## PowerSC Tools for IBM i

*A service offering from IBM Systems Lab Services*

Thomas Barlen

Consulting IT Specialist

IBM Power Systems Security

## PowerSC Tools for IBM i

PowerSC Tools for IBM i helps clients ensure a higher level of security and compliance

### Client Benefits

- ◆ Simplifies management and measurement of security & compliance
- ◆ Reduces cost of security & compliance
- ◆ Reduces security exposures
- ◆ Improves the audit capability to satisfy reporting requirements

# IBM i Security Services from IBM Systems Lab Services

## 1. IBM i Security Assessment

An experienced IBM i consultant will collect and analyze data using PowerSC Tools for IBM i. The engagement results in a comprehensive report with findings and recommendations for improved compliance and security remediation.

## 2. IBM i Single Sign On Implementation

SSO improves end user productivity and saves help desk costs. In this services engagement, an experienced IBM consultant will advise on SSO options and provide implementation assistance leveraging the SSO suite components of the PowerSC Tools for IBM i.

## 3. IBM i Security Remediation

An experienced IBM consultant will advise on best practices to address IBM i security and compliance issues. The consultant will provide remediation assistance leveraging the PowerSC Tools for IBM i.

## 4. IBM i Encryption Services

An experienced IBM consultant will advise on best practices to implement data encryption on IBM i leveraging the PowerSC Tools for IBM i Encryption Suite as appropriate. Tape Encryption implementation services are also available.

**For more information on PowerSC Tools for IBM i offerings and services, contact:**

## PowerSC Tools for IBM i

Tools / Feature	Function	Benefit
<b>Compliance Assessment and Reporting Tool</b>	Daily compliance dashboard report/s at LPAR, system or enterprise level	Enables compliance officer to demonstrate adherence to pre-defined security policies
<b>Security Diagnostics</b>	Reports detailing security configuration settings and identifying deficiencies	Reduces operator time involved in remediating security exposures
<b>Privileged Access Control</b>	Controls the number of privileged users	Ensures compliance with industry guidelines on privileged users
<b>Secure Administrator for SAP</b>	Manages and controls access to powerful SAP administrative profiles	Eliminates sharing of SAP administrative profiles with enhanced security auditing
<b>Access Control Monitor</b>	Monitors security deviations from application design	Prevents user application failures due to inconsistent access controls
<b>Network Interface Firewall for IBM i Exit Points</b>	Controls access to Exit Point interfaces such as ODBC, FTP, RMTCMD, etc	Reduces threat of unauthorized security breach and data loss
<b>Audit Reporting</b>	Consolidates and reduces security audit journal information	Simplifies audit analysis for compliance officer and/or auditors
<b>Certificate Expiration Manager</b>	Simplifies management of digital certificates expiration	Helps operators prevent system outages due to expired certificates
<b>Password Validation</b>	Enhances IBM i operating system protection with stricter password validation	Enables security officers to ensure user passwords are not trivial
<b>Single Sign On (SSO) Suite</b>	Simplifies implementation of SSO and password synchronization	Reduces password resets and simplifies end user experience
<b>Encryption Suite</b>	Simplifies implementation of cryptography using IBM i operating system capabilities	Helps application developers meet data security standards and protect critical data

**PowerSC Tools for IBM i is a service offering from IBM Systems Lab Services**

# Security Diagnostics Introduction

## *In depth security collection and reporting*

- A tool that can be used to
  - Simplify security management by providing advanced security reports
  - Reduce time to create reports for auditors
  - Help analyzing the security state of your IBM i system and application environment
- Provides in-depth information of all security related information, such as
  - Object permissions
  - System value reports
  - Exit point programs
  - Program references
  - Trigger programs
  - Work Management
  - Auditing configuration
  - Network attributes
  - Integrated File System
  - Over 70 reports
  - Output stored in DB2 tables

