User's Guide

Release 6.0

Note!

Before using this information and the product it supports, be sure to read the general information under "Notices" on page v.

First Edition, September 1995

This edition applies to Release 6 Modification Level 0 of IBM Application Program Driver/400 Version 3 (5716-PD1) and to all subsequent releases and modifications until otherwise indicated in new editions or technical newsletters. See the Summary of Changes for the changes made to this manual. Make sure you are using the correct edition for the level of the product.

Order publications through your IBM representative or the IBM branch office serving your locality. Publications are not stocked at the address below.

IBM welcomes your comments. A form for readers' comments may be provided at the back of this publication, or you may address your comments to the following address:

IBM Anwendungssysteme GmbH Information Development, Department 5160 Postfach 72 12 80 30532 Hannover Germany

When you send information to IBM, you grant IBM a nonexclusive right to use or distribute the information in any way it believes appropriate without incurring any obligation to you.

About This Book

This book explains how to use the IBM* licensed program Application Program Driver/400 Version 3 (program number 5716-PD1), referred to as APD/400 in the following.

How This Book Is Organized

This book consists of the following chapters:

Chapter 1, "Introduction to APD/400" describes standard as well as new features of APD/400, and provides a list and description of new tasks.

Chapter 2, "Using Online Help Information" tells you what types of online help information are available in APD/400, and explains how to access this information.

Chapter 3, "APD/400 Displays" provides information about the layout and use of APD/400 displays. All fields on standard APD/400 displays, function keys, menu bars, pull-down menus, menu windows, and pop-up windows for select functions are described in detail.

Chapter 4, "Using APD/400" describes in detail how to use APD/400 services, such as selecting your work environment, start program, personal menu, and working with batch jobs.

Chapter 5, "Maintaining Multiple APD/400 Tasks" explains how to start and end multiple APD/400 tasks, in particular how to add, select, and delete tasks.

Appendix A, "Pull-Down Menus" shows the layout of pull-down menus, and provides a short description of options available on each pull-down menu.

Appendix B, "Menu Window Cascades" shows examples of menu window cascades both with and without a menu bar.

The "Glossary of Terms and Abbreviations" defines terms used in this book.

The "Bibliography" provides a list of publications related to APD/400.

An index helps the user locate information in the book.

Who Should Read This Book

This book is designed for end users working with applications on the Application System/400* (AS/400*) system, who are not necessarily AS/400 experts.

End users work only with the control part of APD/400 and its related functions. You are not required to perform administrative tasks.

Chapter 1. Introduction to APD/400

APD/400 is a menu-driven system that integrates multiple applications, and functions common to those applications, in a single processing environment. Additional features and services enable you to customize APD/400 to your own specific requirements.

These features and services include:

Initial Menu Selection

You can specify an initial menu to be displayed after you sign on to APD/400. The system then displays that menu without intermediate menus.

Personal Menu Selection

You can create your own personal menu combining the tasks you most often use.

Expert Codes

You can use expert codes to move directly to menus and applications. This saves time, because you bypass intermediate menus and avoid having to sign off and on. It is no longer necessary to prefix an expert code with the ID of an application when that expert code starts a function in an application other than APD/400.

Other Features

Some other important APD/400 features are:

Menus in Windows

You can display menus on a full screen or in windows. Several windows are displayed in a cascade.

Menu Bars

All menus contain menu bars from which you can select choices. Users can decide to switch menu bars on or off. You can still use expert codes as before.

OfficeVision/400* Support

You can now access OfficeVision/400 features from all installations.

Pull-Down Menus

A pull-down menu is available for every choice on a menu bar. Pull-down menus provide a list of tasks to select.

Customized Menus

Users can determine how full-screen menus and windows appear. You can choose the color and style of various components of displays and windows, including menu bars, title area, window border, menu choice area, and command line.

Multilingual Support for Applications

APD/400 supports applications that are enabled for multiple languages. Under APD/400, an application can be used in different languages simultaneously.

© Copyright IBM Corp. 1988, 1995

Multilingual Support for APD/400

APD/400 itself is enabled for multiple languages, and can be used in different languages simultaneously.

For a general introduction to APD/400 functions and services, refer to the IBM Application Program Driver/400 Version 3: General Information manual.

Chapter 2. Using Online Help Information

APD/400 provides general and specific help information for displays and for fields on displays.

Select the About help option from the Help pull-down menu, or enter expert code HELPHELP to produce the About Help information display. This display explains how to retrieve help information from the APD/400 online information system.

In APD/400, you can access online help information from every active display. Help is cursor sensitive. Different helps are displayed for different cursor positions. What kinds of help are available, and how to display help information is explained in the following.

Press F1 (Help) to produce a help display. There is also a Help key on most keyboards. In APD/400, this key has the same effect as F1 (Help).

Help for Menus

For help information about menus, do the following:

- Place the cursor on a menu option to display help for that option.
- Place the cursor on the *Selection or expert code* prompt to display general help in the use of menus.
- Place the cursor anywhere else on the menu to display general help for the active menu.

Note: These rules apply to full-screen menus and menu windows.

Help for the Menu Bar

For help information about the menu bar, do the following:

- Place the cursor on a menu-bar choice to display help for that choice.
- Place the cursor on the border of the menu bar display, or between the menu bar options for general help in the use of menu bars.

Help for Pull-Down Menus

For help information about pull-down menus, do the following:

- Place the cursor in the input field in the top left corner to display general help for pull-down menus.
- Place the cursor on any option of a pull-down menu to display help for that option. This can be a help display that belongs to an application.
- Place the cursor anywhere else on the pull-down menu to display general help for the active pull-down menu.

© Copyright IBM Corp. 1988, 1995

Help for Functional Displays

On functional displays, APD/400 provides *item-specific* and *extended* help information. To receive item-specific help, place the cursor as follows:

- On a data entry or an output field, to receive help for that field.
- In the function key area, to receive a description of how to use the function keys. On some APD/400 displays, the description of function keys is part of the general description of the display.

Extended help provides a general description of the display and a description of all items on the display. Extended help is displayed when:

- The cursor is not in any specific area of the display, such as on the display title or the instruction line.
- You press F2 (Extended help) on the help display of an item-specific help.

Help for Messages

To receive help for messages that are shown on the bottom line of displays, place the cursor on the message, and press F1 (Help).

Using the Search Index

Press the F11 (Search index) on any APD/400 help display to search for information that is not directly related to the currently active APD/400 display. You are prompted to enter some key words that the system uses to find information.

For example, if you are on the Schedule a Batch Job display, and you do not know what the word *batch* means, press F11 (Search index), and type the word batch. The AS/400 help system then displays a list of help information that matches the word *batch*. Select the information you want from this list.

Additional information about how to use the AS/400 help system is available when you press F1 (Help) on any APD/400 help display.

Chapter 3. APD/400 Displays

All APD/400 displays have a standard layout, as shown in Figure 1. Options and responses vary according to the task.

```
(Selection or Expert Code Area)

(Function Keys)

(Menu Bar)

(Installation ID)
(Data Set ID)
```

Figure 1. Standard APD/400 Display

Information Fields

Two lines at the top of the display are reserved for fields that describe the task, as in Main Menu, and when applicable, the expert code of the task, the ID of the data set, and the ID of the installation.

Display Area

Main display area for task options, prompts, and responses.

Selection or Expert Code Area

Lines 20 and 21 show the prompt and command line where you enter a selection or an expert code. This area appears on all menu displays.

Function Keys

Line 23 shows function keys available for that specific display. If all available function keys do not fit on one line, press F24 (More keys) to display additional function keys.

Messages

Line 24 is reserved for AS/400 system and APD/400 messages.

Menu Bar

Lines 1 and 2 show the menu bar, when it is in use. Users can decide whether to use menu bars or not.

A displayed menu bar always belongs to the current full-screen menu.

© Copyright IBM Corp. 1988, 1995

Information Fields

Fields on APD/400 displays provide the following information:

Expert Code

The name of your application and the expert code of the task or menu currently displayed, separated by a slash (I), as in APD/MAIN.

Task or Menu Description

A short description of the task or menu you are using, as in Main Menu.

Installation ID

The identification of the installation where you are working.

Data Set ID

The identification of the application data set you are using.

Display Area

An APD/400 menu display contains a list of task options, each preceded by a number. The following command line is displayed below the list of options:

Selection or expert code

To select the required task option, either:

- Place the cursor on the option line, and press Enter.
- Type the option number on the command line, and press Enter.
- Type the expert code of the task option on the command line, and press Enter.
 You can use F11 as a toggle key to reveal or conceal the expert codes for each option.

Note: Remember that you must always press Enter to confirm an entry.

Some APD/400 menu displays consist of more than one page. Use F8 or the Page Down key to reach menu options on succeeding pages.

The option numbers shown on the menus in this manual can differ from those you see on your screen if your APD/400 administrator has made changes. Some options are not displayed because you are not authorized to process the tasks represented by those options.

Selection or Expert Code Area

When you want to process an application task under APD/400, you activate that task by working your way through APD/400 and application menus until you reach the menu containing the task. On that menu, you can either place the cursor on the option line next to the task and press Enter, or you can type the option number of the task you want to process on the command line and press Enter.

Once you are used to starting tasks under APD/400 control, you can use an expert code to shorten the time required to access and start a task.

