Abstract

- In this session the latest features are covered
- Mostly by a demonstration
- Power Server VUG last did **PowerVC** March 2014
- LOTS of addition features since then
- Some experience of PowerVC is assumed
-- or --
watch my PowerVC YouTube videos for the basics

LinkedIn Group: "PowerVC Group"

Jay has detailed many features which are high on the priority list for this year ... or so.

The place for discussion, hints and tips & requesting new features.
Resent topics include warm standby for HA and backups/ recovery

PowerVC Session Summary

PowerVC Standard Edition for PowerVM

1. Enormous reduction in SysAdmin man-power
2. Faster & consistent VM creation
3. Full life-cycle of a VM at two or three clicks
4. Manage a resource pool – not individual machines
5. Master Images & Templates – define your standard configs

Added benefits from **Shared Storage Pools** features

1. Enormous reduction in man-power
2. Independence from underlying SAN technology & team!
3. Sub-second virtual disk create & assign & snapshot
4. Autonomic disk mirrors & re-silver with zero VM effort
5. Mobility (LPM) ready by default
6. Now Tiers – disk for different uses

SSP Image Capture and then Deploy it

- Capture VM → makes a full copy of the SSP LU (virtual disk)
- Deploy Image → all the VM's are linked Clone LU's

- Linked Clones written changed chunks (1MB) via copy on write

PowerVC Architecture – Standard → HMC

Standard X LAN Switch

NPIV SSP

Pricing

Pricing Stand Alone

- ~~PowerVC Express Edition is \$60 per managed core for Small tier machines controlled by IVM~~
- PowerVC Standard Edition is \$80 / \$120 / \$160 per managed core for Small/Medium/Large machines controlled by HMC

PowerVC included in

- SWMA for SmartCloud Entry Bundle in Power (5765-SB3)
- SWMA for AIX Enterprise Edition
- SWMA for System Director VMControl
- SWMA for System Director Standard Edition or Enterprise Edition

These List prices are in US Dollars on 8th Oct 2013. They may be different in other countries or not available. Please ask your IBM Representative for a quote in your country.

SWMA = Software Maintenance

PowerVC

Power VC 1.2.2 → Q4 2014

- **Additional storage**
 - Classic vSCSI whole disk/LUN not LV (in addition to NPIV & SSP)
 - IBM XIV
 - EMC VMAX/VNX
 - Originally only SVC family like my **V7000**
 - **Cisco SAN switches** in addition to Brocade
- **IBM i**
- **PowerVM Deploy Image Export (CLI) & Import (GUI)**
- **Add/Remove virtual network after deploy**

- **Maintenance Mode** → Machine Evacuation
- **IP v6 support**
- **Network IP Address Pools**
- **Linux LE on PowerKVM (like Ubuntu 14 + 15)**
- **Further scaling 20 hosts + 2000 VMs**

PowerVC 1.2.3 → Q2 2015

- Latest OpenStack in PowerVC based **RHEL7.1** LE or **BE**
- Enhanced Storage
 - **Multi disk capture and deploy**
 - **Shared disk** for PowerHA
 - SVC mirroring
 - IBM SDDPMC & EMC Powerpath in VIOS
- New client VM support
 - RHEL 7.1 LE, SLES 12 LE and Ubuntu 15.10 (14.04.03)
- New Features
 - New **deploy placement policies**: CPU Util or CPU/RAM capacity
 - **Affinity** and **Anti-affinity**
 - **Host Groups** for similar HW or use placement
 - **Dual HMC** aware
 - Manual **Simple Remote Restart** (POWER8 only)
 - AIX 6 & 7 **Cloud Init**
- Scale to 30 machines and 3000 VM's

New features → later in 2015

1.2.3.2 (September)

- Support for PowerVM Multiple **Shared Processor Pools**
- **Data volume resize (larger)**

1.3.0 (December) base on OpenStack “Liberty” release

1. **DRO**: New policy-based to automated the **dynamic optimisation** of systems = load balance (via LPM or move CPU Activation)
2. New storage capabilities, including **IBM DS8000** both NPIV & vSCSI
3. PowerKVM – iSCSI boot
4. Enhanced **monitoring** & security
5. Exploit PowerVM NovaLink, which improves scaling & performance

1.3.0 is **SSP5 Tiers unaware** but co-operates

- Deploy SSP clone to same tier as OS master image
- Deploy new virtual disks to Default Tier
- If that is not right, SSP admin can use `lu -move ...` to change Tier

Future features for 2016

Major new functions are in the plan – lots of WOW factor

If you want to know more:
attend Technical Universities in Q2 in EMEA = Rome

The message for PowerVC users is
“Expect to upgrade your PowerVC every six months
as you will NOT want to miss out on new features”

This includes the regular fixes

DEMO

Best Practice is a work in progress

1. Think: Cattle not Pets!
2. All machines = same config (cluster)
3. Get PowerVC to do the work (not yourself)
 - PowerVC can do the grunt work
 - PowerVC can decide where to place a new VM
 - PowerVC can decide where migrate a VM
 - PowerVC can decide when to load level machines
4. Get a clean set of Deploy Images
5. Set up VM templates S / M / L
6. Automate & Go home early
7. Don't try to force PowerVC to your old bad practices
 - Do it the PowerVC way
 - Stop using the HMC

Are you keeping up to date?