## Security Diagnostics Introduction (cont'd)

- Security Diagnostics extracts far more information from the system than standard reports, such as the reports available from the SECTOOLS menu
- Extensive number of object and security attributes are retrieved
- Many reports provide a complete set of information for a series of objects or all objects of a certain category versus IBM i base CL commands that allow you to only display information on an object by object basis
- Simplifies greatly the extraction of information and correlations of data and events
- The tool is constantly enhanced with new functions

## Implementation

- The Security Diagnostics tool is licensed per server or as an enterprise license
  - License keys are required for installation
- Shipped in a save file
- The tool is installed via a Load Security Tool command
- Installed in library QZRDSECREV
  - Library contains all required objects
  - Public access is \*EXCLUDE
- When started the first time, the tool creates a library QZRDSECRPT
  - This library will contain database tables for information that has been collected on the system
  - Contains also an output queue AUDITOUTQ
- The tool must be run by a user profile with at least the \*ALLOBJ, \*AUDIT, \*IOSYSCFG, \*JOBCTL and \*SECADM special authorities

## Using Security Diagnostics

- The tool comes with a menu that let's you select the kind of reports that you want
  - The menu is opened by the command SECREVCMD
  - Each category provides a list of reports that can be generated

```

Profiles   Programs   JobD      IFS       Sysval    Comms     Libraries  Subsystem
Misc.     Ad-Hoc1    Ad-Hoc2

Ver: 7.10          PowerSC Tools for IBM i Security Diagnostics

                    IBM Systems Lab Services                    I5OSP4

Submit Job to Batch..... Y
Hold Job on Job Queue... N
Job Queue to Submit to.. SECRJOBQ
Job Queue Library..... *LIBL
Run Job Now..... Y
Date to Run Job..... 02/05/15
Time to Run Job..... 12:43:27

Refresh Data.          View Selected
Select All...         Deselect All.

F3=Exit   F5=Refresh   F7=Run/Submit
  
```

Default: N  
Select Y if you want to submit the job now

You can also schedule the job to be run at a later time

## The collection process

- The collection process is performed in a single job
- Job is submitted to job queue SECRJOBQ and runs in dedicated subsystem QISECSBS
- To prevent interference with normal workload, the collection job runs at priority 60

```

                                Work with Active Jobs
                                                                I5OSP4
                                                                02/04/15  21:02:46
CPU %:      .0      Elapsed time:  00:00:00      Active jobs:  234

Type options, press Enter.
  2=Change   3=Hold   4=End   5=Work with   6=Release   7=Display message
  8=Work with spooled files   13=Disconnect ...

-----Elapsed-----
Opt  Subsystem/Job  Type  Pool  Pty      CPU  Int   Rsp  AuxIO  CPU %
    QISECSBS      SBS    2    0      .0    0     0    0      .0
    SECREVPGM     BCH    2    60     .1    0     0    0      .0

                                                                Bottom

Parameters or command
===>
F3=Exit   F5=Refresh   F7=Find   F10=Restart statistics
F11=Display thread data  F12=Cancel  F23=More options  F24=More keys

```

## The collection job has finished, what now?

- You can wait until your collection job has finished or already start analyzing what has been collected so far
- Library QZRDSECRPT contains all collected information

Work with Objects Using PDM

I5OSP4

```
Library . . . . . QZRDSECRPT      Position to . . . . .
                                      Position to type . . . . .
```

Type options, press Enter.

```
  2=Change      3=Copy      4=Delete      5=Display      7=Rename
  8=Display description  9=Save      10=Restore    11=Move ...
```

Opt	Object	Type	Attribute	Text
	AUDITOUTQ	*OUTQ		iSAT Out Queue
	ADPPGMAUDF	*FILE	PF-DTA	Adoption Programs with Auditing Value
	ADPPGMS	*FILE	PF-DTA	Programs that adopt *ALLOBJ Profiles
	ANZDFTPWDF	*FILE	PF-DTA	List of User Profiles that have Defau
	ANZDFTS	*FILE	PF-DTA	Profiles with Default Passwords
	ASPOBJS	*FILE	PF-DTA	ASP configuration objects file
	ATNPGMS	*FILE	PF-DTA	Attention Program Attributes
	AUTLOBJ	*FILE	PF-DTA	Objects Secured by an AUTL

More...