Each task that can be processed from an APD/400 or an application menu has its own expert code, usually shown in the upper-left corner of the display that is in view while the task is being processed. The more you process certain tasks under APD/400, the easier it is to remember the expert codes of those tasks.

When you know the expert code of the task you want to process, you do not need to access the menu containing the task option. Instead, you can activate the desired task from any menu shown on the screen. Just type the expert code on the command line of the menu, and press Enter. The task is processed immediately.

Finding Expert Codes

You can find expert codes for the tasks you want to process as explained in the following.

Press F4 (Prompt) on any APD/400 or application menu to produce the Select Expert Code display. This display shows the list of expert codes for all tasks you are authorized to process, a short description of each task, the ID of the application to which each task belongs, and at the left, an *Option* column in which you can select an expert code directly from the display. Figure 2 shows an example of the Select Expert Code display.

```
Options 0

       ADMPMU
                  Administer Personal Menu
                                                               APD
       ADMSTRPGM Administer Start Program
                                                              APD
                                                                 More...
  F3=Exit F12=Cancel F17=Position to F24=More keys
```

Figure 2. Select Expert Code

From this list of expert codes, you can do the following:

• To go directly to a task that is farther down the list and therefore not visible, press F17 (Position to). In the Position the List window, type the first letters or the name of the task and press Enter. If APD/400 cannot find the task you are looking for, the cursor moves to the task that is next in alphabetical order to the one you specified.

Press F18 (Subset) to produce the Expert Code Subset window. Enter a
search string in one or more of the three fields to display a smaller list of expert
codes, as explained in the description of F18 on page 9. You then see a list of
expert codes matching your search string.

Note: On any APD/400 or application menu, press F11 (Expert code) to reveal expert codes for tasks you are allowed to process. Press F11 again to conceal the expert codes.

An expert code can exist in more than one application, and represent different functions. When you enter an expert code to start a task, the system first searches APD/400 and then all other applications to find that task. It may sometimes be necessary to prefix the expert code of a task with the ID of the application to which it belongs, as in XXX/MAIN, where XXX is the ID of the application and MAIN is the expert code of the task you want to start.

Function Keys

Line 23 is reserved for the display of available function keys. Each option has a number and a brief description, for example, F3 (Exit). Use the F1 key to display help texts.

The most commonly used function keys are described in the following:

F1=Help

Press F1 to display help information on various subjects, depending on the position of the cursor. For example, when the cursor is placed on a task (menu option), help information explains that task. When the cursor is in free space, you receive general information about the menu that is currently displayed.

Note: You can also press the Help key instead of F1, if this key is available on your keyboard.

F3=Exit

Press F3 to end a task and return to the initial menu. If you are already at the initial menu, you return to the main menu.

F4=Prompt

Press F4 to produce the Select Expert Code display, showing a list of all expert codes that you are authorized to use.

F5=Refresh

Press F5 to show the revised display after you have made a change.

F7=Up, F8=Down

Press F7 or F8 to move backwards or forwards through a display. Menus can contain up to 99 options. Where there are more options than the existing space can display, you can move the display up or down.

When you see More... on line 19 of the screen, press F8 to display the next list of options. Continue to do this until you see Bottom.

To go back through the list of options, press F7. You can also use the Page Up and Page Down keys to move backwards and forwards on a display, if these keys are available on your keyboard.

F9=Retrieve

Press F9 to retrieve the last expert code you entered. Press this key repeatedly to retrieve all previously entered expert codes.

F10=Action

Press F10 as a toggle key to activate the menu bar from the main menu, or to deactivate the menu bar and return to the main menu. This function key is available only when menu bars are switched on. You can also use F12 to deactivate the menu bar.

F11=Expert Code (Options)

Press F11 as a toggle key to reveal the expert codes of options on the menu, or to display the options without expert codes.

F12=Cancel

Press F12 to cancel a function and return to the previous display.

F17=Position To

Press F17 to display the Position the List window. Specify either the complete name of the entry or the initial characters of the name, and press Enter. Remember that if that entry cannot be found, the cursor moves to the entry (expert code, application ID, or data set ID) that is next in alphabetical order to the one you specified.

Specify *TOP to move the cursor to the first entry, or *BOT to move the cursor to the last entry on the list.

F18=Subset

Press F18 to display a smaller portion of a large screen format or file.

Fields for selecting subsets begin with an asterisk (*). To select a subset, enter a search string in input fields starting with an asterisk. Start typing at the asterisk. Press Enter when you have finished typing the search string. The next display shows all entries matching the specified search string.

If you press Enter without entering a search string, the previous display reappears.

Enter a search string in any of the following ways:

Input Result

A Displays all entries with entry A in the corresponding field.

A* Displays all entries beginning with A.

In some administrative functions, the following ways of entering search criteria are not available:

*A Displays all entries ending with A. *A* Displays all entries containing A.

*A*A Displays all entries ending with A and having another A at any

other position.

Subset Selection for Texts

Asterisks in the text field have no special meaning. Enter search criteria in any of the following ways.

Input	Result
Admin	If this entry is inserted in the text field, all entries containing
	Admin are displayed. You do not need asterisks in the text field.
Work S	If this entry is inserted in the text field, all entries containing Work
	followed by an S anywhere in the text are displayed. Entries with
	an S followed by Work are not displayed.

F23=Set Initial Menu

Press F23 to set the active menu as initial menu when you sign on to APD/400.

F24=More Keys

Press F24 to display additional keys that are available, but cannot be displayed on the current screen.

Messages

AS/400 system and APD/400 messages are displayed on the message line at the bottom of the display. These messages are usually self-explanatory. However, if you need further information, place the cursor on the message and press F1 (Help).

There are message types:

- Information messages
- · Confirmation messages
- · Error messages.

Menu Bars

APD/400 now includes menu bars and pull-down menus to make it easier for you to navigate through APD/400 and applications installed under APD/400.

APD/400 can be used with or without menu bars. The default setting for the menu bar is on. However, users can switch the menu bar off and on again using the SWTMNUBAR (Switch Menu Bar) command. The switch is not effective immediately. You must leave APD/400 using End Task, then start APD/400 again for the switch to take effect.

The No menu bar available message appears at the bottom of your display when you start APD/400 and no menu bar has been defined for the menu, the application, or the APD/400 application.

Figure 3 on page 11 shows the menu bar at the top of the main menu display.

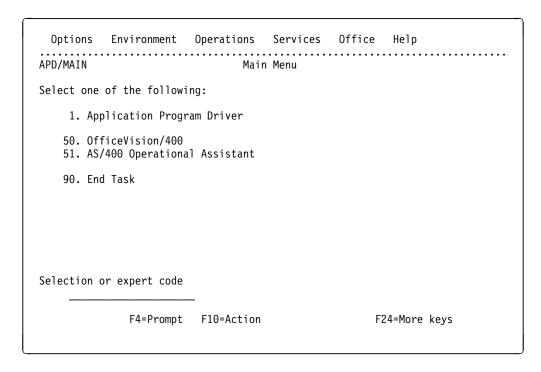

Figure 3. Menu Bar

Press F10 (Action) to activate the menu bar. F10 (Action) moves the cursor to the menu bar so that you can select a menu-bar choice. Press F10 again or F12 to deactivate the menu bar and return to your starting point on the current menu.

In a full screen menu you can also activate or deactivate the menu bar by moving the cursor with the tabulation or the arrow keys from the selection or expert code field to the menu bar, or back from the menu bar to the selection or expert code field.

Menu Bar Description

The following describes the appearance, maintenance, and contents of menu bars:

- The color of menu-bar choices depends on the current color setting in the application to which the menu bar belongs. This color is used for unselected choices.
- The color of the menu-bar border depends on the current color setting of the window border in the application to which the menu bar belongs. Four border character sets, seven colors, and two attributes are available.
- Menu bars can contain a maximum of 6 choices. Choices are maintained using Administer Menus.

Activating Pull-Down Menus

Each menu-bar choice requires a pull-down menu from which to start a task. You cannot start a task from a menu bar. Only tasks for which the user is authorized are available on pull-down menus.

Use the TAB or arrow keys to place the cursor on one of the menu-bar choices. Press Enter to activate the pull-down menu.

When the pull-down menu appears, select an option in one of two ways:

- Type the number of the option in the option field. It is not necessary to press Enter.
- Place the cursor on an option, and press Enter.

```
Options 0
           Environment
                         Operations
                                       Services Office Help
                           _ 1. Printer output...

                         : 4. Send message...

    Application Progr: 5. Change password...
    6. Operation assist...

   50. OfficeVision/400 :....:
   51. AS/400 Operational Assistant
   90. End Task
Selection or expert code
              F4=Prompt
                        F10=Action
                                                     F24=More keys
```

Figure 4. Pull-Down Menu (Operations)

Place the cursor on the menu-bar choice Operations. Press Enter to produce the pull-down menu for Operations, as shown in Figure 4.

Pull-down menus appear directly beneath the selected menu-bar choice and can display a maximum of 9 options. The color defined for the application to which the menu bar belongs is used for all items (border, choices) on the pull-down menu.

To switch from one pull-down menu to another, move the cursor with the tabulator or arrow key to the required menu bar choice and press Enter.

Function Keys on Menu Bars and Pull-Down Menus

On menu bars, only F1 (Help), F10 (Action), and F12 (Cancel) are available. When you press F10 or F12 from the active menu bar, the menu bar is deactivated and control returns to the menu.

