssp – SSP3

```
$ lssp -clustername stars -sp atlantic -bd
Lu Name      Size(mb) ProvisionType %Used Unused(mb) Lu Udid
orange7a    32768    THIN           9% 29615    7d58538152 ...
orange7b    32768    THIN           0% 32770    76136907aa ...
```

```
$ lssp -clustername stars
POOL_NAME:      atlantic
POOL_SIZE:      130944
FREE_SPACE:     125514
TOTAL_LU_SIZE:  65536
OVERCOMMIT_SIZE: 0
TOTAL_LUS:      2
POOL_TYPE:      CLPOOL
POOL_ID:        000000009893E510000000050740962
```

See who is using most disk
& who might run out

Monitoring Disk use with lssp – SSP3

```
$ lssp -clustername stars -sp atlantic -bd
Lu Name      Size(mb) ProvisionType %Used Unused(mb) Lu Udid
orange7a    32768    THIN           9% 29615    7d58538152 ...
orange7b    32768    THIN           0% 32770    76136907aa ...
```

```
$ lssp -clustername stars
POOL_NAME:      atlantic
POOL_SIZE:      130944
FREE_SPACE:     125514
TOTAL_LU_SIZE:  65536
OVERCOMMIT_SIZE: 0
TOTAL_LUS:      2
POOL_TYPE:      CLPOOL
POOL_ID:        000000009893E510000000050740962
```

See who is using most disk
& who might run out

Over-commit
Good to know the "worst case"

Four User Interface

- VIOS Command Line (CLI)
 - Already shown in this presentation by example
 - Some feature make sense via CLI → like: cluster –create/-addnode
- VIOS cfgassist menu
 - This is the VIOS version of smitty
 - Menu driven interface for CLI
 - Fully covers SSP functions
- HMC Graphical User Interface (HMC 7.7.4+)
 - SSP virtual disk list, create and connect to your VMs
 - Note: don't have any VIOS vSCSI slots in "Any node" = bad practice anyway
 - See screen shots ...
- System Director – **New in SSP3**
 - Already has Storage Pools concept and features
 - SSP is just another storage pool type
 - Then may adds new unique items – like VMControl appliance deploy to SSP disk space or Linked-Cloning

Reminder

New

17 of 47 in 95+

Hardware Management Console

- HMC from October 2011
 - For SSP support & LPM of SSP LPARs
 - Addition feature to Virtual Storage Management

- Shipped with HMC upgrade V7 R7.4 SP0+
 - Not part of the VIOS package

18 of 47 in 95+

HMC

Properties: 3.3, 0.125
 Operations: 2.4, 7.25
 Connections: 9

Virtual Storage Management - diamond-8233-E8B-SN100271P
 Use virtual storage management tasks to manage virtual storage for your VIOS virtual servers and your Shared Storage Pool (SSP) Devices. Select a VIOS virtual server or an SSP Device to query.

VIOS/SSP: Query

SSP Pool

Create Virtual Disk - diamond-8233-E8B-SN100271P
 To create a virtual disk, enter a name and a size for the new disk. You also select a storage pool from which to create the new disk. You also select the new disk to a logical partition. This task can take several minutes to complete if you are creating a virtual disk in a file-based storage pool.

Virtual disk name:
 Storage pool name: atlantic(galaxy) (46.6 GB free, 51.62 GB total)
 Virtual disk size: GB
 Assigned partition: diamond8-AIX7 TL1 beta(8)
 Disk type: Thick
 Map to VIOS(s): Select Virtual IO Server
 diamondvios1-SSP

Virtual Disks

Select	Name	Storage Pool	Assigned Partition	Size	Disk Type
<input type="radio"/>	vdisk_diamond5a	atlantic	diamond5-AIX7-SSP2(5)	16 GB	Thin
<input type="radio"/>	vdisk_diamond6a	atlantic	diamond6-AIX7-SSP2(3)	16 GB	Thin

19 of 47 in 95+

HMC

Virtual Storage Management - diamond-8233-E8B-SN100271P
 Use virtual storage management tasks to manage virtual storage for your VIOS virtual servers and your Shared Storage Pool (SSP) Devices. Select a VIOS virtual server or an SSP Device to query.

VIOS/SSP: Query

Storage Details

Virtual Disks | Storage Pools | Physical Volumes | Optical Devices | Virtual Fibre Channel

Virtual disks are logical entities on the VIOS partition that provide storage for client applications. To perform management tasks for existing virtual disks, select a virtual disk then select the task to perform. You also can create a new virtual disk.