Parameters or command

```
F3=Exit      F4=Prompt      F5=Refresh      F6=Create
F9=Retrieve   F10=Command entry  F23=More options  F24=More keys
```

## Analyzing the collected information

- You can use your preferred method (i.e. SQL or Query or WebQuery) to analyze the collected information
- Sometimes it is an advantage to create a separate library to store your Query or SQL definitions
  - Makes it easy to create reoccurring reports

### Example of using a Query to create a report over the ANZDFTPWDF file

The ANZDFTPWD operating system command only creates a spool file without any reference to special authorities, audit settings, etc.

This report contains a list of all user profiles on system i5OSP4 that have default passwords (User profile name = Password). It also lists the special authorities a user profile might have.

#### List of user profiles with default passwords i5OSP4

```
02/05/15 14:42:23      User profiles with default passwords      PAGE      1
                                STATUS                                CMD
                                Before                                Audit
                                Action
MASTER1      *ENABLED      X      -      -      X      -      -      -      -      -
OL5002      *ENABLED      -      -      -      -      -      X      -      -      -
OL5003      *ENABLED      -      -      -      -      -      X      -      -      -
OL5004      *ENABLED      -      -      -      -      -      X      -      -      -
```

## Where do you find information about the tool and files

- There is a comprehensive user's guide that explains the installation process as well as information about the collected information and the files the information is stored in

### 6. Tool Output Database Guide

This section lists all the Database files created by the Tool and the Fields they contain.

All Corresponding Spooled Reports are named the same as the Database files with few exceptions and can be found in Output Queue QZRDSECRPT/AUDITOUTQ

No.	Description	Output File	Fields
1	Create a list of adopted programs that have an object level audit value = *NONE	<b>QZRDSECRPT/ADPPGMAUDF</b>	<ul style="list-style-type: none"> <li>- System name</li> <li>- Display date</li> <li>- Display time</li> <li>- Library</li> <li>- Object</li> <li>- Object type</li> <li>- Object attribute</li> <li>- Object owner</li> <li>- Object auditing value</li> <li>- Library ASP device name</li> <li>- Object ASP device name</li> <li>- Text description</li> </ul>
2	List of Users with Default Passwords Assigned	<b>QZRDSECRPT/ANZDFTPWDF</b>	<ul style="list-style-type: none"> <li>- System Name</li> <li>- Run Date - YY/MM/DD</li> <li>- Run Time - HH:MM:SS</li> <li>- User Profile Name</li> <li>- IBM Supplied Profile</li> </ul>

# Monitoring Compliance and Vulnerabilities PowerSC Tools for IBM i

Security Services Delivery Team

# PowerSC Tools for IBM i

Tools / Feature	Function	Benefit
<b>Compliance Assessment and Reporting Tool</b>	Daily compliance dashboard report/s at LPAR, system or enterprise level	Enables compliance officer to demonstrate adherence to pre-defined security policies
<b>Security Diagnostics</b>	Reports detailing security configuration settings and identifying deficiencies	Reduces operator time involved in remediating security exposures
<b>Privileged Access Control</b>	Controls the number of privileged users	Ensures compliance with industry guidelines on privileged users
<b>Secure Administrator for SAP</b>	Manages and controls access to powerful SAP administrative profiles	Eliminates sharing of SAP administrative profiles with enhanced security auditing
<b>Access Control Monitor</b>	Monitors security deviations from application design	Prevents user application failures due to inconsistent access controls
<b>Network Interface Firewall for IBM i Exit Points</b>	Controls access to Exit Point interfaces such as ODBC, FTP, RMTCMD, etc	Reduces threat of unauthorized security breach and data loss
<b>Audit Reporting</b>	Consolidates and reduces security audit journal information	Simplifies audit analysis for compliance officer and/or auditors
<b>Certificate Expiration Manager</b>	Simplifies management of digital certificates expiration	Helps operators prevent system outages due to expired certificates
<b>Password Validation / Synchronization</b>	Enhanced password validation and synchronization of IBM i accounts and SVRAUTE in the estate	Assures security officer that passwords and profiles consistently comply to objectives
<b>Single Sign On (SSO) Suite</b>	Simplifies implementation of SSO and password synchronization	Reduces password resets and simplifies end user experience
<b>Encryption Suite</b>	Simplifies implementation of cryptography using IBM i operating system capabilities	Helps application developers meet data security standards and protect critical data