On pull-down menus, F1 (Help), F10 (Action) and F12 (Cancel) are also available.

When you press F10 (Action) on a pull-down menu, control returns to the menu.

After leaving the pull-down menu, the pull-down menu disappears.

Exception: If the menu bar was activated from a window, control returns to the menu bar. When you press F12 (Cancel) on a pull-down menu, control returns to the menu bar.

To return to the underlying display from a pull-down menu, press F12 (Cancel) to return to the menu bar, then press F12 (Cancel) again or F10 (Action) to return to your original starting point on the underlying menu. You cannot move the cursor directly to the underlying display and process functions there.

Menu Control

When a task selected from a pull-down menu has been processed, control returns to the underlying APD/400 menu. When you select a menu task from a pull-down menu, that menu is displayed and becomes the controlling menu.

Cursor-Sensitive Help

The help information you see depends on where the cursor is placed on the menu bar or pull-down menu. To receive general help for the menu bar and pull-down menu, press F1 (Help) when the cursor is on the menu bar border.

To receive specific help for a task in a pull-down option, press F1 (Help) with the cursor on that option when the pull-down menu is active.

Menu Windows

APD/400 now provides menus in windows. When more than one *menu window* is on the screen at the same time, windows are displayed in a cascade.

Users can decide whether to use menus in windows or not. If you decide not to use menus in windows, menus are displayed on the full screen as usual. Processing a task option from a menu window is exactly the same as processing that option from the usual full-screen menu.

The APD/400 administrator determines which of the existing APD/400 menus can be displayed in windows.

The default setting for menu windows is *on*. Use the new SWTMNUWDW (Switch Menu Window) command to switch menu windows on or off, or select option 1 (Menu windows on/off) from the pull-down menu for Options on the menu bar. This switch is effective immediately and does not require you to leave APD/400.

Figure 5 on page 14 shows the Administer Master Data menu in a window.

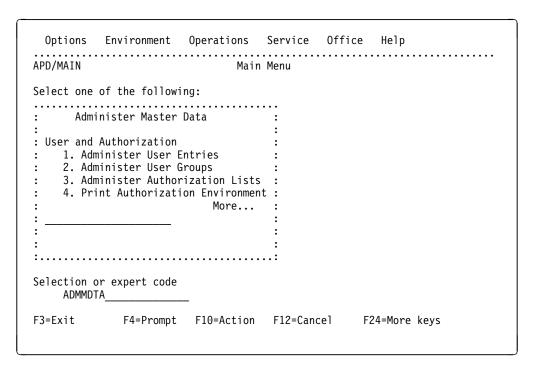

Figure 5. Menu Window

A menu window appears when you activate a menu that the APD/400 administrator has defined as a menu window, and menu windows are switched on.

The More... indicator is displayed in the lower right-hand corner of the window when a menu has more than 6 options. The Bottom indicator is displayed when you reach the end of the option list.

The Selection or expert code prompt is at the lower left and center of the window, on line 9.

It is possible to choose the color and style of the window border. Refer to the IBM Application Program Driver/400 Version 3: Administrator's Guide to find out how to do this.

Using Menu Windows

When you are using a menu window that has its own menu bar, you can produce that menu bar in one of two ways:

- Press F23 (Set initial menu) to set the menu that is currently displayed in a window as your initial menu. An initial menu is always displayed on the full screen.
- Ask your application administrator to change the display mode of that menu from window to full screen.

In a menu window, you can proceed in one of three ways:

- Place the cursor on a menu option, and press Enter.
- Type the number of a menu option on the command line, and press Enter.
- Type the expert code of any task on the command line, and press Enter.

When you activate a menu window, control transfers to that window. To switch control back to the underlying full-screen display, you must press F12 (Cancel) until the window disappears, and you reach the full-screen menu.

Use F10 (Action) on a menu window to transfer control to the menu bar on the full-screen display.

Pop-Up Windows for Select Functions

All select functions are now displayed in pop-up windows. These functions are as follows:

- · Select Installation
- Select Applications
- · Select Data Sets
- · Select Expert Codes
- Transfer to an Interrupted Task
- Select Printer
- · Select Languages

Windows for all select functions are similar to the window for Select Data Sets described in the following.

In the following example, illustrated by Figure 6 through Figure 9, the user has selected 3 Data Sets from the Environment pull-down menu, then pressed F17 (Position to) and F18 (Subset).

Figure 9. Subset Pop-Up Window

For detailed information about pull-down menus, menu windows, and window cascades, refer to Appendix A, "Pull-Down Menus" on page 47, and Appendix B, "Menu Window Cascades" on page 54.

Chapter 4. Using APD/400

This chapter describes APD/400 services and explains how to use them.

Starting APD/400

Some users go directly into APD/400 when they sign on to AS/400. Where this is not the case, proceed as follows:

- 1. Sign on to AS/400.
- 2. Type STRAPD on the command line of the AS/400 main menu.
- 3. Press Enter.

The system displays the APD/400 Main Menu, as shown in Figure 10.

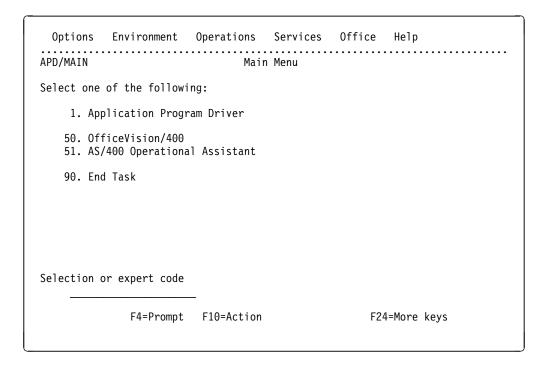

Figure 10. APD/400 Main Menu

Specify option 1 (Application Program Driver), or expert code APD. The system displays the APD/400 initial menu, which contains the functions you are authorized to use. Figure 11 on page 19 shows an example of an APD/400 initial menu.

Figure 13. Service Functions (Page 2)

Options that are not visible on the Service Functions menu can be seen and accessed only by authorized users.

The Service Functions menu offers the following options:

- 1. Administer Personal Menu
 - Select this option to create your own personal user menu, consisting of tasks you use most often.
- 2. Administer Start Program

Select this option to specify a program to run automatically whenever you sign on to APD/400.

- 3. Select Installation
 - Select this option to work on another installation.
- 4. Select Data Sets

Select this option to change to another data set.

- 5. Change Default User Profile
 - Select this option to change the default user profile, if you are authorized to do this.
- 6. Work with Scheduled Batch Jobs

Select this option to change batch jobs that you scheduled in APD/400.

7. Work with Canceled Jobs

Select this option to restart or remove interrupted batch jobs.

8. Work with Jobs

Select this option to work with Operating System/400* (OS/400*) user jobs.

9. Work with APD/400 Batch System

Select this option to display the state of the batch system.

10. Select Printer

Select this option to change the printer environment for a single job or task, or permanently.

11. Work with Printer Output

Select this option to work with all spooled files in OS/400.

12. Work with Messages

Select this option to display all AS/400 system and APD/400 related messages.

13. Command Line

Select this option to produce an AS/400 window, from which you can press F4 for a list of commands, or F9 to retrieve previous commands.

14. Select Languages

Select this option to specify a language priority list.

For further information contact your system administrator.

Selecting Your Working Environment

The Service Functions menu offers options to help you select and control your APD/400 environment. These options are as follows:

- Select Installation
- Select Data Sets
- Select Printer
- Administer Start Program
- Select Languages

Selecting an Installation

Your APD/400 administrator may have set up separate installations for test, education, and production environments.

If you are allowed to work on more than one installation, you can switch between installations that are available to you.

Select option 3 (Select Installation) from the Service Functions menu, option 1 (Installations...) from the Environment pull-down menu, or enter expert code SLTINS to produce the Select Installation display.

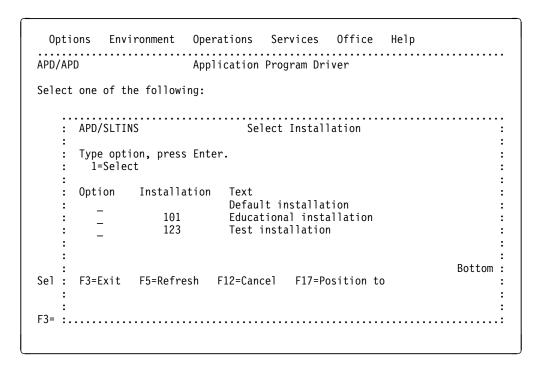

Figure 14. Select Installation

Figure 14 is an example of a Select Installation display, which shows a list of all installations on which you are authorized to work. Fields on this display provide the following information:

Installation ID of the installation Text Brief description of the installation

To select an installation, type 1 in the *Option* column next to that installation, and press Enter.

Selecting a Data Set

In APD/400, you can use various data sets within an application. This is useful for maintaining separate data for different companies, clients, or departments.

When you are using more than one data set at a time, you can switch between available data sets.

Select option 4 (Select Data Sets) from the Service Functions menu, option 3 (Data sets...) from the Environment pull-down menu, or enter expert code SLTDS to produce the Select Data Sets display.