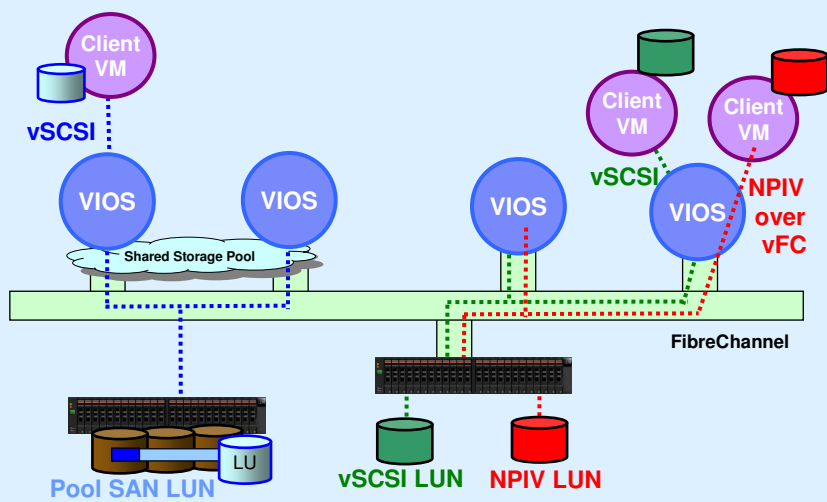

--- Select Action ---

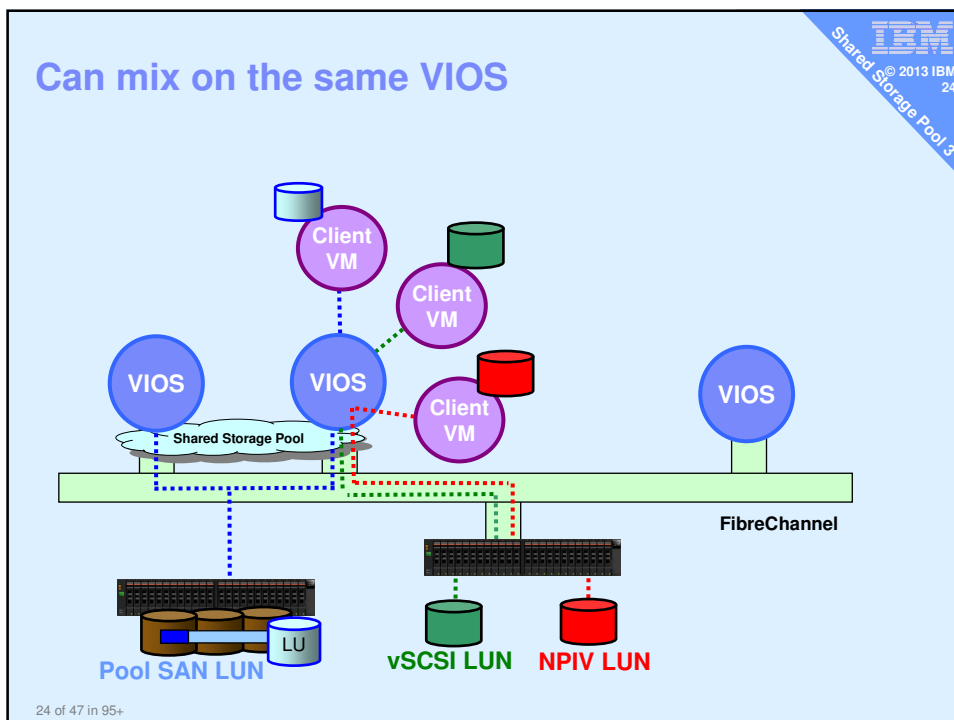

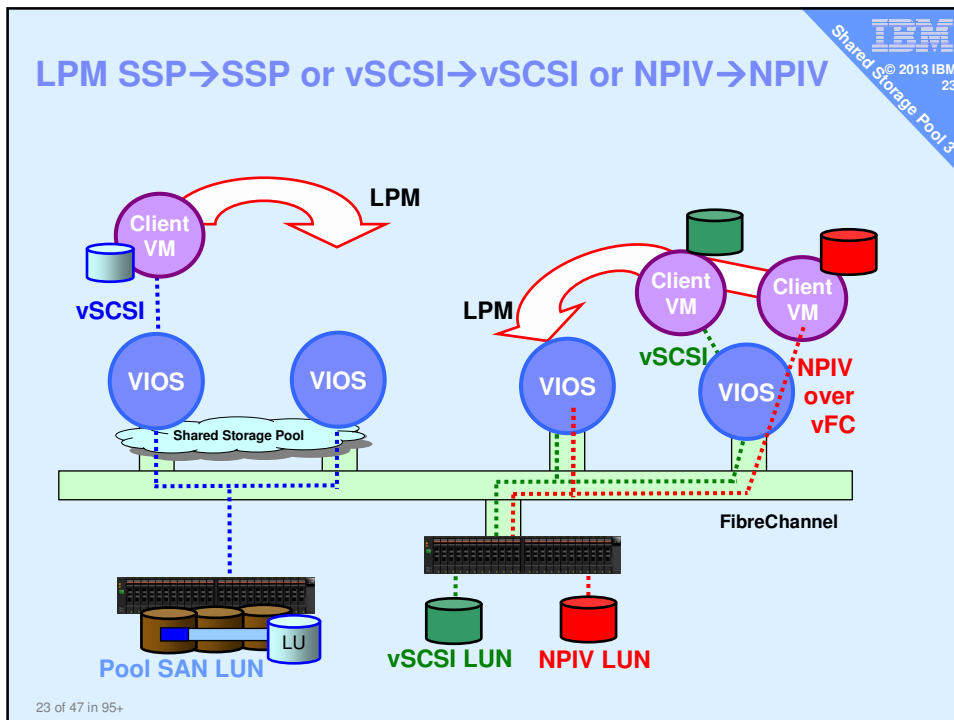

Select	Name	Storage Pool	Assigned Partition	Size
<input type="radio"/>	clientvg	None		25 GB
<input type="radio"/>	clientvg	None		256 MB
<input type="radio"/>	vdisk_diamond5a	atlantic(galaxy)	diamond5-AIX7-SSP2(5)	16 GB
<input type="radio"/>	vdisk_diamond6a	atlantic(galaxy)	diamond6-AIX616-SSP2(3)	16 GB
<input type="radio"/>	vdisk_diamond8a	atlantic(galaxy)	diamond8-AIX7 TL1 beta(8)	16 GB
<input type="radio"/>	xdiamond4_1lv	clientvg	None	16 GB
<input type="radio"/>	xdiamond7_2lv	clientvg	None	16 GB
<input type="radio"/>	xdiamond7_4lv	clientvg	None	16 GB
<input type="radio"/>	xdiamond8	clientvg	diamond8-AIX7 TL1 beta(8)	16 GB

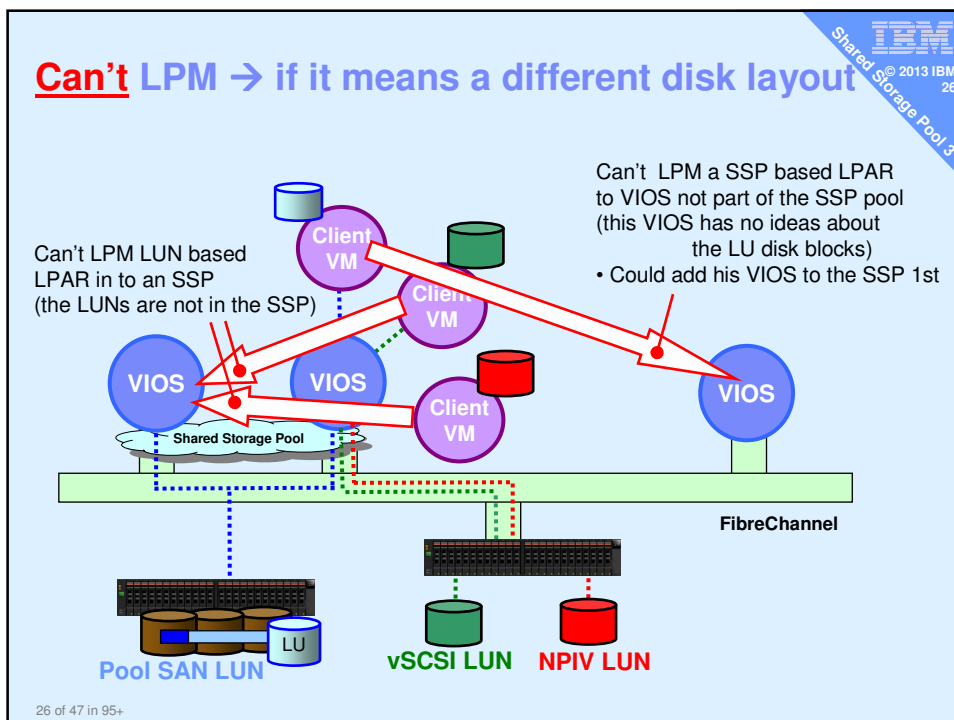

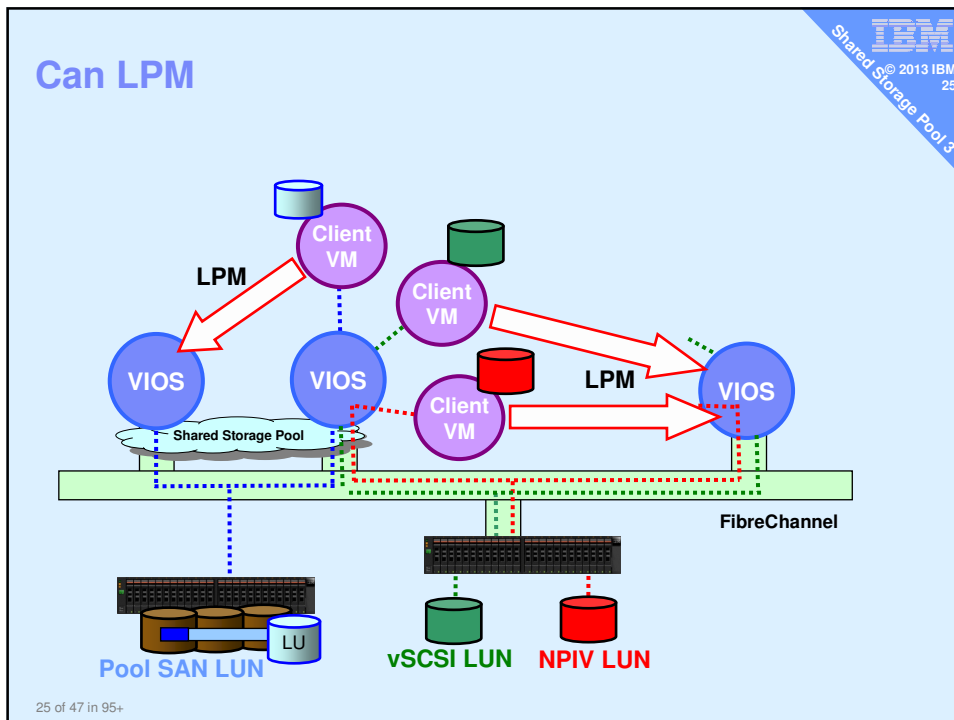

Show shared storage pool storage

SSP3 in practice

Mixed Environment SSP + vSCSI + NPIV

Adopt an AIX LPAR

Want to move your client VM to use the SSP!

27 of 47 in 95+

IBM
© 2013 IBM
27
Shared Storage Pool 3

Adopt an AIX LPAR

Want to move your client VM to use the SSP
1 Zone the SSP LUNs and add VIOS to the Shared Storage Pool