**PowerSC Tools for IBM i is a service offering from IBM Systems Lab Services**

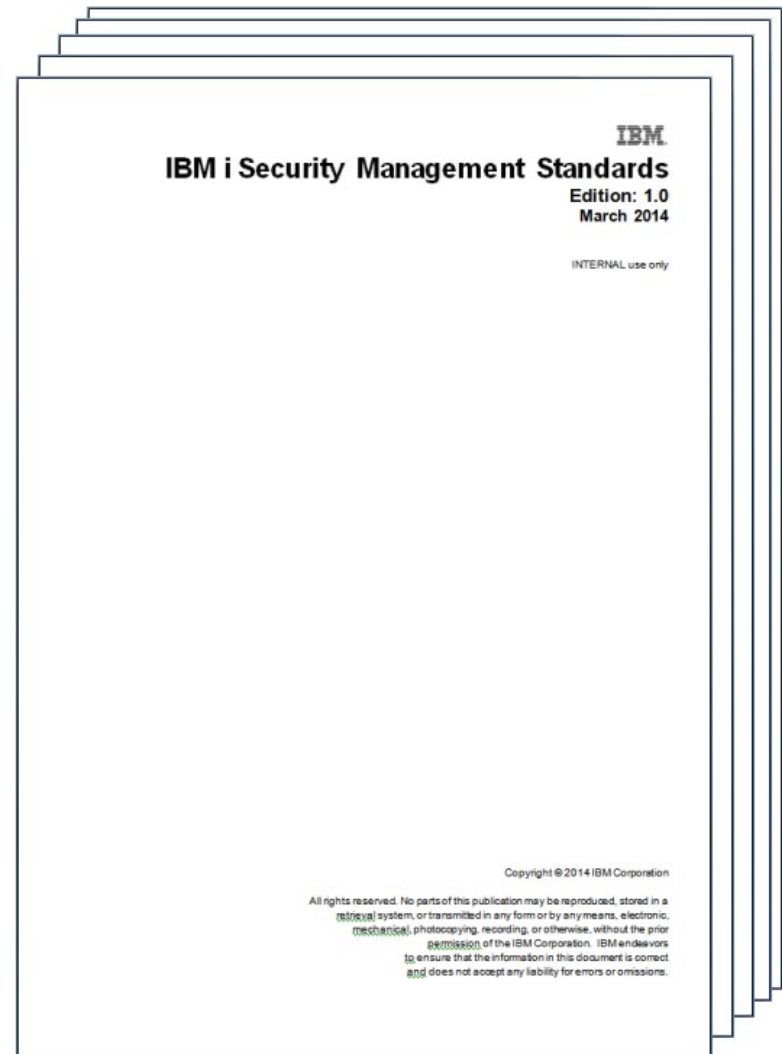

“Some organizations will be a target **regardless** of what they do, but most become a **target because** of what they do (*or don't do*)”

# Compliance Monitoring – Compliance to What?

## Company Policy and/or Standards

These should define how systems should be built, maintained, monitored, and interacted with by its custodians and users. Another way of thinking about it, they are a Service Level Agreement (SLA) between Owners, Management and the people they have hired to “work” the business. Owners and Management derive a “sense of security” knowing that its employees are managing the business according to this agreement. Owners and Management must be involved in the creation and maintenance of these documents. Compliance monitoring then is simply demonstrating that the employees (and management) are doing what they have been hired to do.