Sel: F3=Exit F5=Refresh F12=Cancel F17=Position to F18=Subset
```

Figure 15. Select Data Sets

Figure 15 is an example of a Select Data Sets display, which shows a list of all data sets you are authorized to use. Fields on this display provide the following information:

Data set ID of the data set

Application ID of the application to which the data set belongs

Text Brief description of the data set

To select a data set, type 1 in the *Option* column next to that data set, and press Enter.

Selecting a Printer Environment

To select a print environment, select option 10 (Select Printer) from the Service Functions menu, option 5 (Printers...) from the Environment pull-down menu, or enter expert code SLTPRT to produce the Select Printer display.

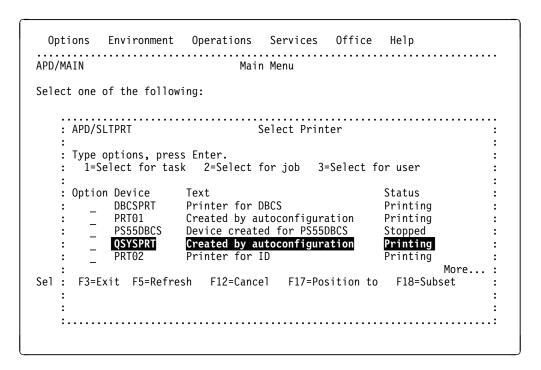

Figure 16. Select Printer

Figure 16 is an example of a Select Printer display, which shows a list of printers you are allowed to use. The current printer is marked in reverse image. Fields on this display provide the following information:

Device Identification of a printer Text Brief description of the printer Current status of the printer Status

To select a printer, type one of the following options in the Option column next to a printer, and press Enter:

- 1 = Select a printer for the next task to be processed. APD/400 resets the environment to the default printer when the task has been completed.
- 2 = Select a printer for the current session. APD/400 resets the environment to the default printer when you have signed off.
- 3 = Select the default printer. This printer becomes the default printer for all tasks or jobs until you use this option again to specify another printer as the default.

Selecting a Start Program

You can specify a start program to run whenever you sign on to APD/400. When your start program has finished running, APD/400 displays the initial menu.

To select a start program, select option 2 (Administer Start Program) from the Service Functions menu, or enter expert code ADMSTRPGM to produce the Select Start Program display.

```

                                                                           More...
F3=Exit F12=Cancel F18=Subset F24=More keys
```

Figure 17. Select Start Program

Press F24 (More keys) to see additional function keys that are available on this display.

Figure 17 is an example of a Select Start Program display, which shows a list of programs from which you can select a start program. Fields on this display provide the following information:

Current start program

Expert code of the program currently assigned to run when you sign on. If no start program has been selected, the word *NONE is displayed.

Expert code Expert code of the program.

Type Type of expert code (P, L, or C).

Text Brief description of the program.

Appl. Application to which the program belongs.

To select a program as your start program, type 1 in the *Option* column next to that program, and press Enter.

If you no longer require a selected start program, select expert code *NONE.

Multilingual Support for Applications under APD/400

When a user has set up a personal language priority list, APD/400 can do the following:

- Display help information in the language with the highest priority.
- Display helps and messages in a second language.

Selecting Languages

Each user can specify a list of languages in order of preference. This priority list is valid for OS/400, APD/400, and for all applications. To specify a language priority list, select option 14 (Select Languages) from the Service Functions menu, option 6 (Languages...) from the Environment pull-down menu, or enter expert code SLTLNG.

Select Languages shows a list of available languages that are used in at least one application. Using this list, you can rank as many as eight languages in order of priority to create your own working language list.

You need to do this only once, but you can change the priorities on the list at any time. Whenever you select an application that is available in a language on your list, you can use the application in that language.

Previously selected language priorities appear at the top of the language list. The first language on the list is your most preferred language.

Figure 18 is an example of a language priority list.

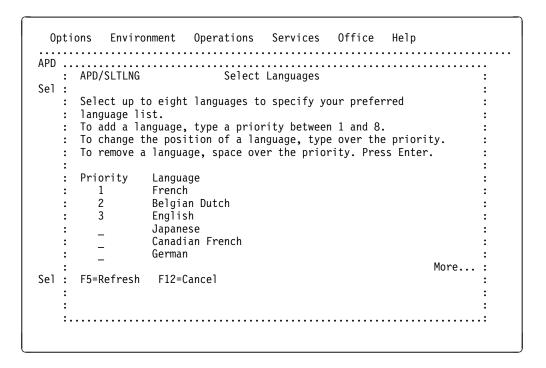

Figure 18. Select Languages

Selecting a Language for an Application

When tasks from different applications are included on an APD/400 menu, APD/400 selects a language to be used for the description of each task. APD/400 uses the user's language priority list to select a language from those available in the application.

The Select Language for Application window appears when APD/400 is required to display messages or helps, under the following conditions:

- · An application supports more than one language.
- You have not specified a language priority list.
- The application is not available in any language on your priority list.

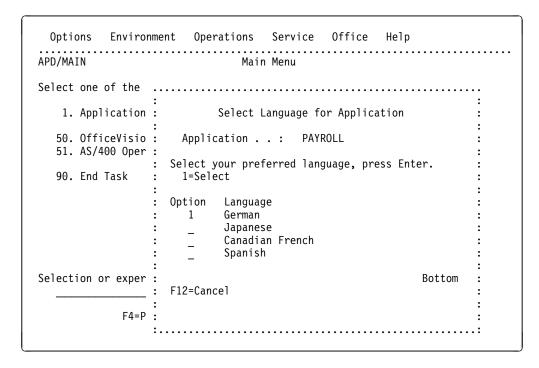

Figure 19. Select Language for Application Window

Figure 19 is an example of a Select Language for Application window. Fields in this window provide the following information:

Application Application for which a language must be selected.

Only the abbreviation of the application is displayed because APD/400 does not yet know in what language to display the description of the application.

Language List of languages available in the application.

In this pop-up window, you must select a language for the application. This selection is stored for future use, and is deleted as soon as you create your own language priority list.

Creating Your Own Personal Menu

Users may find it necessary or useful to combine the tasks they use most often into one menu. In APD/400, you can create a personal menu for each installation you are authorized to use.

To create your personal menu for the current installation, select option 1 (Administer Personal Menu) from the Service Functions menu, or enter expert code ADMPMU to produce the Administer Personal Menu display.

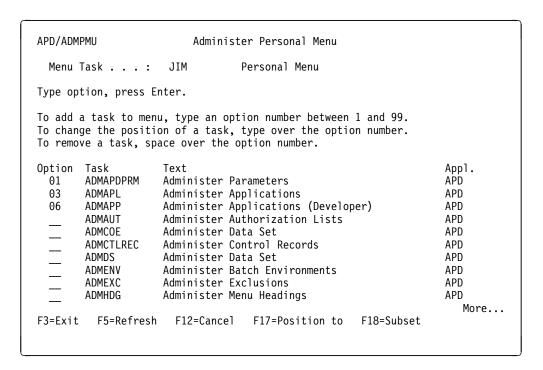

Figure 20. Administer Personal Menu

Figure 20 is an example of the Administer Personal Menu display, which shows a list of available tasks. From this list you can select tasks to change, add to, or remove from your personal menu. Fields on this display provide the following information:

Menu Task	Name of your personal menu, always your user ID
Task	List of tasks you are authorized to use
Text	Brief description of each task
Appl.	ID of the application to which the task belongs

The current numbers of selected tasks, if any, are displayed in the *Option* column. Selected tasks are always displayed at the top of the list, even when they do not match a subset you display by pressing F18.

All option numbers from 1 through 99 are valid. You can assign numbers to individual tasks by entering numbers in the *Option* column, or remove tasks by replacing the numbers with blanks.

Press Enter when you have finished.

Using Personal Menus

When you have created your own personal menu, you can access it as follows:

- On any APD/400 or application menu, type the name of your user profile on the command line, and press Enter. If the name of your user profile is USER, type USER.
- If another menu of the same name already exists, either in the current application (the application to which the active menu belongs) or in APD/400, that menu is displayed. In this case, name your personal menu APD+/USER, because all personal menus belong to the APD+ application.

APD+ is a special application ID used to access your personal menu.

 If you want your personal menu to be your initial menu, press F23 while your personal menu is displayed on the screen. After you have done this, your personal menu appears first whenever you sign on to APD/400.

Scheduling Batch Jobs

In APD/400, users can run batch jobs. Batch jobs run in the background without user interaction, so that you can continue working while batch processing is going on.

When a task is designed to run as a batch job, select the required option, or enter the expert code on an APD/400 menu. Your application administrator or application developer has already determined the order and contents of APD/400 displays that appear next.

Note: Your screen may not display all items described here.

If a job is to run more than once, you can also specify the name of a timetable, and the date when you want the recurring job to run for the last time.

Submitting Batch Jobs

When you select a batch task from a menu or by entering the expert code, the Schedule a Batch Job display appears.

Depending on what the administrator specified when the task was created, this display is sometimes informational only. Values that you are allowed to change are displayed in input fields. If F10 (Using a timetable) is available on the display, you can run the task as a recurring batch job.