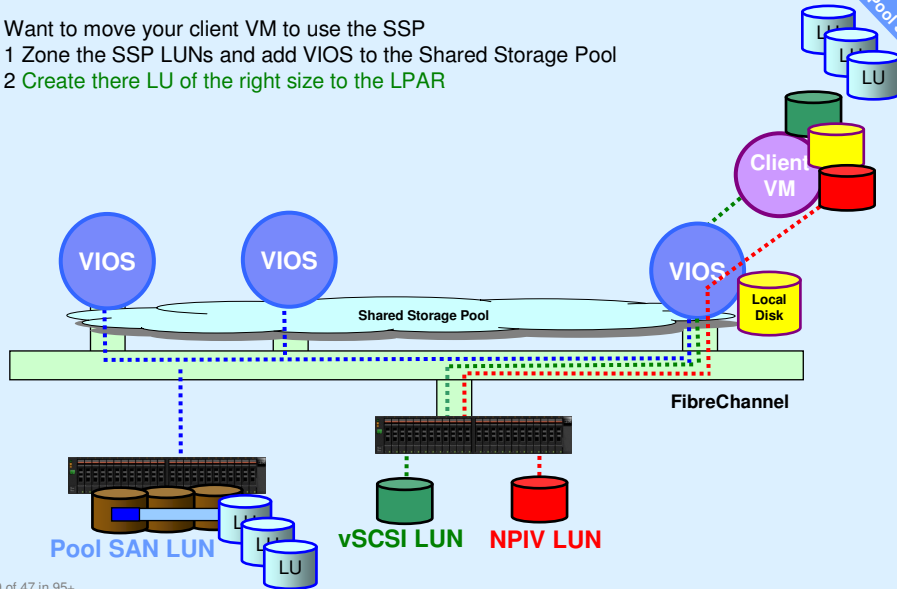

28 of 47 in 95+

IBM
© 2013 IBM
28
Shared Storage Pool 3

Adopt an AIX LPAR

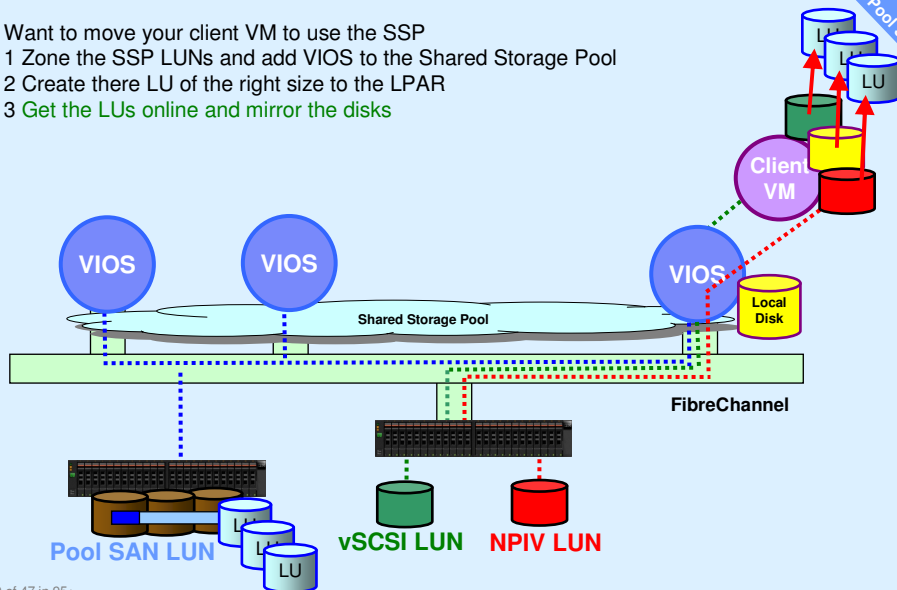

- Want to move your client VM to use the SSP
- 1 Zone the SSP LUNs and add VIOS to the Shared Storage Pool
 - 2 Create there LU of the right size to the LPAR

29 of 47 in 95+

Adopt an AIX LPAR

- Want to move your client VM to use the SSP
- 1 Zone the SSP LUNs and add VIOS to the Shared Storage Pool
 - 2 Create there LU of the right size to the LPAR
 - 3 Get the LUs online and mirror the disks

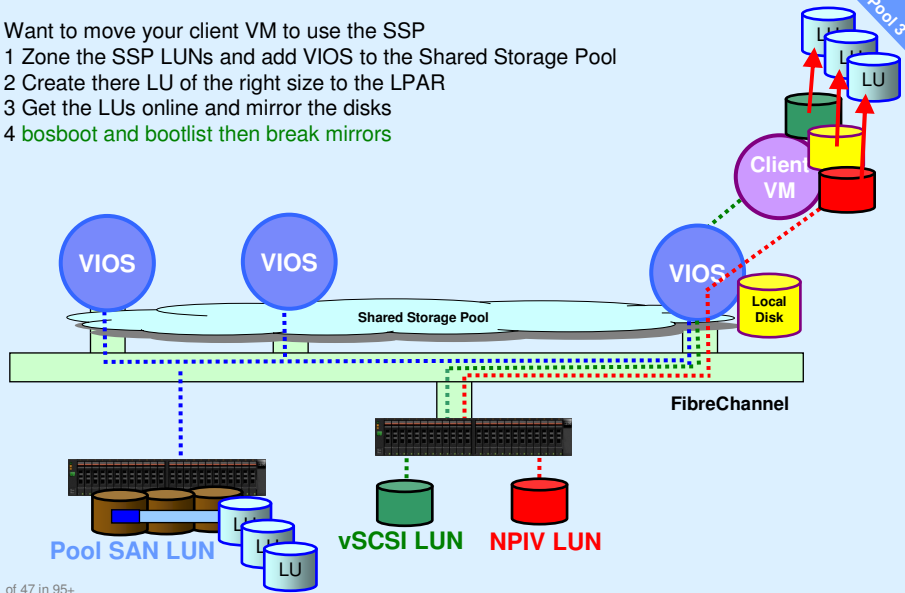

30 of 47 in 95+

Adopt an AIX LPAR

Want to move your client VM to use the SSP

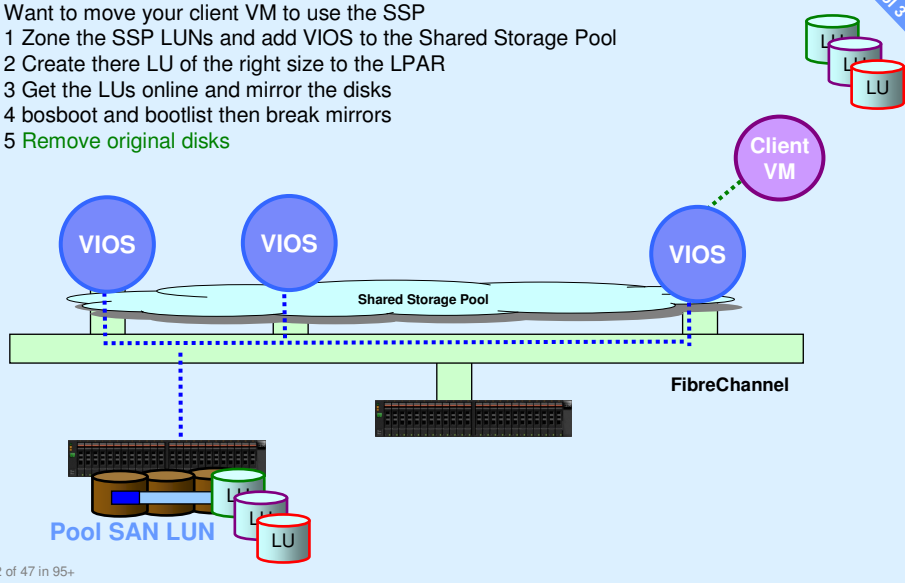

- 1 Zone the SSP LUNs and add VIOS to the Shared Storage Pool
- 2 Create there LU of the right size to the LPAR
- 3 Get the LUs online and mirror the disks
- 4 **bosboot** and **bootlist** then **break mirrors**

Adopt an AIX LPAR

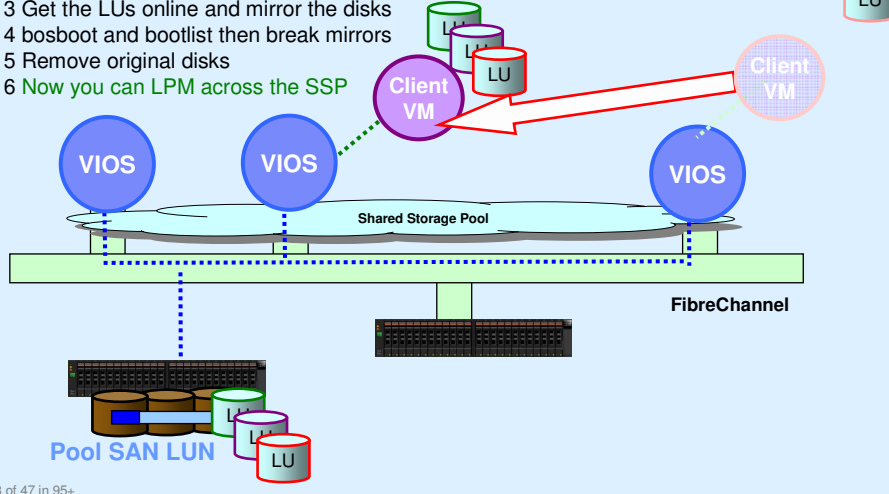

Want to move your client VM to use the SSP

- 1 Zone the SSP LUNs and add VIOS to the Shared Storage Pool
- 2 Create there LU of the right size to the LPAR
- 3 Get the LUs online and mirror the disks
- 4 **bosboot** and **bootlist** then **break mirrors**
- 5 **Remove original disks**

Adopt an AIX LPAR

- 1 Zone the SSP LUNs and add VIOS to the Shared Storage Pool
- 2 Create there LU of the right size to the LPAR
- 3 Get the LUs online and mirror the disks
- 4 bosboot and bootlist then break mirrors
- 5 Remove original disks
- 6 Now you can LPM across the SSP

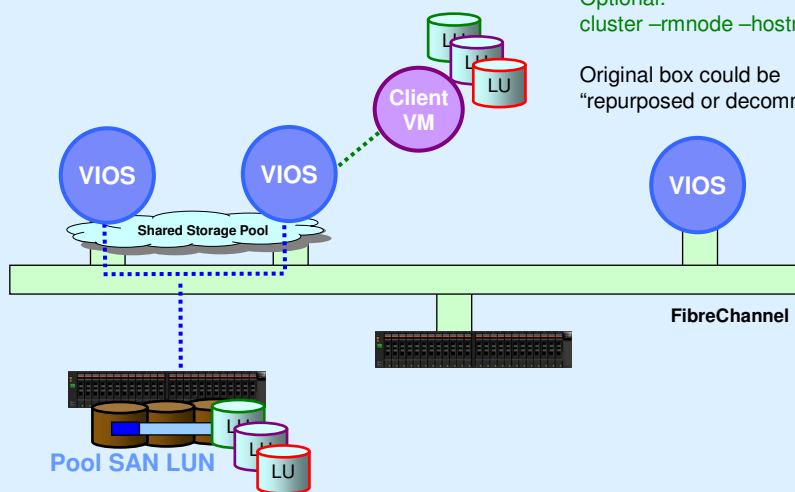

33 of 47 in 95+

Adopt an AIX LPAR =

“You will be assimilated!” The Borg.