# Compliance Monitoring – Who Should Care?

- § **Business and Information Owners** – must be assured that the information and brand reputation of the business is protected
- § **Chief Security Officer (CSO)** – as custodian of the business and information owners, must answer for risks present on the system and that they are being managed to an acceptable level
- § **Security Administrators** – must insure that access is implemented appropriately as designed
- § **Compliance Officer** – must insure that the IT operations comply to corporate rules and regulations as well as industry and government regulations
- § **Operations Managers** – must insure the correct policies/standards are in place and being followed
- § **Application Developers** – must insure applications are being designed and placed in production correctly with sufficient controls to prevent inappropriate access
- § **Everyone** – adherence to policy insures the continuity of the business

## Compliance Monitoring – Inhibitors

- § Security setup inherited from the past - previous owners / application designers no longer are available
- § For many IBM i IT departments, security is performed by an individual with multiple responsibilities – operations, administration, programming, etc.
- § Security implementation “how to” is often not understood, is neglected or not monitored due to time constraints.
- § Security policies/standards often do not exist. If they do, monitoring of compliance to the policy is not done or understood and deviation from the policies/standards across the enterprise is unknown.
- § How do you measure security? What are Key Risk Indicators (KRI) ? How do I prove due diligence to security monitoring?
- § Gathering of security information is time consuming and scattered in multiple places on the system. The analysis of this data or monitoring of security changes is often dated by the time it is read.
- § Is my data safe?
- § Is my brand and/or reputation safe?
- § Is my job safe?

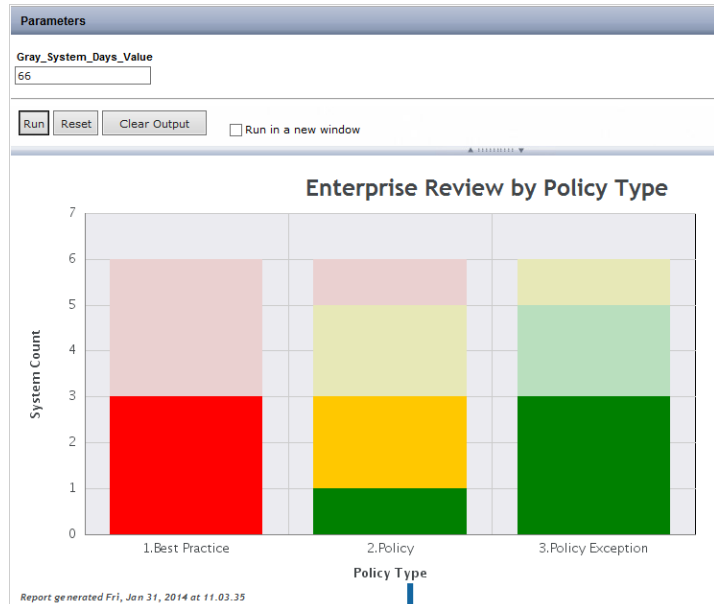

# Compliance Monitoring – Measuring Security

- § “If you can’t measure it, how can you improve or fix it ?”
- § Provide evidence that risk is being managed according to enterprise defined risk thresholds empowering Senior Management to make informed risk management decisions on where best to allocate resource.
- § **REQUIREMENTS:**
  - Centralized view of Security Compliance status across the enterprise
    - No access to remote machines required
    - Maintain segregation of duties
    - Provide management visibility, meaningful reports that drive action
  - Customizable Control Tests
    - Measurable Results
    - Ability to define Key Risk Indicators (KRI’s)
    - Traceability back to Security Standards and Company Policies
  - Dashboard Style Reporting
    - Red, Yellow (Amber), Green (RAG) Metrics
    - ‘Clickable’ reports – to drill down to the issue
    - Trending – to measure improvements (hopefully) over time