```
PAY/SALESFIG
                    Schedule a Batch Job
You are about to schedule the following batch job:
Installation . . . :
                                Default Installation
Application . . . : PAYROLL
                                Payrol1
Task . . . . . : SALESFIG
                                Sales figures
Override the schedule parameters if required, press Enter.
 Start date . . . . . . . . . 1993-03-19
 Start time . . . . . . . . . . . 18:17
                                              HH:MM
 Batch environment . . . . . .
                                              F4 for list
                                                                     More...
F3=Exit F4=List F5=Refresh F10=Using a timetable F12=Cancel
```

Figure 21. Schedule a Batch Job (Page 1)

Figure 21 is an example of a Schedule a Batch Job display. Fields on this display provide the following information:

Start date	Current date.	If this is an input field	vou can change the

displayed value.

Start time Current time or a time specified by the application

administrator. If this is an input field, you can change the

displayed value.

Batch environment Usually the name of an APD/400 environment. If this is an

input field and you have special requirements, (for example, you want your output to be printed on a specific printer, or the

job to run faster than usual), you can specify a batch

environment.

If the *Start date* and *Start time* fields are input fields on the display, you can press F10 (Using a timetable) to run this task as a recurring batch job (see "Running a Recurring Job" on page 32).

The batch job is scheduled when you press Enter.

If More... is visible in the lower right-hand corner, press the Page Down key to reach the second page of Schedule a Batch Job, on which you can specify parameters for program tasks.

Note: You may see a display that is not part of APD/400, but of an application program. If so, see the description of that application for details.

Figure 22 on page 31 shows an example of page 2 of Schedule a Batch Job.

Figure 23. Schedule a Batch Job (Page 2, Alternate View)

Figure 23 is an example of the alternate view of page 2 of the Schedule a Batch Job display. On this display, provide the following information:

Parameter Specify a parameter value. The value you enter here is not defined by APD/400, but by the program that is run as a batch job or a task on a process list. See the description of that program for details.

Press Enter to submit the job.

Running a Recurring Job

If you want to run a batch job more than once, at specific times, or on specific dates, press F10 (Using a timetable) on the first page of Schedule a Batch Job. APD/400 then displays two additional input fields, as shown in Figure 24 on page 33.

PAY/SALESFIG Schedule a Batch Job You are about to schedule the following batch job: Installation . . . : Default Installation Application . . . : PAYROLL Payrol1 Task : SALESFIG Sales Figures Override the schedule parameters if required, press Enter. F3=Exit F4=List F5=Refresh F10=Resolve timetable F12=Cancel

Figure 24. Schedule a Batch Job (for a Recurring Job)

Enter information in the following two fields:

Timetable Specify the name of an existing timetable for the recurring batch job. If you do not specify a timetable, the job is run only once.

End date Specify the date when you want the batch job to run for the last time.

Use the date format displayed at the right of the field.

Press F10 (Resolve timetable) to see the actual dates and times when your recurring job will run, according to the timetable you have specified.

Figure 25. Display Resolved Timetable Entries

Figure 25 shows an example of Display Resolved Timetable Entries.

See "Scheduling Batch Jobs" on page 29 for a description of how to continue working when you return to page 1 of Schedule a Batch Job.

Working with Scheduled Jobs

You can examine the batch jobs you have scheduled and, where necessary, change a scheduled job using the Work with Scheduled Batch Jobs display.

To use this function, select option 6 (Work with Scheduled Batch Jobs) from the Service Functions menu, or enter expert code WRKSCDJOB to produce the Work with Scheduled Batch Jobs display, as shown in Figure 26 on page 35.

```

Figure 27. Work with Scheduled Batch Jobs (View 2)

Note: You can press F10 to display a list of batch jobs scheduled outside APD/400. For details, see "Checking Other Batch Jobs" on page 38.

Changing Scheduled Batch Jobs

To change a scheduled batch job, type 2 in the Option column. You can change batch jobs with RDY (Ready), REC (Recurring), or HLD (Held) status only.

You see the Change Scheduled Batch Job display when you are about to change a recurring batch job. If you are changing a recurring batch job (a batch job with a timetable defined for it), the parameters for recurring jobs (Timetable and End date) are displayed automatically. Otherwise, you must press F10 to see the parameters for recurring jobs.

```

Figure 28. Change Scheduled Batch Job

Figure 28 shows an example of the Change Scheduled Batch Job display.

Specify the required changes. Press Enter to confirm the changes, or F10 (Resolve timetable) if you are changing a recurring batch job.

Note: A changed job is marked *CHG on the Work with Scheduled Batch Jobs display.

Deleting Scheduled Batch Jobs

To delete a scheduled batch job, type 4 in the *Option* column next to that job on the Work with Scheduled Batch Jobs display. Press Enter to confirm that you want to delete the batch job, or press F3 or F12 to cancel the delete operation. A deleted entry is marked *DLT on the Work with Scheduled Batch Jobs display. You cannot delete batch jobs with SBM (Submitted), ACT (Active), or RST (Restartable) status.

Holding and Releasing Scheduled Batch Jobs

On the Work with Scheduled Batch Jobs display, you can hold a batch job to prevent it from being processed at the specified date and time. Place the cursor on the batch job you want to hold, and specify option 3 (Hold). Held entries are marked *HLD.

Note: You can hold batch jobs with RDY (Ready) or REC (Recurring) status only.

On the Work with Scheduled Batch Jobs display, you can also release a held batch job so that it can run at the specified date and time. If that time and date is already in the past when you release the job, APD/400 processes the job immediately. Place the cursor on the batch job you want to release, and specify option 6 (Release). Released entries are marked *RLS.

Note: You can release batch jobs with HLD (Held) status only.

Checking Other Batch Jobs

While working with scheduled batch jobs, you can also check the status of batch jobs that are not controlled by APD/400. Press F10 (Other jobs) on the Work with Scheduled Batch Jobs display to see all current batch jobs that are not under APD/400 control. Display Batch Jobs shows a list of all jobs running in batch mode that have not been scheduled and submitted by APD/400.

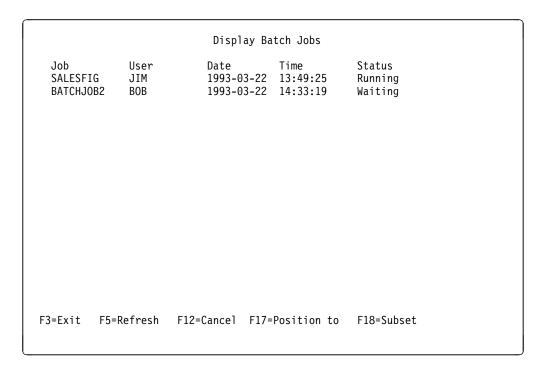

Figure 29. Display Batch Jobs

Figure 29 is an example of the Display Batch Jobs display, which shows current jobs outside APD/400. These jobs are displayed to give you an overview of the batch situation. You cannot change anything about these jobs. Fields on this display provide the following information:

Job Name of the job as it is known on AS/400.

User ID of the user who created the job. You see a list of all jobs under your user ID. To see jobs of other users, press F18 (Subset) to select those users from the Select Batch Jobs display.

Date Date on which the job was created.

Time Time when the job was created.

Status Current status of the job.

Press F18 (Subset) on the Display Batch Jobs display to produce Select Batch Jobs, as shown in Figure 30 on page 39.

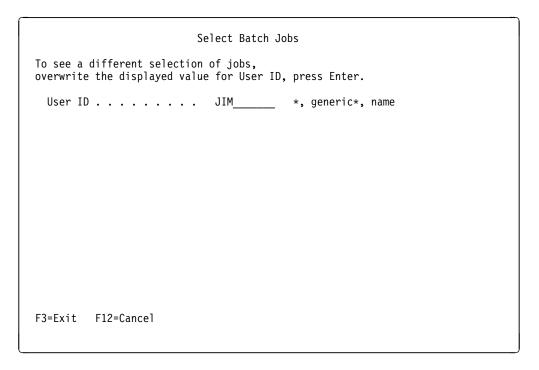

Figure 30. Select Batch Jobs

Figure 30 shows the Select Batch Jobs display, from which you can view batch jobs running under user IDs other than your own.

Enter the following information:

User ID Specify the user or users whose batch jobs you want to see on the Display Batch Jobs display, and press Enter.

Working with Canceled Jobs

When a job has been canceled due to an interruption or an AS/400 system failure, the AS/400 system indicates that a restart is pending. Work with Canceled Jobs is displayed directly after sign-on when restarts are pending.

You can also select option 7 (Work with Canceled Jobs) from the Service Functions menu, or enter expert code WRKCNLJOB to produce the Work with Canceled Jobs display.

Note: In restart situations, ask your administrator what caused the abnormal stop, and whether or not that condition still exists.

Remember the following:

- Only the submitting user or the administrator is authorized to restart or delete a failed job.
- Failed jobs are shown on the Work with Canceled Jobs display, but only the failed jobs that you started. However, you can press F18 (Subset) to see failed jobs of other users. When you have pressed F18 (Subset), type the ID of a specific user to see the failed jobs of that user. Type an asterisk (*) to see the failed jobs of all users.
- Entries on the Work with Canceled Jobs display are sorted by user ID.

```

Figure 31. Work with Canceled Jobs

Figure 31 shows an example of a Work with Canceled Jobs display. Fields on this display are as follows:

Type one of the following options in the *Option* column: Option 1 = Select (to restart canceled interactive jobs) 4 = Delete (not valid for restart type M) 5 = Display 6 = Release (to restart canceled batch jobs) User ID of the user who submitted the canceled job Expert code of the canceled job Expert code Application ID of the application to which the canceled job belongs Inst. ID of the installation on which the canceled job is scheduled Processing type I Interactive task IL Interactive process list Batch task Y Normal restart control Restart type Mandatory restart

Restarting Canceled Jobs

You can restart both interactive and batch jobs that have been canceled. Proceed as described in the following.