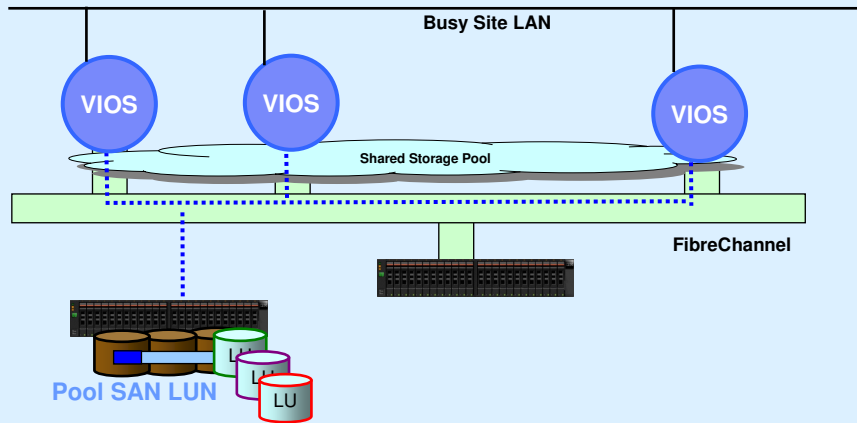

Optional:
cluster -rmnode -hostname ABC

Original box could be
“repurposed or decommissioned”

34 of 47 in 95+

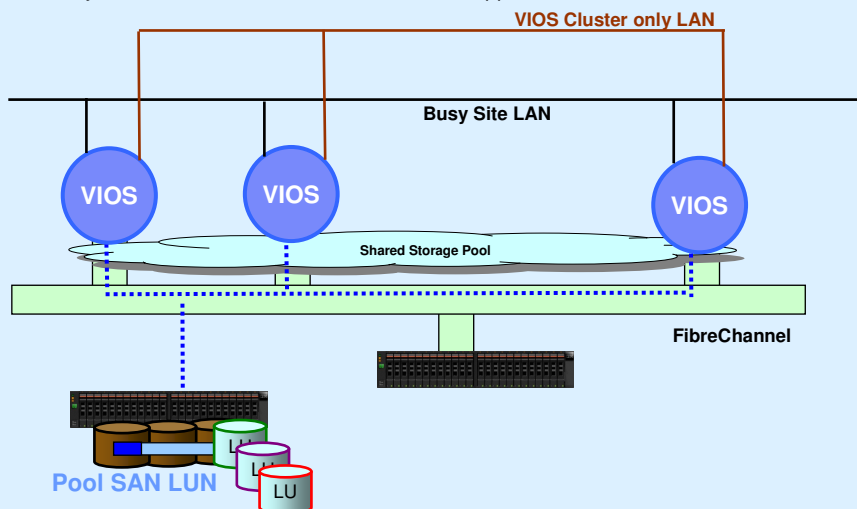

Dedicated VIOS Cluster network

35 of 47 in 95+

Dedicated VIOS Cluster network

Setup network route to the other VIOS to use this new network interface
Not really a VIOS SSP feature but now tested & supported