# Compliance Assessment and Reporting Tool

# Compliance Assessment and Reporting Tool

## Application to Provide Dashboard Customization

Policy Range Reporting Customization 2/04/14 00:59:18 CTCV71

Priority Level	Policy Range Definition		Exception Range Definition	
	Minimum GREEN %	Minimum YELLOW %	Minimum GREEN %	Minimum YELLOW %
HIGH Priority:	<u>0400</u>	<u>0300</u>	<u>0300</u>	<u>0100</u>
MEDIUM Priority:	<u>0400</u>	<u>0300</u>	<u>0300</u>	<u>0100</u>
LOW Priority:	<u>0400</u>	<u>0300</u>	<u>0300</u>	<u>0100</u>

Values include one decimal position. 0855 = 85.5%

This panel is used to define the percentages applied to dashboards and reports for calculating the overall GREEN YELLOW RED score for each of the HIGH, MEDIUM and LOW Priority Policy and Policy Exception items. RED scores are derived as the percentage of scored items for a priority level that are less than the minimum YELLOW percentage.

# Questions

# PowerSC Tools for IBM i

- ü ***Simplifies management and measurement of security & compliance***
- ü ***Reduces cost of security & compliance***
- ü ***Improves detection and reporting of security exposures***
- ü ***Improves the audit capability to satisfy reporting requirements***

## ***IBM Lab Services offerings for IBM i security:***

- ü ***IBM i Security Assessment***
- ü ***IBM i Single Sign On Implementation***
- ü ***IBM i Security Remediation***
- ü ***IBM i Encryption***

<b>PowerSC Tools for IBM i</b>	<b>Benefits</b>
Compliance Assessment Tool	Demonstrate adherence to pre-defined security policies
Security Diagnostics	Reduces operator time involved in remediating exposures
Privileged Access Control	Ensures compliance with guidelines on privileged users
Secure Administrator for SAP	Eliminates sharing of SAP administrative profiles
Access Control Monitor	Prevents user application failures due to inconsistent controls
Network Interface Firewall	Reduces threat of unauthorized security breach and data loss
Audit Reporting	Simplifies audit analysis for compliance officer and/or auditors
Certificate Expiration Manager	Prevents system outages due to expired certificates
Password Validation	Ensures user passwords are not trivial
Single Sign On (SSO) Suite	Reduces password resets and simplifies user experience
Encryption Suite	Helps meet data security standards and protect critical data

**PowerSC Tools for IBM i is a service offering from IBM Systems Lab Services**

**For more information on PowerSC Tools for IBM i offerings and services, contact: Terry Ford [taford@us.ibm.com](mailto:taford@us.ibm.com) Practice Leader, IBM Systems Lab Services Security**

# IBM Systems Lab Services and Training

## Our Mission and Profile

- § Support the IBM Systems Agenda and accelerate the adoption of new products and solutions
- § Maximize performance of our clients' existing IBM systems
- § Deliver technical training, conferences, and other services tailored to meet client needs
- § Team with IBM Service Providers to optimize the deployment of IBM solutions (GTS, GBS, SWG Lab Services and our IBM Business Partners)

## Our Competitive Advantage

- § Leverage relationships with the IBM development labs to build deep technical skills and exploit the expertise of our developers
- § Combined expertise of Lab Services and the Training for Systems team
- § Skills can be deployed worldwide to assure client requests can be met

### Successful Worldwide History

- 18 years in Americas
- 10 years in Europe/Middle East/Africa
- 6 years in Asia Pacific

Power Systems

System x & BladeCenter

System Storage

IT Infrastructure Optimization

Data Center Services

Training Services

## Leverage the skills and expertise of IBM's technical consultants to implement projects that achieve faster business value

- § Ensure a smooth upgrade
- § Improve your availability
- § Design for efficient virtualization
- § Reduce management complexity
- § Assess your system security
- § Optimize database performance
- § Modernize applications for iPad
- § Deliver training classes & conferences