Interactive Jobs

To restart a canceled interactive job, select that job on the Work with Canceled Jobs display. Type 1 in the *Option* column next to that job, and press Enter.

If you are the user who originally started the canceled job, the job is restarted and APD/400 returns to the interrupted task.

Batch Jobs

To restart a canceled batch job, release the job on the Work with Canceled Jobs display. Type 6 in the *Option* column next to that job, and press Enter to produce the Release Canceled Batch Job display.

```
PAY/SALESFIG Release Canceled Batch Job

Installation . . . : Default Installation
Application . . . : PAYROLL Payroll
Expert Code . . . : SALESFIG Sales Figures

Type choices, press Enter.

Start date . . . . . 30.01.1993 DD.MM.YYYY

Start time . . . . . 14:32 HH:MM
```

Figure 32. Release Canceled Batch Job

Figure 32 shows an example of the Release Canceled Batch Job display. Fields on this display are as follows:

Start date You can change the restart date of a canceled job by entering any valid date. If you specify a date prior to the current date, APD/400 restarts the job immediately.

Start time You can change the restart time of a canceled batch job by entering any valid time.

Press Enter to restart the job. Restarted entries are marked *RLS on the Work with Canceled Jobs display.

Deleting Canceled Jobs

To delete a canceled job, type 4 in the Option column next to that job on the Work with Canceled Jobs display, and press Enter.

All deleted jobs are marked *DLT on the Work with Canceled Jobs display. To remove those deleted jobs from the batch system, you must now delete them from the list of jobs on the Work with Scheduled Jobs display. All deleted jobs are marked *CNL on the Work with Scheduled Jobs display.

Displaying the State of the Batch System

When you are informed that a job you submitted to the APD/400 Batch System did not run at the scheduled time or did not start when you submitted it to run immediately, you can check whether or not the APD/400 batch system is active.

To display the state of APD/400 batch system, select option 9 (Work with APD/400 Batch System) from the Service Functions menu, or enter expert code WRKMONSTS.

Figure 33 shows an example of the Work with APD/400 Batch System display.

```
APD/WRKMONSTS
                        Work with APD/400 Batch System
Number of jobs activated by the APD/400 Batch System:
 Jobs that are currently active . . . . . :
 Jobs that are waiting on the job queue . . : 0001
Current state of the APD/400 Batch System . . : 1 Active
Specify the requested state of the APD/400 Batch System, press Enter.
 Requested state of the APD/400 Batch System . .
                                                                Active
                                                                Not activating
                                                               Hold.
                                                               Hold, no locks
                                                               Down
F3=Exit F5=Refresh
                      F12=Cancel
```

Figure 33. Work with APD/400 Batch System

Note: You may not be able to change the state of the batch system. If you try to specify another state on the display, an error message appears explaining that you are not authorized to change the state of the APD/400 monitor.

The normal state of the APD/400 Batch System is Active. Contact your APD/400 administrator if the state is anything other than Active, and you want to run batch jobs, or if the state of the APD/400 Batch System says Active, and your jobs have not started.

Chapter 5. Maintaining Multiple APD/400 Tasks

You can switch between tasks in one application, or between tasks in different applications. To do this, press the Attention key on any display or menu to produce the Transfer to an Interrupted Task display.

You can start a new task from the Transfer to an Interrupted Task display. Whenever you add a new task, APD/400 is started again.

The number of tasks that can run simultaneously is determined by the APD_GROUPJOBS_MAXIMUM system parameter. The APD/400 administrator regulates this parameter. Refer to the *IBM Application Program Driver/400 Version 3: Administrator's Guide* for detailed information about this parameter.

If you need to start new group jobs while the maximum number of group jobs is active, either ask your APD/400 administrator to change the system parameter, or delete tasks that are no longer needed, as described in "Deleting a Task" on page 45.

When you press the Attention key for the first time, the display shows the last task you were using as the only selectable option.

For example, if you press the Attention key while using the Administer Personal Menu display, a menu option for that task is shown on the Transfer to an Interrupted Task display.

Figure 34 shows an example of a Transfer to an Interrupted Task display.

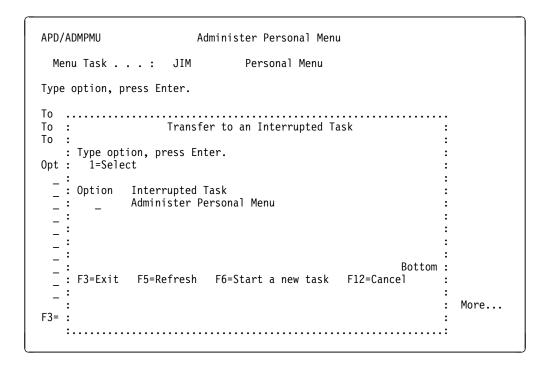

Figure 34. Transfer to an Interrupted Task (Example 1)

© Copyright IBM Corp. 1988, 1995

Adding a Task

Press F6 on this display to start a new task. The APD/400 main menu or your initial menu (if you have defined one) appears, and from there you can either enter the expert code or work through the menus to select the second task you want to process.

For example, if you are now using the Work with Scheduled Batch Jobs display, you would see that menu option below the Administer Personal Menu option on the Transfer to an Interrupted Task display, as shown in Figure 35.

You can now press F6 to add another task to this menu, or you can select one of the existing tasks to continue your work.

Selecting an Interrupted Task

If you press the Attention key again while processing a second task, you see your original task and your second task on the Transfer to an Interrupted Task display.

To return to an interrupted task, select that task from the Transfer to an Interrupted Task display. To do this, type 1 in the *Option* column next to that task, and press Enter.

Figure 35. Transfer to an Interrupted Task (Example 2)

Deleting a Task

To delete a task, do the following:

- 1. Select the task you want to delete from the Transfer to an Interrupted Task display.
- 2. Go to the APD/400 main menu by doing one of the following:
 - Enter expert code MAIN on the command line of any menu.
 - Press F3 as often as necessary to return to the main menu.
- 3. Select option 90 (End Task) on the APD/400 main menu to delete the task.

You can also delete a task by entering expert code SIGNOFF on any menu screen.

When you delete a task, you return to the last active task before control transferred to the delete operation. When you press the Attention key again, you see that the task just deleted is no longer shown on the Transfer to an Interrupted Task display.

When you try to delete the last or only task, a confirmation display appears. You must indicate whether or not you really want to leave APD/400, otherwise the APD/400 task resumes.

Appendix A. Pull-Down Menus

This appendix shows sample layouts of pull-down menus available from the menu bar on the APD/400 main menu.

Activating Pull-Down Menus

To produce a pull-down menu, press F10 (Action) and place the cursor on the menu bar choice, or move the cursor with the tabulator key or arrow key to the menu bar choice, and press Enter. To leave a pull-down menu, press F10 (Action), or F12 (Cancel).

Options on Pull-Down Menus

To select an option from a pull-down menu, type the number of that option in the option field. It is not necessary to press Enter.

You can also place the cursor on the menu option you want to select, and press Enter.

Pull-Down Menu for Options

Figure 36 shows the pull-down menu that appears when you select Options from the menu bar. This pull-down menu contains settings for an individual user.

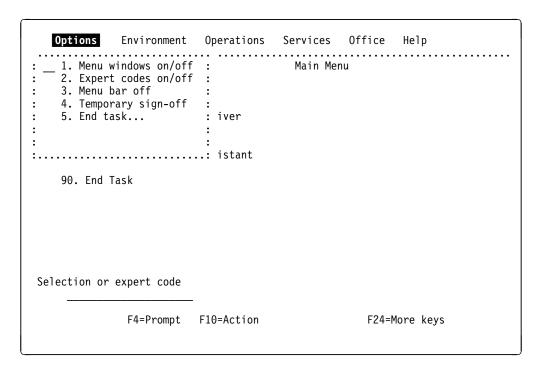

Figure 36. Pull-Down Menu (Options)

© Copyright IBM Corp. 1988, 1995

The following options are available on the Options pull-down menu:

1. Menu windows on/off

Select option 1 switch menu windows either on or off. The switch is effective immediately.

2. Expert codes on/off

Select option 2 to reveal expert codes, or to conceal them.

3. Menu bar off

Select option 3 to switch menu bars off. You must leave APD/400 using End Task, and start APD/400 again to make the switch effective.

4. Temporary sign-off

Select option 4 to leave APD/400 temporarily.

5. End task...

Select option 5 to leave APD/400. The Exit APD/400 confirmation window appears.

Pull-Down Menu for Environment

Figure 37 shows the pull-down menu that appears when you select Environment from the menu bar. Use this pull-down menu to change the environment in which the application is running.

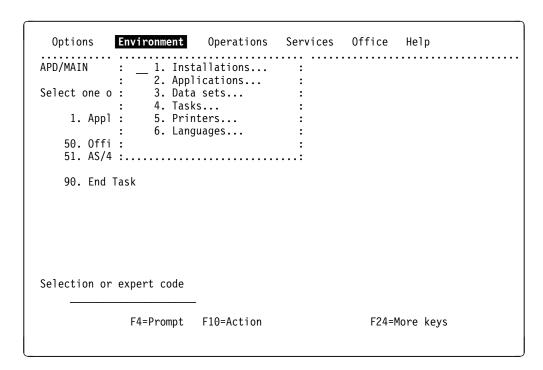

Figure 37. Pull-Down Menu (Environment)

The following options are available on the Environment pull-down menu:

1. Installations...

Select option 1 to work on another installation, as described in "Selecting an Installation" on page 21.