36 of 47 in 95+

Production Separation

Popular configuration is:
dual VIOS for Production
dual VIOS for Other workloads

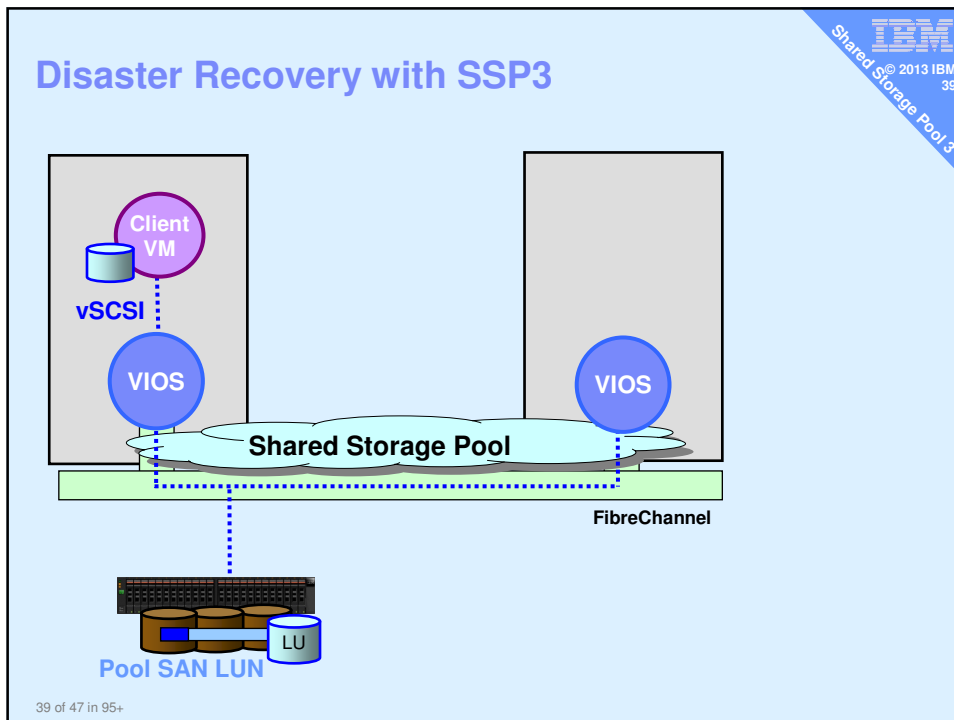

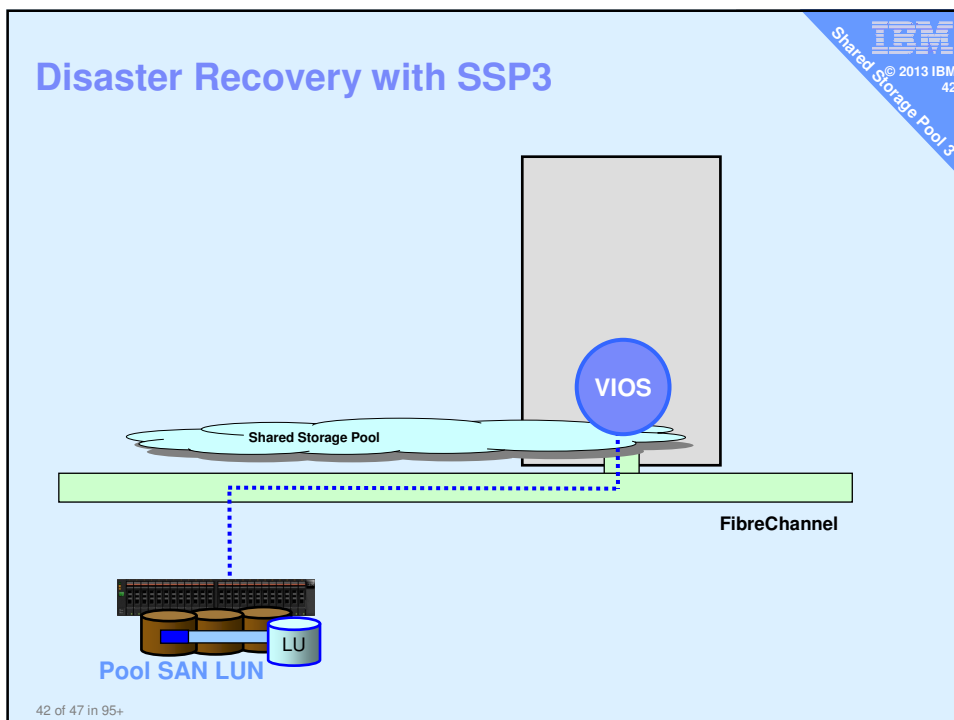

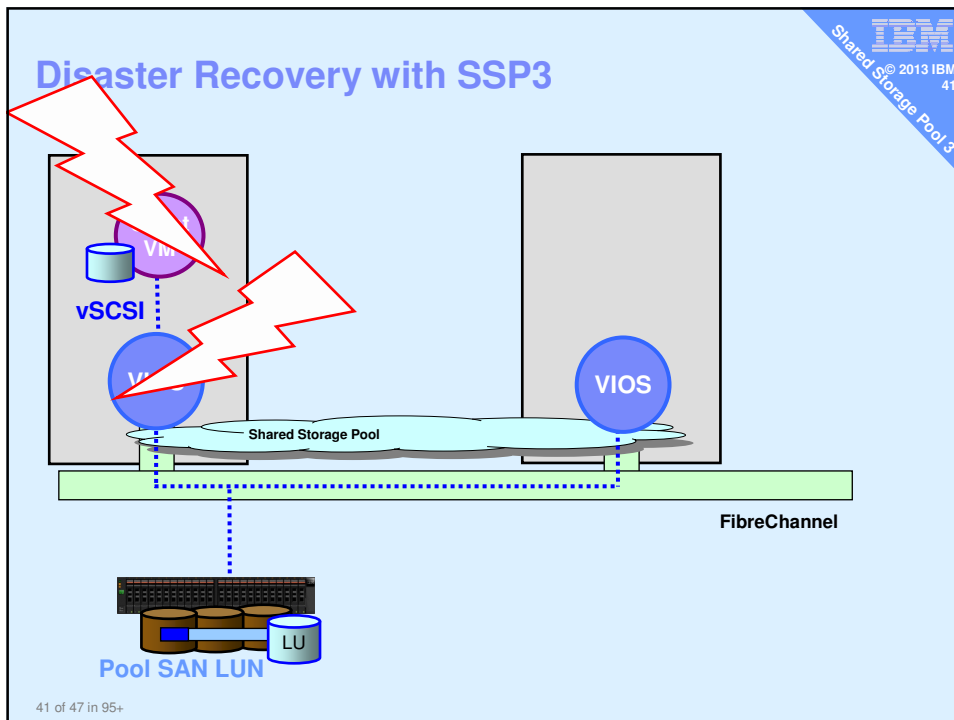

How can we add Shared Storage Pool and keep them separate ?

One machine on multiple pools

Note: Any one VIOS can only be part of only one SSP cluster
but different VIOS's can be on difference SSP clusters

IBM
© 2013 IBM
43
Shared Storage Pool 3

Disaster Recovery with SSP3 in ~2 minutes

Recreate the LPAR

1. Set CPU & Memory
2. Connect network(s)
3. Connect LU(s)*
4. Start to SMS + boot disk
5. Reboot

Key:
Ahead of Time
Optional & Specific
Very Dangerous!!

* VIOS: `mkbdsp -clustname ABC -sp DFG -bd vd42 -vadapter vhostX`

43 of 47 in 95+

IBM
© 2013 IBM
44
Shared Storage Pool 3

VIOS 2.2.2.1+ SSP3 & ISD 6.3.2+

3 VIOS Agents

- Common Agent
- VMControl Agent
- SSP Agent
- Discover → Inventory
- Now ISD knows about the SSP like other pools

6 Use VMControl to Capture copy of master LUs in the same Pool as a VMControl Appliance

7 Use VMControl to Deploy Appliance via Linked Clones. No copy is needed so sharing blocks until written too.

8 VMControl also creates LPAR, with CPU, RAM, virtual network, virtual disk setup

9 On starting: activation engine sets hostname, IP address, security etc. so it not identical copy to the master

4 Endpoint

- Common Agent
- Discover → Inventory

5 Make "master" image
Setup Activation Engine
Stop the client

1 Install & setup Systems Director plus VMControl

2 HMC

- Discover → Inventory

44 of 47 in 95+

Shared Storage Pool phase 3 – Call to Action

As a result of this presentation: I want you to

Do

1. Start negotiating with SAN team to hand-over a few TB
2. Decide your VIOS cluster architecture?
3. Get to VIOS 2.2.2.2 on all POWER6/7 ... ASAP

Feel

- Excited with easy SAN disk management & **LPM**

Think

- About how this technology could save you time, boost efficiency & increase responsiveness to users

45 of 47 in 95+

Want more on Shared Storage Pools?

Five videos to Get You Started Today

- AIXpert blog covering these videos
 - http://www.ibm.com/developerworks/community/blogs/aixpert/entry/shared_storage_pools_five_videos_to_get_you_started_today
- 1. Overview Presentation on what's new.
 - [Shared Storage Pool phase 3 \(SSP3\) New Features](#)
- 2. Get a LPAR on local disk to SSP in 5 minutes and then LPM to a new machine in 1 minute
 - [Migrating to Shared Storage Pool \(SSP3\) & then LPM](#)
- 3. Not everything needs HACMP but it would be nice to get those LPAR running again quickly
 - [SSP3 Recover a Crashed Machine's LPAR to Another Machine](#)

Questions

48 of 47 in 95+

The Shared Storage Pools future

- Phase 1 Q4 2010
 - Phase 2 Q4 2011
 - Phase 3 Q4 2012
 - Phase 4 Q? 201?
-
- 3 new features listen carefully ...

49 of 47 in 95+

Demo part 1 - Commands

1. Look around my cluster: cluster, lssp, lscluster

1. `cluster -list`
2. `cluster -status -clustername galaxy`
3. `lssp -clustername galaxy`
4. `lssp -clustername galaxy -sp atlantic -bd`
5. `lscluster -c (nodes) -i (network) -d (disk)`
6. `lscluster -m (more!) -s (local stats)`

2. Grow the cluster

1. Add a node to the galaxy cluster called: silvervios1
2. Show LUNs PVID's on silvervios1 with: `lspv -size`
3. `cluster -addnode -clustername galaxy -hostname silvervios1.aixncc.uk.ibm.com`

50 of 47 in 91

Demo part 2 - Add or Setup LU disks FAST

3. Add new SSP disk to AIX, cfgmgr, find new disk

- **gold6** add vdisk_gold6c, AIX cfgmgr x2
- Check lspv on gold6
- HMC Gold box → Config → Virtual → Storage → Create disk
- CLI add disk

```
mkbdsp -clustername galaxy -sp atlantic 16G
      -bd vdisk_gold6d -vadapter vhost5
```

4. Newly created LPAR

- HMC add SSP + virtual Optical **gold4**
- Gold4 has only CPU, RAM and vSCSI = no disks
 - goldvios: lsmap -all and check C14
- Add SSP disk(s) and attach virtual optical
- Start LPAR and console, install AIX

51 of 47 in 95+

Demo part 3 - LPM

5. Live Partition Mobility (LPM)

- Run worms
- Start LPM (**gold5** ↔ **red**)
- Via Gold5 → Ops → Mobility →
Validate check then Migrate

52 of 47 in 95+

Demo part 4 – Move to SSP and DR

5. You will be assimilated - mirroring **takes too long**

1. Internal disks,
2. add SSP disks **bronze2**
3. mirrorvg rootvg
4. Sync the mirrors,
5. bosboot/bootlist,
6. break mirror,
7. remove disks then LPM!

6. LPAR Disaster Recovery (SSP3 resurrection)

- **gold2** to bronze machine GOLD2reborn
- Script to write to file
- gold2: halt -q
- Get to bronzevio1 (new host)
- Find gold2 SSP disks
- Attach them to new LPAR HMC GUI or CLI
mkbdsp -clustername galaxy -sp atlantic
-bd vdisk_gold2a -vadapter vhost5
- Start LPAR in SMS to select a boot list

BACKUP – 50 more slides

Topics

- Clusters
- Snapshot
- Working with Dual VIOS
- Thin Provisioning
- Alerts when the pool is nearly empty
- Storage mobility and repository recovery
- SSP commands reminder sheet

- Demo details – now 4 major movies available

55 of 47 in 95+

Terms Shared Storage Pool 3

1 SSP2 cluster = set of co-operating Virtual I/O Servers
The VIOS can only be in one cluster

Here we show two clusters

56 of 47 in 95+

Terms

Shared Storage Pool 3

2 SSP2 pool = set of LUNs
Data LUNs + a special Repository LUN = cluster meta-data
Currently a cluster can only have one pool