# APPENDIX

## Prerequisites – Central Server

### § IBM i operating system version 7.1 or above

- Option 1 - Extended Base Support
- Option 2 - Online Information
- Option 3 - Extended Base Directory Support
- Option 12 - Host Servers
- Option 13 - System Openness Includes
- Option 14- GDDM
- Option 26 - DB2 Symmetric Multiprocessing (**OPTIONAL**)
- Option 29 - Integrated Server Support
- Option 30 - QSHELL
- Option 31 - Domain Name System
- Option 33 - PASE
- Option 34 - Digital Certificate Manager
- Option 39 - International Components for Unicode

### § **5733WQE - DB2 Web Query Express v2.1** (Standard edition preferred - 5733WQS)

- Minimum 1 core license (for \*Base and Option 1)
- 2 Licensed users (Option 4) – see Notes page
- One Workbench License (Option 5)

## Prerequisites – Central Server (continued)

### § Pre-requisite program products:

- 5770DG1 - IBM HTTP Server for i
- 5761JV1 - IBM Developer Kit for Java (\*BASE and options 8 through 13)
- 5770NAE - IBM Network Authentication Enablement for i
- 5733SC1 - IBM Portable Utilities for i (\*BASE and OpenSSH, OpenSSL, zlib)
- 5770TC1 - IBM TCP/IP Connectivity Utilities for i

### § Pre-requisite PTFs (as of January 2015):

		<u>V7R1</u>	<u>V7R2</u>
-	Cumulative PTF Package SF99710	14283	14276
-	SF99709 Group HIPER	129	22
-	SF99708 Security Group	35	9
-	SF99707 Technology Refresh	9	1
-	SF99701 DB2 Group	32	1
-	SF99647 DB2 Web Query Hot Fix	9	9
-	SF99572 Java Group	19	4
-	SF99368 HTTP Group	31	5
-	SF99367 TCPIP Group	8	1

## Prerequisites – Remote Systems

- § IBM i operating system version 5.4 or above with v7.1 Central, or
- § IBM i operating system version 6.1 or above with v7.2 Central
- § Compliance Assessment and Reporting Tool - Remote Agent

# Special notices

This document was developed for IBM offerings in the United States as of the date of publication. IBM may not make these offerings available in other countries, and the information is subject to change without notice. Consult your local IBM business contact for information on the IBM offerings available in your area.

Information in this document concerning non-IBM products was obtained from the suppliers of these products or other public sources. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

IBM may have patents or pending patent applications covering subject matter in this document. The furnishing of this document does not give you any license to these patents. Send license inquires, in writing, to IBM Director of Licensing, IBM Corporation, New Castle Drive, Armonk, NY 10504-1785 USA.

All statements regarding IBM future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only.

The information contained in this document has not been submitted to any formal IBM test and is provided "AS IS" with no warranties or guarantees either expressed or implied.

All examples cited or described in this document are presented as illustrations of the manner in which some IBM products can be used and the results that may be achieved. Actual environmental costs and performance characteristics will vary depending on individual client configurations and conditions.

IBM Global Financing offerings are provided through IBM Credit Corporation in the United States and other IBM subsidiaries and divisions worldwide to qualified commercial and government clients. Rates are based on a client's credit rating, financing terms, offering type, equipment type and options, and may vary by country. Other restrictions may apply. Rates and offerings are subject to change, extension or withdrawal without notice.

IBM is not responsible for printing errors in this document that result in pricing or information inaccuracies.

All prices shown are IBM's United States suggested list prices and are subject to change without notice; reseller prices may vary.

IBM hardware products are manufactured from new parts, or new and serviceable used parts. Regardless, our warranty terms apply.

Any performance data contained in this document was determined in a controlled environment. Actual results may vary significantly and are dependent on many factors including system hardware configuration and software design and configuration. Some measurements quoted in this document may have been made on development-level systems. There is no guarantee these measurements will be the same on generally-available systems. Some measurements quoted in this document may have been estimated through extrapolation. Users of this document should verify the applicable data for their specific environment.

Revised September 26, 2006