2. Applications...

Select option 2 to display the main menu of the current installation.

3. Data sets...

Select option 3 to use another data set, as described in "Selecting a Data Set" on page 22.

4. Tasks...

Select option 4 to display the expert codes of all tasks you are authorized to process.

5. Printers...

Select option 5 to specify a printer, as described in "Selecting a Printer Environment" on page 23.

6. Languages...

Select option 6 to specify a language priority list, as described in "Selecting Languages" on page 26.

Pull-Down Menu for Operations

Figure 38 shows the pull-down menu that appears when you select <code>Operations</code> from the menu bar. Use this pull-down to select from a subset of APD/400 tasks that provide OS/400 operations.

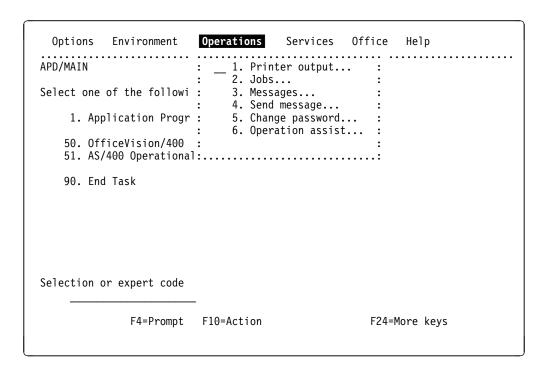

Figure 38. Pull-Down Menu (Operations)

The following options are available on the Operations pull-down menu:

1. Printer output...

Select option 1 to go directly to the OS/400 Work with All Spooled Files display.

2. Jobs...

Select option 2 to go directly to the OS/400 Work with User Jobs display.

Messages...

Select option 3 to go directly to the OS/400 Display Messages display.

4. Send messages...

Select option 4 to go directly to the OS/400 Display Program Message display.

5. Change password...

Select option 5 to change your OS/400 password.

6. Operation assist...

Select option 6 to produce the OS/400 Operational Assistant (TM) Menu. The Operational Assistant* menu offers the same options as numbers 1 - 5 on the Operations pull-down menu, and the Information and Problem Handling option.

When you leave any OS/400 display you reached through the <code>Operations</code> pull-down menu, you return to the command line of the controlling APD/400 menu, and not to the menu bar.

Pull-Down Menu for Services

Figure 39 shows the pull-down menu that appears when you select Services from the menu bar. Use this pull-down menu to access APD/400 tasks that manage the user's environment and the APD batch system.

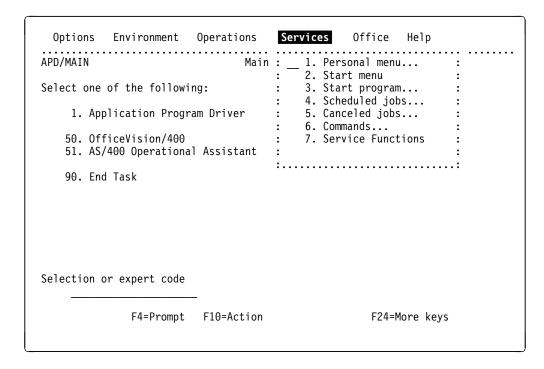

Figure 39. Pull-Down Menu (Services)

The following options are available on the Services pull-down menu:

1. Personal menu...

Select option 1 to administer your personal menu, as described in "Creating Your Own Personal Menu" on page 28.

2. Start menu...

Select option 2 to set an initial menu, as described in "Using Personal Menus" on page 29.

3. Start program...

Select option 3 to specify a start program to run when you sign on to APD/400, as described in "Selecting a Start Program" on page 24.

4. Scheduled jobs...

Select option 4 to work with scheduled jobs, as described in "Working with Scheduled Jobs" on page 34.

5. Canceled jobs...

Select option 5 to work with canceled jobs, as described in "Working with Canceled Jobs" on page 39.

6. Commands...

Select option 6 to produce the AS/400 Command window, in which you can press F4 (Prompt) for a list of commands, F9 (Retrieve) to bring back previous commands, or F12 (Cancel) to leave the window.

7. Service Functions...

Select option 7 to produce the Service Functions menu, which consists of

Pull-Down Menu for Office

Figure 40 on page 52 shows the pull-down menu that appears when you select Office from the menu bar. Use this pull-down menu to access APD/400 tasks for Office. These APD/400 tasks process only OfficeVision/400 commands.

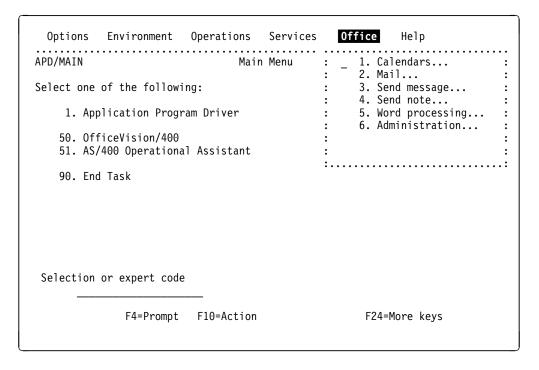

Figure 40. Pull-Down Menu (Office)

The following options, available on the Office pull-down menu, are described in the relevant OfficeVision/400 documentation:

Calendars...

See the description of the STROFC (1) command program.

2. Mail...

See the description of the STROFC (2) command program.

Send message...

See the description of the STROFC (3) command program.

4. Send note...

See the description of the STROFC (4) command program.

5. Word processing...

See the description of the STRWP program.

6. Administration

See the description of the STROFC (9) command program.

Pull-Down Menu for Help

Figure 41 shows the pull-down menu that appears when you select Help from the menu bar. Use the functions on this pull-down menu to receive additional user information.

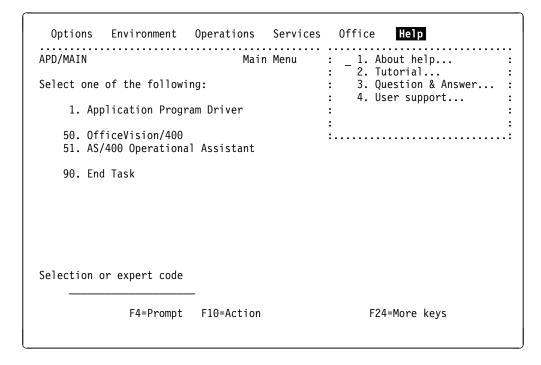

Figure 41. Pull-Down Menu (Help)

The following options are available on the Help pull-down menu.

- 1. About help...
 - Select option 1 to find out how and where to find specific help information.
- 2. Tutorial...
 - Select option 2 to start the online tutorial session.
- 3. Question & Answer...
 - Select option 3 to produce the Question & Answer (Q & A) menu, from which you can select any Q & A task for which you are authorized.
- 4. User support...
 - Select option 4 to access the user support and education menu.

For information on maintaining menu bars and pull-down menus, refer to the relevant chapters in the *IBM Application Program Driver/400 Version 3: Administrator's Guide.*

Appendix B. Menu Window Cascades

You can activate menu windows one after the other while you are working. This causes a cascade of windows.

There are four positions for windows in a cascade. If a fifth menu in the sequence is requested, that menu overlays the menu window in position number 1, and so on. The number of overlaying menu windows is unlimited.

When you are using menu windows with a menu bar, remember the following:

- A displayed menu bar always belongs to the current full-screen menu.
- When you are using a menu window with its own menu bar, you can produce that menu bar in one of two ways:
 - Press F23 (Set initial menu) to set the menu that is currently displayed in a window as your initial menu. An initial menu is always displayed in full-screen mode.
 - Ask your application administrator to change the display mode of the menu from window to full screen.

In this appendix, you can see examples of cascaded menu windows on displays both with and without menu bars.

Menu Window Cascade with a Menu Bar

The following examples show how menu windows cascade on a display with a menu bar. Figure 42 shows a cascade of two menu windows on a display with a menu bar.

Glossary of Terms and Abbreviations

This glossary defines terms used in the APD/400 library.

Α

AIP. Application interface program.

application. A program used to perform a particular data processing task, such as inventory control or payroll.

application interface program (AIP). A functional interface used by APD/400 to invoke the corresponding application.

API. Application program interface.

application program interface (API). A functional interface that allows an application program written in a high- or low-level language to use specific data or functions of APD/400.

authorization. The process of giving a user either complete or restricted access to an object, resource, or function.

authorization list. Authorization lists are used to protect menus, menu options, installations, and data sets from unauthorized access. An authorization list consists of a 10-digit authorization list name and a list of authorization list entries, each of which is comprised of a user name and an authority level.

В

back up. To save some or all of the objects on a system to a tape or diskette, for safe keeping.

backup. (1) Pertaining to an alternative copy used as a substitute if the original is lost or destroyed, such as a backup log. (2) The act of saving some or all of the objects on a system to a tape, diskette, or save file. (3) The tapes, diskettes, or save files with the saved objects.