1 SSP2 cluster = set of co-operating Virtual I/O Servers
Currently a VIOS can only be in one cluster

Terms

Shared Storage Pool 3

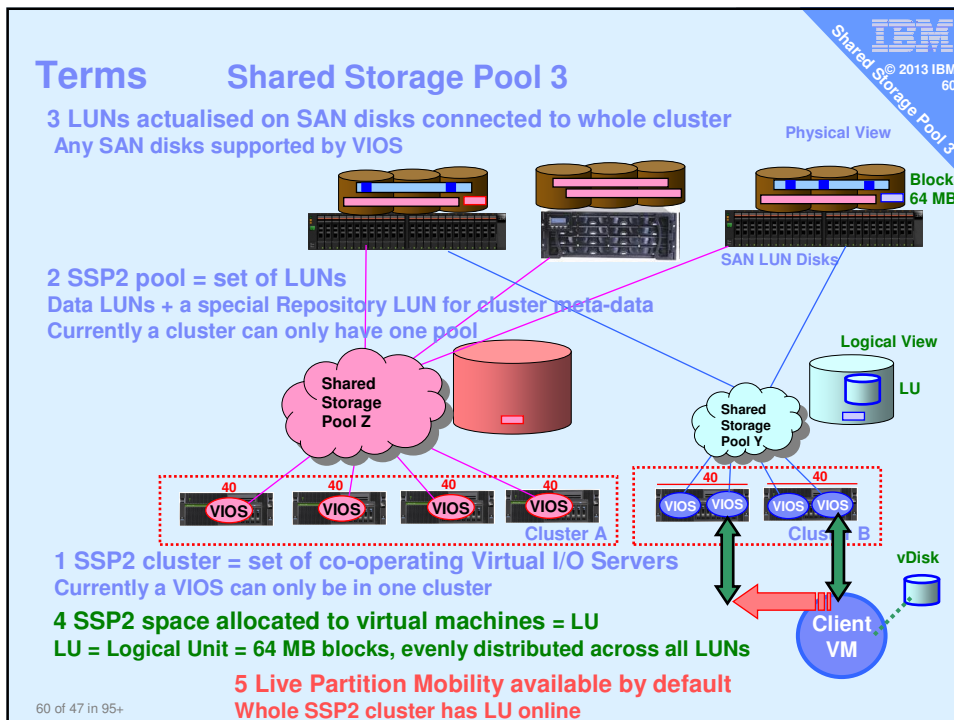

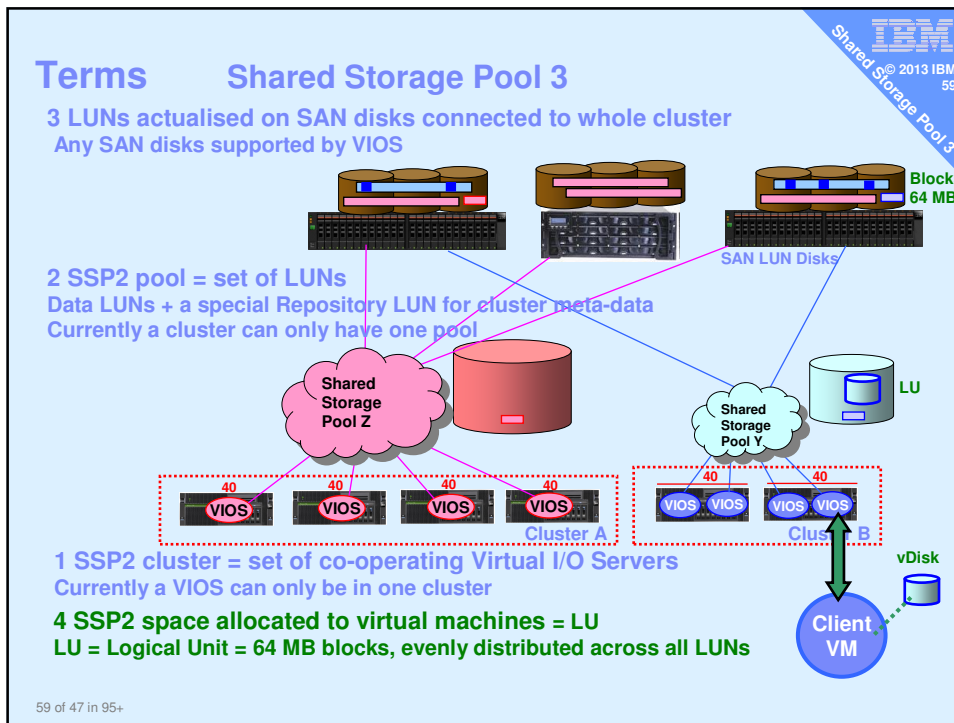

3 LUNs actualised on SAN disks connected to whole cluster
Any SAN disks supported by VIOS

2 SSP2 pool = set of LUNs
Data LUNs + a special Repository LUN for cluster meta-data
Currently a cluster can only have one pool

1 SSP2 cluster = set of co-operating Virtual I/O Servers
Currently a VIOS can only be in one cluster

Preparation

- All the Cluster VIOSs need the LUNs online
Make sure they are available = Zoned
- **BEFORE** you start the cluster for all LUNs
chdev -dev <device name> -attr reserve_policy=no_reserve
- Don't forget this for extra disks that you add later
- Forgetting this = a real mess to make the
low level disk attribute change

61 of 47 in 95+

List cluster & cluster nodes

```
$ cluster -list
CLUSTER_NAME:    galaxy
CLUSTER_ID:     64517962b01c11e1ac6aba367e934e03
$
$ cluster -status -clustername galaxy
Cluster Name      State
galaxy            OK

Node Name          MTM                Partition Num  State  Pool
                  State
diamondvios1      8233-E8B02100271P  2             OK    OK
diamondvios2      8233-E8B02100271P  1             OK    OK
redvios1          8203-E4A0310E0A41  1             OK    OK
$
```

Example of a 3 node cluster

62 of 47 in 95+

House keeping

You can remove a node from the cluster

- LPM any important client Virtual machines elsewhere
- Stop remaining VMs
- Remove client VMs
- Remove virtual disks
- then

```
$ cluster -rmnode -clustername galaxy \  
-hostname redvios1.ibm.com
```

You can also remove the cluster completely

- Once all disk space unassigned & nodes removed

```
$ cluster -delete -clustername galaxy
```

Pool Disk Space Management

Content

- Allocate pool disk space and give to a VM
 - Ditto as two commands
- Removing the disk space
- Monitoring the pool

64 of 47 in 95+

IBM
© 2013 IBM
64
Shared Storage Pool 3

Allocate disk space & assign to client VM

```
$ mkbdsp -clustername galaxy \  
-sp atlantic 16G -bd vdisk_diamond6a \  
-vadapter vhost2
```

```
Logical Unit vdisk_diamond6a has been created with udid:  
615af85de5acad39a8827e9cd01d6b36.  
Assigning file "vdisk_diamond6a" as a backing device.  
Vtscsi3 Available.  
$
```

Notes:

- 16 GB is not actually allocated until written too
- vdisk_diamond6a is just a name = reminder of the VM using it
- vhost2 is the virtual SCSI adapter for client VM diamond6

65 of 47 in 95+

Same but 2 steps (create LU then assign it)

```
1) Create Logical Unit Note: no -vadapter option  
$ mkbdsp -clustername galaxy -sp atlantic 10G -bd LU42  
Lu Name:LU42  
Lu Udid:374a609cb072e4015d558ff290b9f0bd
```

List the pool contents

```
$ lssp -clustername galaxy -sp atlantic -bd  
Lu Name Size(mb) ProvisionType Lu Udid  
LU42 10240 THIN 374a609cb072e4015d558ff290b9f0bd  
...
```

2) Example of two ways using "-bd LU42" or "-luudid <hexidecimal>"

- -bd only works if LU42 is unique
- Note: below **no Size argument** (or it creates another LU with same name!)

```
$ mkbdsp -clustername galaxy -sp atlantic -bd LU42 -vadapter vhost2  
Assigning file "LU42" as a backing device.  
VTD:vtscsi1
```

- or -

```
$ mkbdsp -clustername galaxy -sp atlantic \  
-luudid 374a609cb072e4015d558ff290b9f0bd -vadapter vhost2  
Assigning file "374a609cb072e4015d558ff290b9f0bd" as a backing device.  
VTD:vtscsi1
```

66 of 47 in 95+

Dual path via Two VIOSs

1 Setup virtual SCSI adapter pairs as normal

- client VM virtual SCSI adapter A ↔ VIOS C
- client VM virtual SCSI adapter B ↔ VIOS D

2 on VIOS C: use “lsmmap -all” to map slot to vhostN

- mkbdsp -clustername galaxy -sp atlantic 16G
-bd vdisk_red6a -vadapter vhostN

3 on VIOS D: use lsmmap -all to map slot to vhostM

- mkbdsp -clustername galaxy -sp atlantic
-bd vdisk_red6a -vadapter vhostM

4 On the client VM

```
$ lspath
Enabled hdisk0 vscsi0
Enabled hdisk0 vscsi1
```

Note: No size (16G) 2nd time

5 LPM still available – dual VIOS to dual VIOS

67 of 47 in 95+

Removing an LU (Logical Unit)

Assuming it is NOT used !!

On the VIOS remove disk space
rmbdsp = remove backing device from storage pool

By name

```
$ rmbdsp -clustername galaxy -sp atlantic  
-bd vdisk_diamond6a
```

By LU hexadecimal id

```
$ rmbdsp -clustername galaxy -sp atlantic  
-luudid 858152297879adfe0d75b05f586d36ee
```

68 of 47 in 95+

House keeping

Add more physical LUNs to the Pool

```
$ chsp -add -clustername galaxy -sp atlantic  
hdisk8
```