Batch Monitor Program (BMP). The program used by APD/400 to control batch jobs.

batch processing. A method of running a program or a series of programs in which one or more records (a batch) are processed with little or no action from the user or operator. Contrast with *interactive processing*.

BMP. Batch Monitor Program.

C

CL. control language

command. A statement used to request a function of the system. A command consists of the command name abbreviation, which identifies the requested function, and its parameters.

Common User Access (CUA). Pertaining to a Systems Application Architecture (SAA) specification that gives a series of guidelines describing the way information should be displayed on a screen, and the interaction techniques between users and computers.

control language. The set of all commands with which a user requests system functions.

control record. The description of a save operation for libraries and folders. Record details include the save cycle, the number of generations to be stored, the medium, and the starting date.

CUA. Common User Access.

D

data description specifications (DDS). A description of the user's database or device files that is entered into the system in a fixed form. The description is then used to create files.

data set. A data environment contained within an application. For applications that are multi-data set enabled, data sets could be used for different departments or clients.

DBCS. Double-byte character set.

DDS. Data description specifications.

default. A value that is automatically supplied or assumed by the system or program when no value is specified by the user.

DLO. Document library object.

document library object (DLO). Any system object that resides in the document library, such as RFT and FFT documents, folders, and PC files.

double-byte character set (DBCS). A set of characters in which each character is represented by 2 bytes. Languages such as Japanese, Chinese, and Korean, which contain more symbols than can be represented by 256 code points, require double-byte

© Copyright IBM Corp. 1988, 1995

character sets. Because each character requires 2 bytes, the typing, displaying, and printing of DBCS characters requires hardware and programs that support DBCS.

Ε

exclusion. An exclusion defines which programs cannot be active simultaneously in an application.

exclusion list. An exclusion list combines tasks into groups. Defining exclusion lists saves the work of specifying each program for exclusions. Programs with identical exclusion characteristics can be combined in exclusion lists. An exclusion list can be either a function list or an object list.

expert code. A command or abbreviation used to invoke a menu or program. Entering an expert code allows the user to access a menu, task, or program directly (without calling intermediate menus), as well as to switch between applications without signing off and on. Pressing F4 on a menu screen displays a list of all expert codes for which the user is authorized.

F

folder. A directory for documents. A folder is used to group related documents and to find documents by name. The system-recognized identifier for the object type is *FLR. Compare with *library*.

function key. A keyboard key that allows the user to select keyboard functions or programmer functions. The keys available are displayed in line 23 of the screen display.

Н

help function. Pressing either the Help key or F1 on a display provides information on a specific part of that display or the whole display, depending on the position of the cursor. If the cursor is located on a message, second-level text for that message is displayed.

high-level language. A programming language, such as RPG, BASIC, PL/I, Pascal, COBOL, and C used to write computer programs.

HLL. High-level language

ı

IBM SAA OfficeVision/400 Version 3. The IBM licensed program that allows users to prepare, send, and receive mail; schedule items on calendars; maintain directories of names and addresses; file and retrieve documents; and create and maintain distribution lists. SAA OfficeVision/400 also provides word processing functions and the capability to work on behalf of other users

initial menu. The first menu displayed after sign-on. Each user can set a personal initial menu. Pressing F23 on a menu labels it as the initial menu for the user.

installation. A specific processing environment containing applications and data sets. For example, different installations could be used for test and production environments.

interactive processing. A processing method in which each operator action causes a response from the program or the system. Contrast with *batch processing*.

J

job. (1) A unit of work to be done by a computer.(2) In the SAA OfficeVision/400 calendar function, an item that schedules a control language (CL) command to run at any date or time.

journal. A system object that identifies the objects being journaled, the current journal receiver, and all the journal receivers on the system for the journal. The system-recognized identifier for the object is *JRN.

journal receiver. A system object that contains journal entries added when changes are made to an object, for example, when an update is made to a file being journaled. The object type is *JRNRCV.

journaling. The process of recording, in a journal, the changes made to a physical file member.

L

language priority list. In APD/400, a list of available languages ranked in order of a user's preference, to enable the use of an application in one of the preferred languages. Number 1 on the priority list is the user's most preferred language.

library. A system object that serves as a directory to other objects. A library groups related objects, and allows the user to find objects by name. The system-recognized identifier for the object type is *LIB. Compare with *folder*.

library list. A list that indicates which libraries are to be searched and the order in which they are to be searched. The system-recognized identifier is *LIBL.

library name template. Naming conventions used in combination with the installation and data set IDs to resolve a library name during installation of an application that supports multiple installations or multiple data sets.

local data area. A 1024-byte data area that can be used to pass information between programs in a job. A separate local data area is automatically created for each job.

M

menu. A displayed list of items from which a user can make a selection. The system-recognized identifier for the object type is *MENU.

menu bar. The area containing keywords at the top of a display that gives a user access to actions available for that display. After a user requests a choice in the menu bar, a pull-down menu is shown below the menu bar.

message. A communication sent by the AS/400 system or APD/400, and displayed either on line 24 of the screen or in window format.

MNCS. Multinational character set.

More. When displays and menus comprise several pages, More... is displayed at the bottom of all screens except the last one.

Position your cursor on the display, or message line, and press F8. You can continue to do this until the word Bottom is displayed.

multilingual support. Support that includes more than one national language on a system. See also *National Language Support*.

multinational character set (MNCS). A set of graphic characters that support the languages within a specific language group.

Ν

National Language Support (NLS). The ability for a user to communicate with hardware and software products in a language of choice to obtain results that are culturally acceptable. See also *multilingual support*.

NLS. National Language Support.

0

object. A named storage space that consists of a set of characteristics that describe itself and, in some cases, data. An object is anything that exists in and occupies space in storage, and on which operations can be performed. Some examples of objects are programs, files, libraries, and folders.

OfficeVision. See *IBM SAA OfficeVision/400 Version 3*.

Operational Assistant. Pertaining to a part of the operating system that provides a set of menus and displays for end users to do commonly performed tasks, such as working with printer output, messages, and batch jobs.

output queue. An object that contains a list of spooled files to be written onto an output device, such as a printer or a diskette. The system-recognized identifier for the object type is *OUTQ.

P

parameter. A value supplied to a command or program that is used either as input, or to control the actions of the command or program.

process list. A list of program or command tasks that are automatically processed in sequence. The last entry can be a menu. A process list is a special type of menu in which all tasks are activated. Only when the last task has been processed is control returned to the previous menu or the menu at the end of the process list.

program. A sequence of instructions that a computer can interpret and run.

pull-down menu. An extension of the menu bar that displays a list of available choices for a choice selected by a user in the menu bar. After a user selects a choice in the menu bar, the pull-down menu is shown.

Q

queue. A list of messages, jobs, files, or requests waiting to be read.

R

restart. The action necessary when a batch job has failed to run as scheduled.

restore. To copy data from tape, diskette, or a save file into auxiliary storage. Contrast with *save*.

S

SAA. Systems Application Architecture.

save. To copy specific objects, libraries, or data by transferring them from main storage or auxiliary storage to a media such as tape, diskette, or a save file. Contrast with restore.

scheduled job. A batch job that becomes eligible to run at a specified date and time.

scroll. To move a display image vertically or horizontally to view data that cannot be seen within the boundaries of the displayed screen.

SEU. Source entry utility.

source entry utility (SEU). A function of the AS/400 Application Development Tools licensed program that is used to create and change source members.

spooled file. A file that holds output data waiting to be processed, such as information waiting to be printed.

start program. A program defined by a user to run at sign-on time.

symbolic library name. A name given to represent a library in an application that supports multiple installations or multiple data sets. A symbolic library name is used in conjunction with a library name template.

Systems Application Architecture (SAA). Pertaining to an architecture defining a set of rules for designing a common user interface, programming interface, application programs, and communications support for strategic operating systems such as the OS/2, OS/400. VM/370, and MVS/370 operating systems.

Т

tape cartridge. A case containing a reel of magnetic tape that can be put into a tape unit without stringing the tape between reels.

tape drive. A device used to move the tape, and read and write information on magnetic tapes.

task. A basic unit of work to be performed. In APD/400 there are six task types:

- Command
- Menu
- Menu bar
- · Process list
- Program

• Pull-down.

textual data. The collective term for menus, displays, lists, prompts, options, online help information, and messages.

timetable. A schedule showing a planned order or sequence, used in APD/400 to determine when to run a recurring batch job.

toggle. Pertaining to a switching device, such as a toggle key on a keyboard that allows a user to switch between two types of operations. For example, in APD/400 you can press F11 to display expert codes, and press the key again to return to the original screen display.

U

UIM. User Interface Manager.

user exit. A program routine given control by APD/400 to enhance services provided by APD/400 functions.

user identification (user ID). The name used to associate the user profile with a user when the user signs on the system.

User Interface Manager (UIM). A function of the operating system that provides a consistent user interface by providing comprehensive support for defining and running panels (displays), dialogs, and online help information.

user password. A unique string of characters that a system user enters to identify that user to the system, if the system resources are secured.

user profile. An object with a unique name that contains the user's password, the list of special authorities assigned to the user, and the objects the user owns. The system-recognized identifier for the object type is *USRPRF.

value. Data (numbers or character strings) entered in an entry field, and data supplied in parameters of CL commands.

W

window. A part of the display screen with visible boundaries in which information is displayed. For example, in APD/400 when F17 (Position to) is pressed (where applicable), the Position the List window is displayed over the current display.