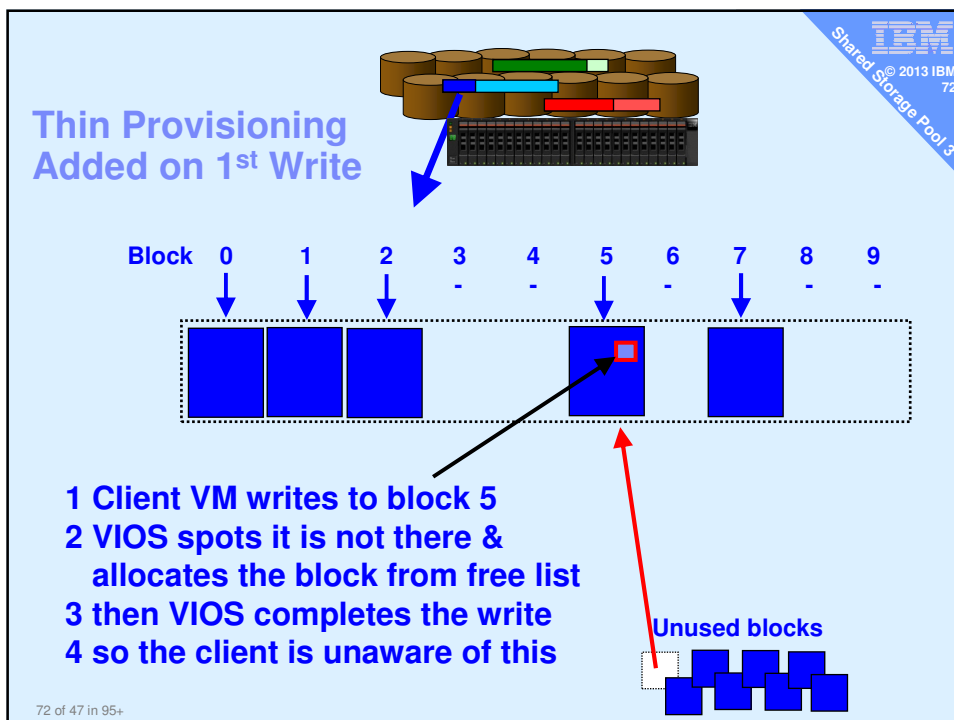

Remove a physical LUN from the Pool

- You can not with this release
- We can replace a disk but not remove one
 - Replacement disk - equal or larger size

Experiments in Thin provisioning

= Allocating disk blocks only when they are used i.e. written

IBM
© 2013 IBM
73
Shared Storage Pool 3

Thin Provisioning

Size 16 GB is actually the max.

Only 3 GB Reduction of free space

FibreChannel

Virtual I/O Server

vSCSI

lsvg rootvg
Free = 11GB
Used = 5GB

Client VM

lspv hdisk0
Disk 16GB

- mkbdsp states the “LU” size
- Blocks assigned only when written
- After installing AIX 7 (could be any supported OS)
- AIX sees 16 GB disk
- AIX has allocated 5 GB in rootvg
- But not actually written to all 5 GB
 - Paging space not used
 - Free space in filesystems not used
 - Sparse files have “holes”
- Brand new pool & AIX 7 only 3 GB used from the pool
- Instead of unused disk space in every VM, now it is SSP “pooled”

Complete guesswork: 20,000 machines * 20 VMs * 16 GB unused = 6 PetaBytes

73 of 47 in 95+

IBM
© 2013 IBM
74
Shared Storage Pool 3

Thick Provisioning

- Doh! A no-brainer!
- Like Thin but actually allocate all the disk space
- New option: **mkbdsp ... -thick**

The point is

- No problem, if the free list empties
- Good for more important work/production or you prefer not to dynamically add blocks

74 of 47 in 95+

Monitoring: topas on VIOS then "D"

```

Topas Monitor for host:   diamondvios1Interval: 2   Fri Jan 14 14:46:00 2011

17945 Pool Physical Free
29607 Pool Physical Used
Pool use 29607/47522x100=62%

59392 Allocated
Pool Over commit 59392/47522= 1.25
allocated 25% more than I have!
= Thin provisioning

76 of 47 in 95+

Monitoring Disk use with lssp – SSP3

```
$ lssp -clustername stars -sp atlantic -bd
Lu Name      Size (mb) ProvisionType %Used Unused (mb) Lu Udid
orange7a    32768      THIN           9% 29615      7d58538152 ...
orange7b    32768      THIN           0% 32770      76136907aa ...
```

```
$ lssp -clustername stars
POOL_NAME:      atlantic
POOL_SIZE:      130944
FREE_SPACE:     125514
TOTAL_LU_SIZE:  65536
OVERCOMMIT_SIZE: 0
TOTAL_LUS:      2
POOL_TYPE:      CLPOOL
POOL_ID:        000000009893E510000000050740962
```

See who is using most disk
& who might run out

Over-commit
Good to know the “worst case”

Thin provisioning risks running out of space → Ek!
Next write needing a new SSP block, gets a disk error!
Just don't go there – you need to be warned!

Thin Provisioning Alerts

- To list the alert threshold:
 - **alert -list -clustername galaxy -sname atlantic**
 - \$ **alert -list -clustername galaxy -sname atlantic**
 - PoolName: atlantic
 - PoolID: 0000000009893EDD000000004F174D22
 - ThresholdPercent: 35 ←these are the defaults
 - OverCommitPercent: n/a
- Set alerts to warn on free pool space getting too low %
 - **alert -set -clustername galaxy -sname atlantic -type threshold -value 10**
- Set alerts to warn on overcommit getting too large %
 - **alert -set -clustername galaxy -sname atlantic -type overcommit -value 30**
- To remove the alert:
 - **alert -unset -clustername galaxy -sname atlantic -type threshold**
 - Threshold is set to 0 (zero) – it will not happen!!

79 of 47 in 95+

House keeping – Alert Reporting

- Reported on **any one of the VIOS cluster**
- padmin user: errlog
 - Like AIX errpt
 - \$ errlog | more
 - IDENTIFIER TIMESTAMP T C RESOURCE_NAME DESCRIPTION
 - 0FD4CF1A 0215112612 I O VIOD_POOL (2) Informational Message
 - ...
 - \$ errlog -ls | more
 - See example on the next page
- Can also be reported to high levels SM like Systems Director etc.

82
Shared Storage Pool 3

House keeping - Thin Provisioning Alerts

- It is vital that you get these warning messages
- Suggest on ALL VIOS
 1. Email the Pool stats every night to the admin guys (cron as root)

```

./home/padmin/.profile
lssp -clustername galaxy | /usr/bin/mailx -s "SSP stats" ops@acme.com

```
 2. Script to check and if free space is low then email or send phone TEXT message or escalate
- Possible reactions are:
 - Add a new LUN to the pool,
 - Delete allocated space = unused LU or entire VM & space
 - Drop a Snapshot
 - Look and check the larger VM really need the space.

82 of 47 in 95+

House keeping - Thin Provisioning Alerts

IBM Systems Director captures these events

- Discover, access and Inventory all VIOS.

The screenshot displays the IBM Systems Director interface. The left-hand navigation pane shows various system management categories. The main content area is titled 'Problems' and shows a table of active problems. A tooltip is visible over a row in the table, providing details about a Storage Pool Threshold alert.

Sev...	Name	Severity	System	Component	Category	Time Re...	Di...
	A Storage Pool Thres...	Warning	goldvios1	goldvios1	Hardware Status	15 Feb 201...	A

A Storage Pool Threshold alert event occurred on pool D_E_F_A_U_L_T_061310 pool id 92d26852ec45382 in cluster galaxy cluster id 00641e2a422711e194cbf60271715fc2. The alert event received is: Threshold Exceeded.

83 of 47 in 95+

Snapshot

84 of 47 in 95+

Snapshots on VM disks and Cloning

Snapshot available using

- Advanced SAN disks or SAN Volume Controller (SVC)

but now VIOS admin can do this too!

Currently: no way to save the snapshot off-line

Snapshot + Drop

- Very quick
- Allows point in time backup
- Later delete the original to reclaim the space

Examples:

- Backup VM stopped, quiesce, live

Snapshot + Roll-back

- Very quick
- Useful for lots of reasons →
- Stop the client VM
- Restart on original copy
- Discard newer copy

Examples:

- Practice OS or App update
- Training & reset
- Benchmark & reset
- Failure & avoid recovery from tape
- Save points for batch runs

Supports single disk or a consistent set of disks

Snapshot – create, list, delete or rollback

Snapshot Usage:

```
snapshot -create <filename> -clustername galaxy -sname atlantic -lu LUs
```

```
snapshot -delete <filename> -clustername galaxy -sname atlantic -lu LUs
```

```
snapshot -rollback <filename> -clustername galaxy -sname atlantic -lu LUs
```

```
snapshot -list -clustername galaxy -sname atlantic
```

Notes:

- Alternatively swap “-lu LU_name(s)” for “-luudid Hexadecimal”
- LUs means a space separated list disk names

Snapshot – create and list

Create

```
$ snapshot -create diamond5s.snap -clustername galaxy
  -spname atlantic -lu vdisk_diamond5a
```

List

```
$ snapshot -list -clustername galaxy -spname atlantic
Lu Name      Size(mb)    ProvisionType  Lu Udid
vdisk_diamond5a 16384      THIN          b3f3a . . .
Snapshot
diamond5s.snap
```

Also snap shots appear in the lssp output

```
$ lssp -clustername galaxy -sp atlantic -bd
Lu Name      Size(mb)    ProvisionType  Lu Udid
vdisk_diamond5a 16384      THIN          b3f3a . . .
Snapshot
diamond5s.snap

vdisk_diamond6a 16384      THIN          4c9e9 . . .
```

87 of 47 in 95+

Snapshot – delete or rollback

When sure you never want to rollback

Delete original & continue on the current blocks

```
$ snapshot -clustername galaxy -delete diamond5t.snap
  -spname atlantic -lu vdisk_diamond5a
```

Rollback to a snapshot

Stop the virtual machine/LPAR then

```
$ snapshot -clustername galaxy -rollback diamond5t.snap
  -spname atlantic -lu vdisk_diamond5a
```

Warning:

**You loose any updates you made since that snapshot
Any snapshots since that snapshot are removed**

88 of 47 in 95+

Snapshot Model

Original Set

Snapshot Model

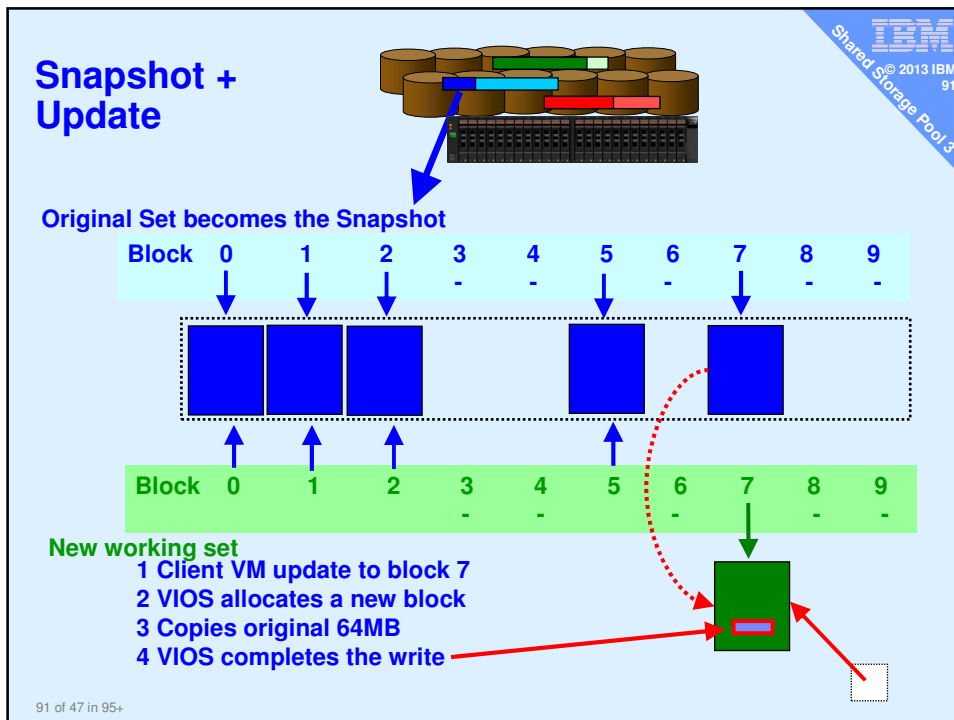

Original Set becomes the Snapshot

New working set

Creating a snap shot only involved copying the meta data
i.e. list of the blocks within the LU (not the block themselves)

Storage Management

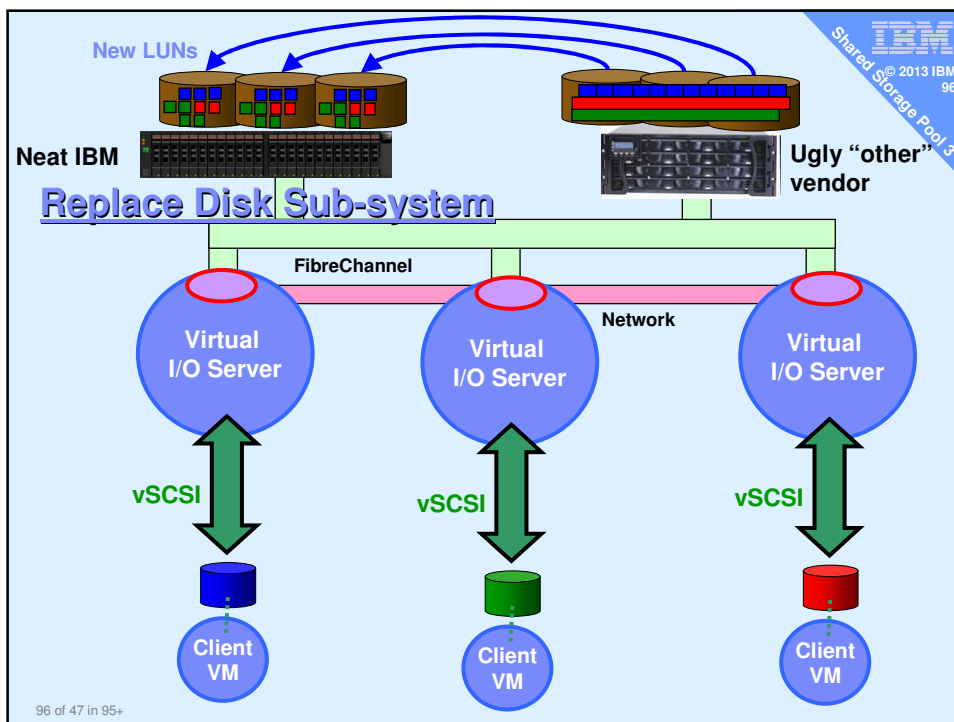

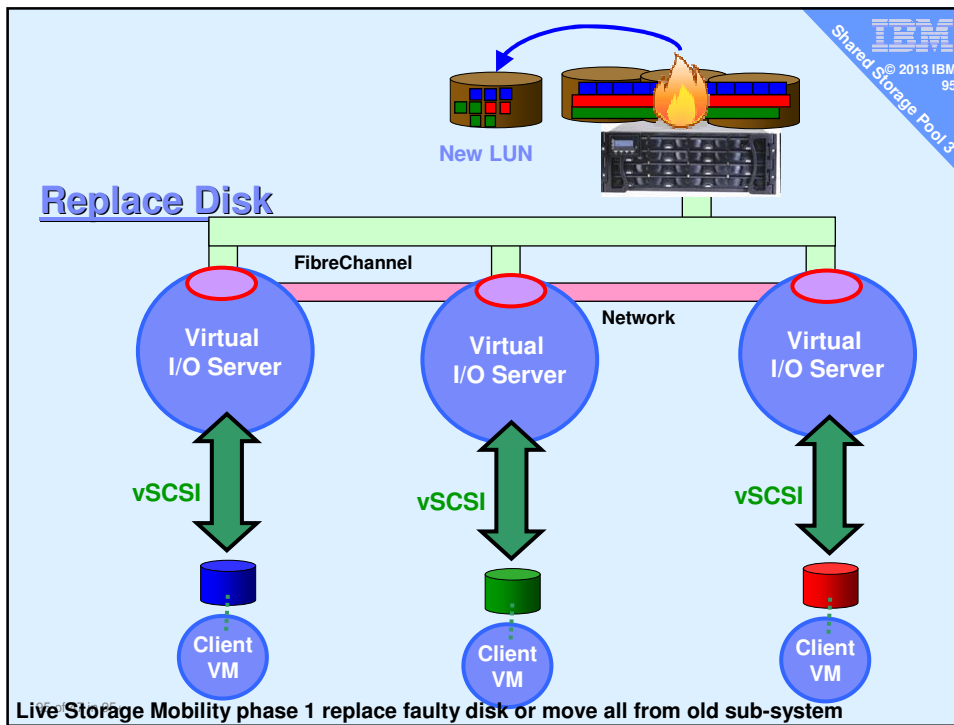

- Reminder currently,
 - One pool of large LUNs
 - Pool can be on a mix of brands or generations of disk sub-systems
 - 64 MB chunks are spread as evenly as possible across LUNs

Live Storage Mobility

Server Admin would like to :

- A. Replace a faulty LUN
- B. Move all blocks off one disk subsystem (retiring a disk subsystem)
- C. Recover from repository failure
- D. Select which disk subsystems a particular VM uses
- E. Ensure mirrors are on different subsystems (even different sites)

- A and B → via replace physical disk
 - `chsp -replace -clustername galaxy -sp atlantic -oldpv hdisk4 -newpv hdisk24`
- C → see `viosbr` command (later)
- D and E → in a later SSP release
 - Could use SVC now for lower level mirror (E)

What if you loose the VIOS?

- Updated **viosbr** supports backup / restore of SSP config

- **Warning: this saves the config but not the data**

- Backup – will perform regular backups for you

```
viosbr -backup -clustername Name -file File \
[-frequency daily|weekly|monthly [-numfiles fileCount]]
```

- View

```
viosbr -view -file File -clustername Name [-type devType][[-detail | -mapping]]
```

- Restore

```
viosbr -restore -clustername N -file F -subfile NodeFile [-validate | -inter | -force][[-type devType]
viosbr -restore -clustername N -file F -repopvs disks [-validate | -inter | -force][[-type devType][[-currentdb]
viosbr -restore -clustername N -file F -subfile NodeFile -xmlvtds
viosbr -recoverdb -clustername N [-file F ]
viosbr -migrate -file F
```

- Can recover from

1. Repository Disk is corrupted (see -repopvs)
2. One SSP VIOS is reinstalled
3. SSP Database is corrupted
4. Restore to old configuration on the VIOS node
 - Changes done to SSP mappings on the node after a backup
